

Table of Contents

1	Introduction	1
1.1	Introduction	2
1.2	Technological and normative framework	2
1.2.1	The transport sector energy balance	2
1.2.2	The heavy duty CI engine pollutants and legislation ..	3
1.2.3	The technological answer to heavy duty CI engine legislation	6
1.2.4	The fuel quality constraint	7
1.3	Thesis relevance and objectives.....	8
1.4	Thesis structure	9
	Bibliography	12
2	Literature review and state of the art	13
2.1	Introduction	14
2.2	Conventional Diesel combustion	14
2.2.1	Temporal evolution of the Diesel combustion	14
2.2.2	Spacial evolution of the Diesel combustion	17
2.3	Emissions control strategies in Diesel engines	25
2.3.1	In-cylinder engine controls	25
2.3.1.1	Fuel injection systems	26
2.3.1.2	Air handling technology	27
2.3.1.3	Exhaust gas recirculation systems.....	27

2.3.2	Aftertreatment	27
2.3.2.1	Selective catalytic reduction systems	28
2.3.2.2	Diesel oxidation catalysts	28
2.3.2.3	Diesel particulate filters	28
2.4	Cost effective emissions control strategies	29
2.4.1	The injection-combustion strategies	30
2.4.1.1	The injection parameters	30
2.4.1.2	The injection-combustion hardware	32
2.4.2	The Air management strategies	34
2.4.2.1	Miller camshaft profile	34
2.4.2.2	iEGR camshaft profile	36
	Bibliography	39
3	Experimental and theoretical tools	43
3.1	Introduction	44
3.2	Experimental tools	44
3.2.1	Heavy duty Diesel engine	44
3.2.1.1	Injection system characteristics	44
3.2.1.2	Engine operating conditions	46
3.2.2	Research test cell facility	47
3.2.2.1	Regulation and control equipment	48
3.2.2.2	Measuring and acquisition systems	49
3.2.2.3	Instrumentation description	51
3.2.3	Experimental procedures description	55
3.2.3.1	Camshaft profiles measurement	55
3.2.3.2	Standard testing routine	56
3.3	Theoretical tools	57
3.3.1	0D Engine maps	58
3.3.2	0D CALMEC model for combustion diagnosis	59
3.3.2.1	Adiabatic flame temperature estimation	63

3.3.3	1D GT Power model in air-management conditions simulation	65
3.3.3.1	GT Power engine 1D model validation	67
3.3.4	3D StarCD CFD model for injection-combustion simulation	68
3.3.4.1	CFD model validation	70
	Bibliography	72
4	Strategies focused on injection-combustion process	75
4.1	Introduction	76
4.2	The injection parameters exploration	76
4.2.1	The injection parameters study CFD approach	76
4.2.1.1	Simplification of the main factors to be experimentally tested	80
4.2.2	Experimental study of the SOI and the IP	81
4.2.2.1	Study in the medium engine speed	81
4.2.2.2	Study in the high engine speed	84
4.3	The combustion hardware matching	88
4.3.1	Double calibration of the 3D CFD model	88
4.3.2	Combustion hardware 3D CFD simulations	90
4.3.2.1	Simplification and exploration of the main factors	91
4.A	Appendix: DoE: Central composite design description	96
	Bibliography	98
5	Strategies focused on air management	101
5.1	Introduction	102
5.2	Camshaft strategies simulation and selection	102
5.2.1	Engine operating conditions selection	102
5.2.2	Internal EGR camshaft profile selection	103
5.2.3	Miller camshaft profile selection	104
5.3	Experimental validation of selected camshaft profiles	105

5.3.1	Operating conditions of the experimental validation ..	106
5.3.2	Part load experimental exploration of selected camshaft profiles	106
5.3.3	Full load validation of selected camshaft profiles	114
5.3.4	Transient effects discussion	117
5.4	Miller and iEGR camshafts profiles cycle testing	119
5.4.1	Points definition and mechanical limits	119
5.4.1.1	Test injection settings evaluation	119
5.4.1.2	Evaluated mechanical limits	119
5.4.2	Pollutants and engine efficiency	121
	Bibliography	123
6	Potential of the cost-effective strategies combination	125
6.1	Introduction	126
6.2	The injection parameters and the Miller strategy combination	126
6.2.1	Miller Parametric study definition	126
6.2.2	Medium engine speed parametric study	127
6.2.3	High engine speed parametric study	129
6.2.4	Summary of Miller strategy study	131
6.3	The injection parameters and the iEGR strategy combination	132
6.3.1	iEGR Parametric study definition	132
6.3.2	Medium engine speed parametric study	133
6.3.3	High engine speed parametric study	134
6.3.4	Summary of iEGR strategy study	136
6.4	Strategies optimization comparison	137
6.4.1	Medium engine speed conditions	137
6.4.2	High engine speed conditions	139
6.5	Weighing of the Miller and iEGR strategies	140
6.5.1	Engine operating conditions weighing	141
6.5.2	Cost-Effective strategies limits	141
	Bibliography	144

7 Conclusions and future work	145
7.1 Introduction	146
7.2 Summary of thesis development and main conclusions	146
7.2.1 The injection parameters exploration	147
7.2.2 The air management strategies	148
7.2.3 Potential of the cost-effective strategies combination ..	149
7.3 Future work and new research paths	150
7.3.1 The potential in CO ₂ reduction	151
Bibliography	153
Bibliography	155
