ACKNOWLEDGEMENTS ..... **VI**

ABSTRACT ..... **VIII**

RESUMEN ..... **X**

RESUM ..... **XII**

LIST OF ACRONYMS ..... **XXI**

LIST OF SYMBOLS ..... **XXII**

CHAPTER 1. INTRODUCTION **25**

1.1. Background: Radiofrequency ablation (RFA) 25

1.1.1. RFA modes *26*

1.1.2. Electrode design *28*

1.1.3. Clinical applications *29*

1.1.3.a. RF cardiac ablation *29*

1.1.3.b. RF-assisted hepatic resection *34*

1.1.3.c. RF heating of subcutaneous adipose tissue *37*

1.2. Objectives and Organization 41

CHAPTER 2. MATHEMATICAL MODELING OF EPICARDIAL RF ABLATION OF ATRIAL TISSUE WITH OVERLYING EPICARDIAL FAT **46**

2.1. Abstract 46

2.2. Introduction 47

2.3. Methods 48

2.3.1. Description of the theoretical model *48*

2.3.2. Governing equations *49*

2.3.3. Characteristics of model elements *50*

2.3.4. Boundary and initial conditions *51*

2.3.5. Construction of the numerical model *51*

2.3.6. Modeling the RF ablation mode *52*
2.3.7. Modeling the ablation with a cooled electrode *53*
2.4. Results 53
2.4.1. Construction of the model *53*
2.4.2. Effect of frequency for the dry electrode case *53*
2.4.3. Ablation with cooled electrode *54*
2.4.4. Comparison between ablation techniques *55*
2.5. Discussion 55
2.6. Conclusions 58

CHAPTER 3. IMPEDANCE MEASUREMENT TO ASSESS EPICARDIAL FAT PRIOR TO RF INTRAOPERATIVE CARDIAC ABLATION: FEASIBILITY STUDY USING A COMPUTER MODEL 70
3.1. Abstract 70
3.2. Introduction 71
3.3. Methods 72
3.3.1. Description of the theoretical model *72*
3.3.2. Impedance measuring technique *73*
3.3.3. Governing equations *73*
3.3.4. Boundary conditions *74*
3.3.5. Construction of the numerical model *74*
3.3.6. Effect of different fat profiles *75*
3.3.7. Effect of lateral width of epicardial fat *75*
3.4. Results 76
3.4.1. Construction of the model *76*
3.4.2. Effect of different fat profiles *76*
3.4.3. Effect of lateral width of epicardial fat *77*
3.5. Discussion 77
3.6. Conclusions 78

CHAPTER 4. RF ABLATION WITH CATHETERS PLACED ON OPPOSING SIDES OF THE VENTRICULAR WALL: COMPUTER MODELING COMPARING BIPOLAR AND UNIPOLAR MODES 87

4.1. Abstract 87

4.2. Introduction 88

4.3. Materials and methods 89

4.3.1. Computer modeling 89

4.4. Results 93

4.4.1. Development of computational models 93

4.4.2. Interventricular septum ablation 94

4.4.3. Ventricular free wall ablation 94

4.4.4. Effect of air on the epicardial side 95

4.4.5. Effect of changing the orientation of epicardial catheter 95

4.4.6. Effect of the misalignment of catheters 96

4.5. Discussion 96

4.5.1. Study Limitations 99

4.6. Conclusions 99

CHAPTER 5. FEASIBILITY STUDY OF AN INTERNALLY COOLED BIPOLAR APPLICATOR FOR RF COAGULATION OF HEPATIC TISSUE: EXPERIMENTAL AND COMPUTATIONAL STUDY 111

5.1. Abstract 111

5.2. Introduction 112

5.3. Materials and methods 114

5.3.1. Description of the device 114

5.3.2. Ex vivo experimental setup 114

5.3.3. In vivo experimental setup 115

5.3.4. Computational modeling 116

5.4. Results 121

5.5. Discussion 123

5.6. Conclusions 126

CHAPTER 6. COULD THE HEAT SINK EFFECT OF BLOOD FLOW INSIDE LARGE VESSELS PROTECT THE VESSEL WALL FROM THERMAL DAMAGE DURING RF-ASSISTED SURGICAL RESECTION? A COMPUTER MODELING AND AN IN VIVO EXPERIMENTAL STUDY 136

6.1. Abstract 136

6.2. Introduction 137

6.3. Materials and methods 139

6.3.1. Description of the RF-assisted device 139

6.3.2. Computer modeling 139

6.3.3. Modeling blood flow 143

6.3.3.a. Method 1: constant h_v 143

6.3.3.b. Method 2: temperature-dependent h_v 144

6.3.3.c. Method 3: advection heat method 145

6.3.4. Comparison of blood flow models 146

6.3.5. Thermal modeling 146

6.3.6. Experimental setup 147

6.4. Results 148

6.4.1. Computer modeling 148

6.4.2. Comparison of blood flow models 148

6.4.3. Thermal modeling 149

6.4.4. Experimental validation 151

6.5. Discussion 152

6.6. Conclusions 156

CHAPTER 7. THERMO-ELASTIC RESPONSE TO RF HEATING WITH THERMAL DAMAGE QUANTIFICATION OF SUBCUTANEOUS ADIPOSE TISSUE OF DIFFERENT FIBROUS SEPTA ARCHITECTURES: A COMPUTATIONAL MODELING STUDY 169

7.1. Abstract 169

7.2. Introduction 170

7.3. Materials and methods 172

7.3.1. Physical Situation 172

7.3.2. Governing Equations 172

7.3.3. Tissue Characteristics *175*
7.3.4. Boundary and initial conditions *175*
7.4. Results 177
7.4.1. Electric Response *177*
7.4.2. Temperature Response and Damage Quantification *177*
7.4.3. Thermo-elastic Response *178*
7.4.4. Comparison with case of absence of fibrous septa *179*
7.5. Discussion 179
7.6. Conclusions 181

CHAPTER 8. GENERAL DISCUSSION 194
CHAPTER 9. CONCLUSIONS 198
