

Índice general

1. Introducción	1
1.1. Motivación	2
1.2. Objetivos	3
1.3. Principales contribuciones	6
1.4. Contexto	9
1.5. Estructura	10
2. Liver segmentation in MRI: A Fully automatic Method Based on Stochastic Partitions	13
2.1. Introduction	16
2.2. Image processing methods	20
2.2.1. Watershed transform using markers	20
2.2.2. Stochastic watershed transform	22
2.2.3. Segmentation algorithm for initial slice	28
2.2.4. Main segmentation algorithm	32
2.3. Results	37
2.3.1. Dataset information and training procedure	37
2.3.2. Test Dataset and final parameters	38
2.4. Discussion and Conclusions	44
3. A Method for Liver Segmentation on Computed Tomo- graphy Images in Venous Phase Suitable for Real Envi- ronments	53
3.1. Introduction	56
3.2. Method	60

3.2.1.	Theoretical background	60
3.2.2.	Algorithm	62
3.2.3.	Post-Processing	64
3.3.	Results	66
3.3.1.	Influence of the noise reduction filter	69
3.3.2.	Influence of user-iteration in the seed selection	69
3.4.	Discussion	71
3.5.	Conclusions and future work	73
4.	Design and Validation of an Augmented Reality System for Laparoscopic Surgery in a Real Environment	77
4.1.	Introduction	79
4.2.	Methodology	85
4.2.1.	Augmented reality system	85
4.2.2.	Experimentation	90
4.3.	Results	97
4.4.	Conclusions	99
5.	Conclusiones	103
5.1.	Trabajo Futuro	108
	Méritos	111
	Bibliografía	117
