

Table of contents

1	General introduction	1
1.1	Graphene.....	2
1.2	Graphene preparation	7
1.3	Defective graphenes by pyrolysis of biopolymers	16
1.4	Heterojunctions of defective graphenes with 2D materials or metal nanoplatelets.....	24
1.5	References.....	32
2	Objectives	44
3	Quality improvement of defective graphene from biomass	47
3.1	Introduction	48
3.2	Results and discussion.....	50
3.3	Conclusions	70
3.4	References.....	72
4	Catalyst-free one step synthesis of large area vertically stacked N-doped graphene-boron nitride heterostructures from biomass source	75
4.1	Introduction	76
4.2	Results and discussion.....	77
4.3	Conclusions	89
4.4	References.....	90
5	One-step preparation of large area films of oriented MoS₂ nanoparticles on multilayer graphene and its electrocatalytic activity for hydrogen evolution	97
5.1	Introduction	98
5.2	Results and discussion.....	100
5.2.1	Sample preparation and characterization.....	100
5.2.2	Electrocatalytic measurements.....	109
5.3	Conclusions	112

5.4	References.....	113
6	Iron nanoparticles embedded in graphitic carbon matrix as heterogeneous catalysts for the oxidative C–N coupling of aromatic N–H compounds and amides	116
6.1	Introduction	117
6.2	Results and discussion.....	118
6.2.1	Catalyst preparation and characterization	118
6.2.2	Oxidative C–N coupling	128
6.2.3	Reusability and catalyst stability	133
6.2.4	Role of Cu impurities.....	135
6.2.5	Reaction mechanism.....	136
6.2.6	Scope of the reaction.....	138
6.3	Conclusions	139
6.4	References.....	141
7	Extremely high selectivity towards isobutane in CO₂ hydrogenation catalyzed by Fe-Co alloy nanoparticles embedded in graphitic carbon matrix.....	146
7.1	Introduction	147
7.2	Results and discussion.....	149
7.3	Catalytic activity	164
7.4	Theoretical calculations	169
7.5	Conclusions	172
7.6	References.....	173
8	Experimental section	179
8.1	Synthesis of materials	180
8.1.1	Synthesis of (N)G films	180
8.1.2	Synthesis of G films	180
8.1.3	Synthesis of (N)G/h-BN and h-BN	181
8.1.4	Synthesis of oriented MoS ₂ /ml-G films.....	181
8.1.5	Synthesis of Fe/CoNP@C	182

8.1.6	Synthesis of $\text{Fe}_x\text{Co}_y@(\text{N})\text{G}$	182
8.2	Experimental procedures	183
8.2.1	Photoelectronic tests for (N)G and G films used as electrodes.....	183
8.2.2	Electrical measurements for (N)G/h-BN and (N)G	183
8.2.3	Electrochemical measurements for oriented $\text{MoS}_2/\text{ml-G}$ films	184
8.2.4	General procedure for the oxidative C-N coupling	184
8.2.5	Reuse experiment for the oxidative C-N coupling.....	185
8.2.6	Catalytic test procedure for the CO_2 hydrogenation.....	185
8.3	Characterization techniques	186
8.3.1	Transmission electron microscopy (TEM)	186
8.3.2	Scanning electron microscopy (SEM)	186
8.3.3	Atomic force microscopy (AFM)	187
8.3.4	Raman spectroscopy.....	188
8.3.5	X-ray diffraction (XRD).....	188
8.3.6	X-ray photoelectron spectroscopy (XPS).....	189
8.3.7	Combustion elemental analysis.....	190
8.3.8	ICP-OES plasma spectroscopy	190
8.3.9	Thermogravimetric analysis (TGA).....	191
8.3.10	Gas Chromatography (GC).....	191
8.3.11	Gas Chromatography coupled to mass spectrometry (GC-MS)	192
8.3.12	Optical microscopy	192
8.3.13	Brunauer–Emmett–Teller (BET) surface area analysis.....	192
9	Conclusions	194
10	Abstracts.....	197
11	Lists of publications	204
