Acknowledgements	v
Abstract	vii
List of Figures	xv
List of Tables	xix
1 Introduction	1
1.1 Objectives	2
1.2 Structure of the Thesis	4
2 Vehicle network simulators	7
2.1 Introduction	7
2.2 Traffic simulators	12
2.3 Network simulators	12
3 Combining ABATIS, OMNeT++ and SUMO simulation tools	15
3.1 Simulation of Urban MObility (SUMO) Traffic Simulator	15
3.2 The Objective Modular Network Testbed in C++ (OMNeT++) network simulator	25
3.3 Automatic Balancing of Traffic through the Integration of Smart- phones with vehicles (ABATIS) route server	32
4 Traffic flow generation methodology	39
4.1 Introduction	39
4.2 Overview of traffic conditions for the city of Valencia	40
4.3 DFROUTER output analysis	41

4.4	Proposed Iterative Heuristic	43
4.5	Goodness of fit achieved by the iterative heuristic	48
4.6	Test and simulation results	48
4.7	Summary	55
5	Traffic congestion analysis	57
5.1	Introduction	57
5.2	Uniform traffic load regulation	58
5.3	Hotspot-based traffic load regulation	63
5.4	Summary	70
6	Traffic characterization and modeling procedure	71
6.1	Introduction	71
6.2	Unifying segments	72
6.3	Per-Segment travel time prediction	74
6.4	Segment behavior characterization with polynomial regression	76
6.5	Segment behavior characterization with logistic regression	79
6.6	Validation of the logistic regression under different congestion levels	80
6.7	Clustering results with logistic regression	81
6.8	Hotspot-based traffic congestion behavior	85
6.9	Summary	87
7	Proposed traffic balancing scheme	89
7.1	Introduction	89
7.2	linkABATIS smart interface	92
7.3	Uniform traffic load balancing	95
7.4	Hostpot-based traffic load balancing	98
7.5	Summary	105
8	Conclusions, Publications and Future Work	107
8.1	Conclusions	107
8.2	Publications	109
8.3	Internship and Projects	110
8.4	Future Work	111
	Bibliography	117
