

# Table of contents

<b>Justification, Objectives and Contributions</b>	<b>13</b>
----------------------------------------------------	-----------

---

## Part I: state of the art

---

<b>Mathematical models of cells</b>	<b>23</b>
1.1 Introduction .....	24
1.2 Models for Bioprocess Engineering .....	25
1.3 Models for Systems Biology .....	27
1.4 Classification of models of cells .....	30
1.5 Kinetic models .....	33
1.6 Conclusions .....	41
<b>Constraint-based models of the cell metabolism</b>	<b>43</b>
2.1 Introduction .....	44
2.2 Preliminaries: metabolic networks .....	45
2.3 Classical principles of stoichiometric modelling .....	47
2.4 Constraint-based modelling perspective .....	49
2.5 Classification of constraint-based methodologies .....	51
2.6 Metabolic pathways analysis: identifying pathways .....	54
2.7 Metabolic flux analysis: estimating fluxes .....	56
2.8 Flux balance analysis: predicting fluxes .....	61
2.9 Conclusions .....	65
<b>Network-based metabolic pathways: a comparison</b>	<b>67</b>
3.1 Introduction .....	68
3.2 Different concepts of pathways .....	69
3.3 Comparison of the different pathway concepts .....	74
3.4 Illustrative examples .....	81
3.5 Conclusions .....	83

---

## Part II: Interval methods

---

<b>Interval estimates of metabolic fluxes under data scarcity</b>	<b>89</b>
4.1 Introduction .....	90
4.2 Preliminaries on metabolic flux analysis .....	91
4.3 Flux-spectrum MFA: an interval approach .....	93
4.4 Case study: cultivation of CHO cells .....	104
4.5 Case study: C. glutamicum .....	111
4.6 Conclusions .....	123

<b>Translation of flux states into pathway activities under data scarcity</b>	<b>125</b>
5.1 Introduction .....	126
5.2 From fluxes to pathway activities .....	126
5.3 The $\alpha$ -spectrum .....	130
5.4 Case study: CHO cells .....	133
5.5 Conclusions .....	136
<b>Estimation of time-varying fluxes under data scarcity</b>	<b>139</b>
6.1 Introduction .....	140
6.2 Estimation procedure .....	141
6.3 Case study: CHO cells .....	147
6.4 Case study: CHO cells under uncertainty .....	158
6.5 Conclusions .....	164
<hr/>	
<b>Part III: Possibilistic methods</b>	
<hr/>	
<b>Possibilistic framework to analyse consistency and estimate the metabolic fluxes</b>	<b>169</b>
7.1 Introduction .....	170
7.2 Preliminaries: possibility and optimisation .....	171
7.3 Preliminaries: metabolic flux analysis .....	177
7.4 Possibilistic MFA .....	179
7.5 Possibilistic MFA: refinements .....	187
7.6 Possibilistic MFA: illustrative examples .....	189
7.7 Case study: <i>C. glutamicum</i> .....	194
7.8 Conclusions .....	199
<b>Possibilistic, dynamic prediction of fluxes and metabolites</b>	<b>201</b>
8.1 Introduction .....	202
8.2 Dynamic Possibilistic MFA .....	203
8.3 Case study: CHO cells .....	210
8.4 Dynamic Possibilistic FBA .....	216
8.5 Case study: <i>E. coli</i> .....	218
8.6 Conclusions .....	222
<b>Possibilistic validation of a constraint-based model of <i>P. pastoris</i></b>	<b>225</b>
9.1 Introduction .....	226
9.2 Methods .....	227
9.3 Constraint-based model of <i>P. pastoris</i> .....	230
9.4 Analysis of the elementary modes .....	234
9.5 Validating the model against experimental data .....	236
9.6 Using the model to predict growth .....	240
9.7 Using the model to estimate every flux .....	241
9.8 Conclusions .....	243
<b>Conclusions</b>	<b>247</b>
<b>References</b>	<b>251</b>
