Samenvatting in het Nederlands **v**

Resumen en español **xi**

Resum en valencià **xvii**

Summary in English **xxiii**

1 Introduction **1-1**
1.1 Overview of the contributions 1-2
1.1.1 Very low complexity coding of images using Modulo-PCM 1-2
1.1.2 Pixel-domain distributed video coding 1-3
1.1.3 Vision systems for 2D occupancy sensing 1-4
1.1.4 Task assignment in intelligent vision networks 1-5
1.2 Summary of the scientific output 1-5
1.3 Outline 1-6

2 Very Low Complexity Coding of Images Using Modulo-PCM **2-1**
2.1 Introduction 2-1
2.2 MPCM coding 2-3
2.2.1 MPCM coding of one-dimensional signals 2-4
2.2.2 MPCM coding of images 2-8
2.2.3 Relation with other coding techniques 2-9
2.3 Distortion model of the MPCM coder 2-11
2.3.1 Distortion model of the MPCM signal 2-11
2.3.1.1 Theoretical expression 2-11
2.3.1.2 Simulations 2-13
2.3.2 Overall distortion of the MPCM coder 2-15
2.4 Optimum coding parameters 2-17
2.4.1 Theoretical optimum coding parameters 2-17
2.4.2 Assignment table 2-20
2.5 Computational Complexity 2-21
2.5.1 Encoder 2-22
2.5.2 Decoder 2-23

2.6 Experimental results . . . 2-24
2.6.1 Experimental optimum parameters . . . 2-24
2.6.2 Coding efficiency and complexity . . . 2-26
2.6.3 Comparison with other techniques . . . 2-33
2.7 Conclusion . . . 2-37

3 Pixel-Domain Distributed Video Coding 3-1
3.1 Introduction . . . 3-1
3.2 Pixel-domain Wyner-Ziv video coder . . . 3-4
3.2.1 General scheme . . . 3-4
3.2.1.1 Encoder . . . 3-5
3.2.1.2 Decoder . . . 3-6
3.2.2 Turbo code-based coder . . . 3-7
3.2.3 Comparison with literature and visual result . . . 3-9
3.3 Distortion analysis . . . 3-12
3.3.1 Distortion model . . . 3-12
3.3.2 Frame-adaptive Δ-selection algorithm . . . 3-14
3.3.3 Experimental Results . . . 3-16
3.4 Feedback channel removal . . . 3-19
3.4.1 Rate allocation problem for pixel-domain distributed video coders . . . 3-20
3.4.2 Rate allocation for feedback channel removal . . . 3-21
3.4.2.1 Estimation of σ^2 . . . 3-22
3.4.2.2 Estimation of the error probabilities $\{P_k\}$ . . . 3-23
3.4.2.3 Estimation of the encoding rates $\{R_k\}$ . . . 3-24
3.4.2.4 Estimation of the residual error probabilities $\{Q_k\}$ 3-24
3.4.3 Experimental Results . . . 3-25
3.5 Reduction of decoder complexity and latency . . . 3-30
3.5.1 Decoder complexity and latency problem . . . 3-31
3.5.2 Rate allocation for complexity and latency reduction . . . 3-33
3.5.2.1 Estimation of σ^2 . . . 3-33
3.5.2.2 Estimation of the encoding rates $\{R_k\}$ . . . 3-36
3.5.3 Experimental results and discussion . . . 3-38
3.6 Conclusion . . . 3-45

4 Vision Systems for 2D Occupancy Sensing 4-1
4.1 Introduction . . . 4-1
4.2 Multi-view occupancy mapping . . . 4-4
4.2.1 Related work . . . 4-4
4.2.2 Dempster-Shafer theory of evidence . . . 4-5
4.2.3 Evidential multi-view occupancy maps . . . 4-6
4.3 Multiple light-integrating line sensors for occupancy sensing . . . 4-12
4.3.1 Related work . . . 4-12
4.3.2 System overview . . . 4-13
4.3.3 Foreground detection on scan lines . . . 4-19

4.3.3.1 Related work 4-19
4.3.3.2 Method 4-19
4.3.3.3 Computational requirements 4-22
4.3.3.4 Memory requirements 4-23
4.3.4 Occupancy maps from line sensor scan lines 4-25
4.4 Results 4-28
4.4.1 Comparison of multi-camera methods 4-29
4.4.2 Comparison of all methods 4-31
4.5 Real-time demonstrator 4-33
4.6 Conclusion 4-35

5 Task Assignment in Vision Networks 5-1
5.1 Introduction 5-1
5.2 Related work 5-3
5.3 Problem formulation 5-4
5.4 Constraints in smart camera networks 5-6
5.4.1 Cost function 5-6
5.4.2 Practically admissible assignments 5-7
5.4.3 Limitation of peak computational load 5-8
5.5 Suitability value for smart camera networks 5-9
5.5.1 Quantification of task-related information 5-10
5.5.2 Generalized information-theoretic approach 5-11
5.6 Solving the optimization problem 5-12
5.6.1 Greedy heuristics 5-13
5.6.2 Complexity reduction 5-15
5.7 Application to task assignment for multiple object tracking 5-16
5.7.1 Related work 5-17
5.7.2 Suitability value for tracking 5-19
5.7.3 Practical choices 5-20
5.7.3.1 Multi-camera multi-person tracking 5-21
5.7.3.2 Obtaining the BBA m_{S^k} 5-22
5.7.3.3 Discretization scheme 5-23
5.7.3.4 Avoiding costly data transmissions 5-24
5.8 Results 5-25
5.8.1 Test data 5-25
5.8.2 Evaluation metrics 5-26
5.8.3 Tracking performance 5-27
5.8.4 Computation time and frame rate 5-33
5.9 Conclusion 5-35

6 Overall Conclusion 6-1
6.1 Conclusions 6-1
6.1.1 Modulo-PCM based coding algorithm for very low complexity coding of images 6-1

6.1.2 Thorough study and improvement of pixel-domain distributed video coding algorithms 6-2
6.1.3 Novel vision systems for calculating accurate 2D occupancy maps 6-3
6.1.4 Task assignment framework for intelligent vision networks 6-3
6.2 Contributions 6-4
6.3 Future work 6-5

A Appendices **A-1**
A.1 Derivation of (2.16) A-1
A.2 Derivation of (2.17) A-2
