

## CONTENTS

---

<b>1</b>	<b>Introduction</b>	10
1.1	<i>Motivation</i> .....	10
1.2	<i>Actuality</i> .....	11
1.3	<i>Novelty</i> .....	11
1.4	<i>Thesis structure</i> .....	11
<b>2</b>	<b>Method of moments. The mathematical background</b>	13
2.1	<i>Nevanlinna (response) functions and their mathematical properties</i>	13
2.2	<i>The classical Hamburger problem of moments</i> .....	14
2.3	<i>Orthogonal polynomials and the Nevanlinna formula</i> .....	17
2.4	<i>Canonical and degenerate solutions of a solvable truncated Hamburger moment problem</i>	21
2.5	<i>Non-canonical solutions of a truncated Hamburger problem. Application of the Nevanlinna formula</i>	25
<b>3</b>	<b>Application of the classical method of moments to the investigation of dynamical properties of strongly coupled plasmas</b>	30
<b>4</b>	<b>Solution of physical problems by the self-consistent method of moments</b>	40
4.1	<i>Dynamic structure factors</i> .....	40
4.2	<i>Dispersion equation</i> .....	53
4.3	<i>Dynamic local field corrections</i> .....	58
<b>5</b>	<b>Analysis of schemes for the calculation of plasma static characteristics</b>	72
<b>6</b>	<b>Nevanlinna parameter function investigation</b>	79
<b>7</b>	<b>Conclusions</b>	86
<b>8</b>	<b>Appendix A</b>	87
	<b>Bibliography</b>	90
