4.4 Introducing vaccination loss protection ........................................ 44
4.5 Introducing variations in the vaccination coverage ......................... 44

5 Model validation: The Australian case ........................................... 45
5.1 How to measure the decline ...................................................... 46
5.2 Does our model return similar values to those in [1]? .................... 46
5.3 Study of the herd immunity effect over HPV LR infection .............. 50
5.4 Effect of the reduction of the vaccine effectiveness in the catch-up vaccination .......................................................... 50
5.5 Discussion .............................................................................. 53

6 Simulations .................................................................................. 56
6.1 Decline of HPV LR infections and cases of genital warts in the long-term in Spain .............................................................. 57
6.2 Decline of HPV oncogenic HR infections in the long-term in Spain ....................................................................................... 59
6.3 What would happen in Spain if, after 20 years of the vaccination, the effect of the vaccine disappear completely? ....................... 61
6.4 Simulation of the effect of the tourism on the contagion of HPV in Spain .................................................................................. 62
6.5 Simulation of different vaccination strategies in girls and boys with the aim to eradicate the cancer diseases associated HPV oncogenic HR ..................................................................................... 67
6.6 Quantifying the delay to recover normal levels of decline due to a drop in the vaccination coverage ............................................. 71
6.7 How is the decline of HPV affected if the average number of LSPs increases significantly? ......................................................... 77
6.8 How does the decline of HPV changes if the percentage of MSMs increases significantly? ............................................................ 79

7 Conclusions and limitations ........................................................... 82
