Table of contents

Chapter 1 Motivation 31
1.1 Problem statement 33
1.1.1 Model-driven development and model-based engineering 33
1.1.2 Why a traceability-based method 35
1.2 Research methodology 37
1.2.1 Research goals and research questions 40
1.2.2 Engineering, design and empirical cycles 43
1.3 Means to achieve the main research goal 46
1.4 The TraceME method in a nutshell 46
1.5 Outline of the thesis 48

Chapter 2 Related Work 51
2.1 Motivation 51
2.2 Traceability in conceptual model evolution 52
2.3 Measuring conceptual models evolution 55
2.4 Model-driven organisational reengineering frameworks 60
2.5 Goal-driven requirements engineering 63
2.6 Evolution requirements and information system co-evolution 65
2.7 Reengineering solutions before this thesis in the PROS research centre 66
2.8 Summary 78

Chapter 3 Theoretical Framework 81
3.1 Motivation 81
3.2 The basics 82
3.3 A theoretical framework for the model-driven development 83
3.4 A theoretical framework for organisational reengineering 88
3.5 Summary 91

Chapter 4 TraceME chunks: the design 93
4.1 Introduction 93
4.2 Background and running example 95
4.2.1 The *i** framework in a nutshell 95
4.2.2 The Communication Analysis method in a nutshell 96

4.3 The GoBIS framework 98
4.3.1 Research Methodology 99
4.3.2 Modelling language integration 100
4.3.3 Ontological mapping between *i** and CA 101
4.3.4 Metamodel integration: the GoBIS metamodel 105
4.4 iStar2ca guidelines: top-down scenario guidelines 107
4.5 evolCA procedure: evolution scenario procedure 113
4.6 ca2oom integration framework 143
4.7 Delta analysis 156
4.7.1 Delta models specification 159
4.7.2 Delta models measurement 165
4.7.3 Delta models and metrics interpretation report 182
4.7.4 Delta analysis metamodel 184
4.8 Summary 185

Chapter 5 The TraceME method 187
5.1 Motivation 187
5.2 The TraceME method: the construction 188
5.3 A method engineering effort to construct TraceME 190
5.4 The TraceME Method 194
5.4.1 Introduction 194
5.4.2 Perspective 203
5.4.3 Framework 204
5.4.4 Cooperation principles 209
5.5 Method chunk iStar2ca guidelines 210
5.5.1 Concepts 211
5.5.2 Procedure 213
5.5.3 Notation 221
5.6 Method chunk ca2oom integration framework 223
5.6.1 Concepts 224
5.6.2 Procedure 224
5.6.3 Notation 233
5.7 Method chunk evolCA procedure 234
5.7.1 Concepts 235
5.7.2 Procedure 236
5.7.3 Notation 242
5.8 Method chunk Delta Analysis 243
5.8.1 Concepts 244
5.8.2 Procedure 245

5.8.3 Notation 258
5.9 Situational-oriented assembling of the TraceME chunks 259
5.10 Summary 261

Chapter 6 TraceME validation 263
6.1 Introduction 263
6.2 Validation of the iStar2ca guidelines – a laboratory demonstration and a comparative experiment 265
6.2.1 Laboratory demonstration 265
6.2.2 Comparative experiment 267
6.3 Validation of the Delta Analysis technique: Action research experience in everis Spain 290
6.3.1 Design of the action research in everis 293
6.3.2 Discussion 320
6.4 Validation of the ca2oom integration framework: an experiment for sensitive analysis 322
6.4.1 Experimental design 323
6.4.2 Experimental procedure 327
6.4.3 Conclusions and lessons learnt 339
6.5 Validation of the evolCA procedure: A feasibility analysis 340
6.5.1 Design and procedure 340
6.5.2 Conclusions and lessons learnt 341
6.6 Summary 342

Chapter 7 Tool support 345
7.1 Introduction 345
7.2 The GREAT Process Modeller 346
7.3 Plug-in for the GoBIS framework 348
7.4 Plug-in the Delta Analysis technique 351
7.5 Summary 352

Chapter 8 Final discussion 353
8.1 Contributions 353
8.2 Thesis impact 356
8.2.1 Publications 356
8.2.2 Academic projects 360
8.2.3 Collaborations and research stays 361
8.3 Participation in the requirements engineering community 362
8.4 Short and middle term future projects 363
