• Chapter 1. Introduction

1. Abdomen and conventional open surgery
   1.1. Abdomen
   1.2. Laparotomy
2. Laparoscopic surgery
   2.1. Procedure and instrumentation
       2.1.1. Laparoscopic conventional hand-held instruments
       2.1.2. The pistol grip handle and the instrument tips
   2.2. Advantages of laparoscopy
   2.3. Disadvantages of laparoscopy
3. Fatigue and musculoskeletal disorders associated to laparoscopic surgery
   3.1. Fatigue
   3.2. Fatigue associated to laparoscopic surgery
   3.3. Musculoskeletal disorders
   3.4. Ergonomic and musculoskeletal disorders associated to laparoscopic surgery
4. The design of ergonomic laparoscopic hand-held instruments
   4.1. Requirements for an ergonomic laparoscopic handle
   4.2. Solutions presented by other research teams
• **Chapter 2. Justification and objectives**

  5. **Justification**
     5.1. Key points that justify this manuscript
     5.2. The concept of “Postural Freedom”

  6. **Objectives**
     6.1. General objectives
     6.2. Specific objectives

• **Chapter 3. Electromyography evaluation**

  7. **Introduction. EMG in ergonomic studies**
     7.1. Skeletal muscle anatomy
     7.1.1. Micro anatomy
     7.2. Muscle performance
     7.2.1. Physiology
     7.2.2. Electrical signal associated to the skeletal muscle
     7.3. EMG recording techniques
     7.3.1. Intramuscular EMG
     7.3.2. Surface EMG
     7.4. Surface EMG analysis
     7.4.1. Analysis to measure the muscular effort. Amplitude parameter
     7.4.2. Analysis to measure the muscular fatigue. Mean and median frequency parameter
     7.5. Muscular fatigue index
     7.5.1. Failure point approach
     7.5.2. Spectral modifications approach
     7.5.3. JASA approach
     7.6. Other methods to detect muscular fatigue
     7.7. Introduction to the experiments
     7.8. Refining the experiment
8. **Materials and methods**  
  8.1. Participants  
  8.2. Instruments  
  8.3. Protocol  
  8.4. Data acquisition  
  8.5. Data analysis  

9. **Results**  

10. **Discussion**

• **Chapter 4. Motion capture analysis**  

11. **Introduction. Motion capture in ergonomic studies**  
  11.1. Critical movements in laparoscopic surgery  
  11.1.1. The VBST system  
  11.1.1.1. Marker-based  
  11.1.1.2. Depth-based  
  11.1.1.3. Contrast-based  
  11.2. Introduction to the experiment  
  11.3. Looking the appropriate MoCap system  

12. **Materials and methods**  
  12.1. Participants  
  12.2. Instruments  
  12.3. Protocol  
  12.4. Data acquisition  
  12.5. Data analysis  

13. **Results**  

14. **Discussion**

• **Chapter 5. Design and prototype of a PF instrument for laparoscopic surgery. User-centered design**  

15. **Introduction. The user-centered design**  
  15.1. User-centered methodology
16. Creating the design solution. Evotool
   16.1. Design of a PF hand-held laparoscopic instrument
   16.2. Prototyping
   16.3. Evotool
17. Evaluating the solution with real users
   17.1. User-based evaluations
   17.2. Test with expert users
   17.3. Test Results
   17.4. Discussion

- Chapter 6. Conclusions
- Chapter 7. Bibliography
