

Table of Contents

Chapter 1	2
1.1 Introduction	2
1.2 Technological framework of the internal combustion engines	2
1.3 Approach and content of the document	9
1.4 Bibliography	13
Chapter 2	15
2.1 Introduction	17
2.2 Phenomenology of the DI Diesel combustion	17
2.2.1 Temporal description of injection/combustion process	18
2.2.2 Formation of the air-fuel mixture	20
2.2.3 Autoignition process	22
2.2.4 Concept model of diesel diffusion flame	25
2.3 Characterization of soot formation and oxidation processes	28
2.3.1 Soot formation. General description	29
2.3.2 Soot oxidation. General description	33
2.4 Heat transfer process in ICE	39
2.5 Approach of the study	49
2.5.1 Motivation of the study	49
2.5.2 Objectives of the study	52
2.5.3 General methodology of the study	53
2.6 Bibliography	55
Chapter 3	61

3.1	Introduction	63
3.2	Experimental tools	63
3.2.1	Fuel mass flow measurement. Mass flow rate meter	64
3.2.2	Test bench and engines.....	66
3.2.3	Measurement equipment and instrumentation	70
3.3	Theoretical tools.....	78
3.3.1	Combustion diagnosis code. CALMEC.....	78
3.3.2	1-D spray modelling. DICOM	82
3.3.3	Chemical kinetic calculation code. CHEMKIN.....	84
3.4	Visualization techniques. Two-color method.....	87
3.4.1	Two-color method.....	87
3.5	Conclusions	94
3.6	Bibliography.....	95
Chapter 4	101
4.1	Introduction	103
4.2	General methodology of the study	104
4.3	Spatial-temporal analysis of the radiation under controlled conditions.	105
4.3.1	Test conditions	106
4.3.2	Influence of injection pressure, ambient gas temperature and density on spectral intensity	108
4.3.3	Influence of injection pressure, ambient gas temperature and density on in-cylinder soot temperature and optical thickness (KL)	112
4.3.4	Comparison of results between different optical configurations. Optoelectronic probe validation (VisioFEM).....	118

4.4	Temporal characterization of the radiation under real conditions	121
4.4.1	Test conditions	121
4.4.2	Influence of different engine parameters on soot temperature, optical thickness and radiation intensity.....	124
4.5	Conclusions	131
4.6	Bibliography.....	134

Chapter 5 139

5.1	Introduction	141
5.2	General methodology of the study	144
5.3	Influence of engine parameters on soot oxidation process.....	148
5.3.1	Test conditions	149
5.3.2	Effect of air intake characteristics on soot oxidation.....	151
5.3.3	Effect of injection strategy characteristics on soot oxidation...	161
5.3.4	Discussion $t_{1/2,KL}$ VS $t_{1/2,ACT-1}$	166
5.4	Strategies for improve soot oxidation during the late-cycle combustion	173
5.4.1	Test conditions	173
5.4.2	Impact of swirl ratio on late-cycle combustion.....	176
5.4.3	Impact of injection pattern on late-cycle combustion.....	182
5.4.4	Emissions comparison of optimized swirl ratio and post-injection strategies on late-cycle combustion	189
5.5	Conclusions	190
5.6	Bibliography.....	192

Chapter 6 197

6.1	Introduction	199
-----	--------------------	-----

6.2	General methodology of the study	200
6.3	Experimental database	201
6.3.1	Installation: High pressure and high temperature vessel.....	201
6.3.2	Previous experimental results [10].....	202
6.4	Spray model	203
6.4.1	Model description	204
6.4.2	Spray model adjustment under inert conditions. Spray angle..	204
6.4.3	Spray model validation under reactive conditions.....	206
6.5	Soot Model.....	208
6.5.1	Model description	209
6.5.2	Adjustment methodology. Soot model validation.....	211
6.6	Radiation model.....	214
6.6.1	Model description	215
6.6.2	Spectral intensity.....	217
6.6.3	Total radiation	219
6.7	Conclusions.....	221
6.8	Bibliography.....	223
Chapter 7	227
7.1	Introduction.....	228
7.2	Conclusions.....	228
7.3	Future works.....	233
