Abstract	iii
Motivation and thesis outline	x
Contents	xi
Glossary	xv
I Time-delay systems	1
1 Introduction	3
1.1 Solution concept and state of a TDS	4
1.2 Systems with input and output delays	6
1.3 Stability notions	7
1.4 Frequency domain vs time domain	7
1.5 Lyapunov-Krasovskii approach	8
1.6 Linear matrix inequalities	9
1.6.1 Standard LMI problems	9
1.6.2 Schur complement	10
1.6.3 S-procedure	10
1.7 Delay-independent stability conditions	11
1.8 Delay-dependent stability conditions	12
1.8.1 Descriptor approach	12

1.8.2	Improved conditions	13
1.9	H_∞ -norm of TDSs	14
1.10	Lyapunov-based L_2 -gain analysis	15
2	Control strategies	17
2.1	Predictor-based controllers	18
2.1.1	Smith Predictor (SP)	18
2.1.2	Dead-time compensators (DTCs)	19
2.1.3	Finite spectrum assignment (FSA)	20
2.2	PID-based controllers	20
2.3	Integral-free prediction-based controllers	21
2.3.1	Predictor in observer form	22
2.3.2	Other techniques	24
II	Disturbance observers and predictive feedback	25
3	Introduction	27
3.1	Limitations of the Smith Predictor	28
3.1.1	Modifications of the Smith Predictor	28
3.2	Disturbance observer based control	29
3.2.1	Frequency domain formulation	30
3.2.2	Time-domain formulation	30
3.2.3	Disturbance observers for time-delay systems	32
3.3	Contributions in this part	34
4	A Generalized Smith Predictor (GSP)	35
4.1	Introduction	36
4.1.1	The Smith's Principle	37
4.2	Problem reformulation	39

4.3	Proposed generalized SP	40
4.4	Predictor-based control	43
4.4.1	Performance and robustness	43
4.4.2	Discrete-time implementation	44
4.5	Simulations	46
4.5.1	Constant disturbance rejection	46
4.5.2	Sinusoidal disturbance rejection	51
4.6	Experimental results	52
5	Enhanced disturbance rejection for LTI systems with input delay	55
5.1	Introduction	56
5.2	Problem statement	57
5.3	Proposed Predictor-based control	58
5.4	Performance analysis	62
5.5	Numerical validation	64
6	Rejection of mismatched disturbances for input-delayed systems	65
6.1	Introduction	66
6.2	Problem statement	66
6.3	Proposed control strategy	69
6.3.1	Observer-based predictive controller	70
6.3.2	Closed-loop stability	71
6.4	Trajectory tracking	73
6.5	Simulations	75
7	Improving performance of disturbance observers via predictive feedback	79
7.1	Introduction	80
7.2	Problem formulation and preliminaries	81
7.3	Proposed control strategy	83

7.3.1	Control law development	83
7.3.2	Closed-loop stability	86
7.3.3	Digital implementation	90
7.4	Application to Quadrotor Aircraft	90
7.4.1	Modeling of quadrotor systems	91
7.4.2	Simulations	92
7.4.3	Experimental validation in flight tests	97
III	Time-delay systems in the PDE framework	101
8	Introduction	103
8.1	ODEs with transport dynamics	104
8.1.1	Time-delay systems as ODE-PDE cascades	104
8.1.2	Backstepping controller design	105
8.1.3	Relation with finite backstepping	106
8.1.4	PDE observer for systems with measurement delay	107
8.2	ODEs with diffusive dynamics	109
8.2.1	Backstepping controller design	109
8.2.2	PDE observer for systems with diffusive sensor dynamics	110
8.3	Contributions in this part	110
9	Observer-based compensation of infinite-dimensional actuator dynamics	113
9.1	Introduction	114
9.1.1	Problem statement	115
9.1.2	Motivation	116
9.2	Delay dynamics	117
9.2.1	Nominal case	117
9.2.2	Robustness to delay mismatch	122

9.3	Diffusive dynamics	131
9.3.1	Nominal case	131
9.3.2	Robustness to diffusion coefficient mismatch	139
9.4	Simulations	153
9.4.1	Delay case	153
9.4.2	Diffusion case	153
10	LTV systems with time-varying measurement delay	157
10.1	Introduction	158
10.2	Time-varying delays in the PDE framework	159
10.2.1	Predictor-based controller for time-varying input delay	160
10.2.2	Predictor-based observer for time-varying measurement delay	161
10.2.3	A new PDE observer for time-varying measurement delay . . .	161
10.3	Linear time-varying systems	162
10.3.1	PDE observer for LTV systems with time-varying delay	163
10.3.2	Observer-based controller	169
10.4	Simulations	171
	Conclusions	173
	Bibliography	177
