

Table of Contents

Chapter 1.....	1
1.1 Introduction.....	2
1.2 Context of the Study.....	2
1.2.1 The Energy Framework.....	2
1.2.2 The Compression Ignition Engine.....	5
1.3 Structure of the document.....	13
1.4 Bibliography.....	15
Chapter 2.....	16
2.1 Introduction.....	18
2.2 The combustion process in a direct injection diesel engine.....	19
2.2.1 Combustion phases.....	19
2.2.2 Air/Fuel mixture formation.....	22
2.2.3 The autoignition process.....	25
2.2.4 The diesel diffusion flame model.....	28
2.3 Fundamental characteristics of the laser plasma induction process.....	32
2.3.1 Laser pulse duration and wavelength influences on the non-resonant breakdown induction.....	39
2.3.2 Energy breakdown threshold definition.....	41
2.4 Considerations upon LIP applicability under engine-like condition.....	41
2.4.1 Minimum ignition energy differences between Laser induced plasma and traditional spark plug.....	41
2.4.2 Effect of local mixture and air flow conditions upon laser induced plasma effectivity.....	45

2.4.3	Considerations upon the optimal kernel radius for ignition	51
2.4.4	Minimum ignition energy variation under engine-like conditions	52
2.5	Objectives of the study and Thesis approach	58
2.6	Bibliography	60
Chapter 3	66
3.1	Introduction	68
3.2	Hot Spray Test Rig	69
3.2.1	Hardware description	69
3.2.2	Engine characterization.....	72
3.2.3	Thermodynamic conditions stability with fuel injection	75
3.2.4	Ignition delay and rate of heat release.....	79
3.2.5	In-Cylinder Airflow	80
3.2.6	Injection System.....	88
3.3	Laser Induced Plasma (LIP) Ignition System.....	89
3.3.1	Laser Systems.....	89
3.1.2	Optical mirrors for Laser beam guidance	99
3.1.3	Laser beam focusing Lens	100
3.2	Optical Techniques.....	102
3.2.1	Schlieren visualization.....	102
3.2.2	Natural Luminosity (Broadband Radiation).....	106
3.3	One-Dimensional Spray Model.....	107
3.3.1	General Model Description.....	108
3.3.2	State relationship	110

3.4 Summary & Conclusions	113
3.5 Bibliography	114

Chapter 4.....117

4.1 Introduction.....	119
4.2 Laser induced plasma system set up	119
4.2.1 Previous considerations for the Laser ignition system design ...	120
4.2.2 Set up: Laser system selection for the induced plasma generation	122
4.2.3 Set up: final Laser induced plasma system configuration.....	126
4.3 Laser induced plasma system validation and optimization	128
4.3.1 Experimental set up and methodology	128
4.3.2 Laser induced plasma system effectiveness in atmospheric conditions	134
4.3.3 Laser induced plasma system effectiveness in engine-like conditions	138
4.4 Summary & Conclusions	144
4.5 Bibliography	146

Chapter 5.....148

5.1 Introduction.....	150
5.2 Experimental set up and methodology.....	151
5.2.1 Spray and flame visualization set up.....	151
5.2.2 Pressure signal processing	153
5.2.3 Diesel Autoignition: Laser induced plasma ignition conditions definition	155

5.2.4	Baseline case definition	161
5.2.5	Test matrix definition	164
5.3	Laser induced plasma ignition effects, a parametric study.....	169
5.3.1	Laser induced plasma ignition efficiency and overall success rate	170
5.3.2	Ignition delay time	172
5.3.3	Heat release rate.....	174
5.3.4	Spray tip penetration	178
5.3.5	Soot evolution.....	184
5.4	Summary & Conclusions	188
5.5	Bibliography	191
Chapter 6	193
6.1	Introduction	194
6.2	Conclusions	194
6.3	Future Works	198
