Abstract	iii
1 Introduction	1
1.1 Motivation and background	1
1.2 Objectives	6
1.3 Structure of the thesis	7
I State of the Art	11
2 Glucose control	13
2.1 Glucose control	13
2.2 Diabetes	18
2.3 Type 1 diabetes	19
3 Artificial Pancreas	27
3.1 Artificial Pancreas	27
3.2 Control algorithms	29
3.3 Challenges of Artificial Pancreas controllers	32
3.4 Control targets	38
4 Models of glucose regulation in type 1 diabetes	45
4.1 Mathematical representation of glucoregulation	45
4.2 Simulation models for in silico testing of control algorithms in T1D	48
4.3 Models considered	51
II Contributions	57
5 Physiological modelling of hypoglycaemia	59
5.1 Preliminaries	59
5.2 Counterregulation	62

5.3	Methods	67
5.4	Model of adrenaline secretion	73
5.5	Model of adrenaline action	82
5.6	Role of free fatty acids in counterregulation: a comprehensive physiological model of hypoglycaemia	92
5.7	Conclusions	108
6	Glucose Variability Assessment	111
6.1	Preliminaries	111
6.2	Discriminant ratio	115
6.3	Metrics comparison	117
6.4	Interrelationship between metrics	121
6.5	Conclusions	125
7	Dual-hormone coordinated control	127
7.1	Preliminaries	128
7.2	Current dual-hormone systems structure	130
7.3	Models of the glucose-insulin-glucagon system	131
7.4	Control of Multiple Input-Single Output systems	133
7.5	Coordinated controller proposal	138
7.6	Limitation of insulin on board	155
7.7	Conclusions	162
8	Conclusions	165
	Publications authored or co-authored	171
	Appendices	175
A	Glucose Variability metrics	177
B	Individual parameters identification	183
B.1	Individual parameters	183
B.2	Residual analysis	187
C	Evaluation of CC and NCC configuration	193
C.1	Assessment of CC and NCC configuration	193
C.2	Statistical analysis of CC vs NCC comparisons	197
	Bibliography	213
