DOCTORADO EN INFORMÁTICA

# Partial Evaluation of Equational Logic Theories

PH.D. THESIS

Presented by:  
Angel Cuenca Ortega

Supervisors:  
Dr. María Alpuente Frasnado  
Dr. Santiago Escobar Román

Valencia, September 2019

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Partial Evaluation	1
1.1.1	Narrowing-driven Partial Evaluation	3
1.2	Partial Evaluation of Maude Equational Theories	5
1.2.1	Equational Theories in Maude	6
1.2.2	Variant generation	7
1.2.3	Order-sorted Equational closedness	8
1.2.4	Termination of the Equational Partial Evaluation process	8
1.2.5	Post-processing renaming modulo axioms	10
1.3	The Partial Evaluator Victoria	10
1.4	Equational NPE in practice	12
1.5	Contributions of the Thesis	15
1.6	Plan of the Thesis	16
1.7	List of Publications	16
1.8	Developed Tools	17
<b>2</b>	<b>Preliminaries</b>	<b>18</b>
2.1	Rewriting Logic and Term Rewriting	18
2.2	Equational Theories as Rewrite Theories	20
2.3	Narrowing in Rewriting Logic	21
2.4	Term Variants	22
2.5	The variant narrowing strategy	24
2.6	The folding variant narrowing strategy	26
<b>3</b>	<b>Inspecting Maude Variants with GLINTS</b>	<b>28</b>
3.1	Overview	28
3.2	Folding variant narrowing trees in GLINTS: a running example	30
3.3	GLINTS at a glimpse	33
3.3.1	Interactive tree unfolding and querying	33
3.3.2	Automated tree unfolding, enriched views and exporting	35
3.4	Implementation	36
3.4.1	Architecture of GLINTS	36
3.4.2	Extending Maude’s variant meta-operations	37
<b>4</b>	<b>Order-sorted Homeomorphic Embedding modulo Combinations of Associativity and/or Commutativity Axioms</b>	<b>39</b>
4.1	Overview	40

4.2	Pure homeomorphic embedding . . . . .	41
4.2.1	Mechanizing the Homeomorphic Embedding . . . . .	42
4.2.2	Symbolic Homeomorphic Embedding . . . . .	42
4.2.3	Adding sorts and subsorts . . . . .	43
4.2.4	Getting rid of variables . . . . .	45
4.3	Homeomorphic embedding modulo equational axioms . . . . .	46
4.4	Goal-driven homeomorphic embedding modulo $B$ . . . . .	50
4.4.1	An order-sorted homeomorphic embedding calculus modulo $B$ . . . . .	50
4.4.2	Reachability-based, (order-sorted) goal-driven homeomorphic embedding formulation . . . . .	51
4.5	Meta-Level deterministic (order-sorted) goal-driven homeomorphic embedding modulo $B$ . . . . .	53
4.6	Optimizations based on the term $B$ -ordering and reachable kinds . . . . .	56
4.7	Experiments . . . . .	60
<b>5</b>	<b>ACUOS<sup>2</sup>: A High-performance System for Modular ACU Generalization with Subtyping and Inheritance</b> . . . . .	<b>65</b>
5.1	Least General Generalization modulo A, C, and U . . . . .	66
5.2	ACUOS <sup>2</sup> : A High Performance Generalization System . . . . .	67
5.3	ACU Generalization in a Biological Domain . . . . .	69
5.4	Experimental Evaluation . . . . .	71
5.5	Related work . . . . .	72
<b>6</b>	<b>A Partial Evaluation Framework for Order-sorted Equational Programs modulo Axioms</b> . . . . .	<b>74</b>
6.1	<b>Related work</b> . . . . .	75
6.2	Specializing Equational Theories modulo Axioms . . . . .	75
6.2.1	The NPE Approach . . . . .	75
6.2.2	Partial evaluation of convergent rules modulo axioms . . . . .	77
6.2.3	Equational closedness and the generalized Partial Evaluation scheme . . . . .	78
6.2.4	Termination of the PE process . . . . .	82
6.2.5	Global Termination of Equational NPE . . . . .	83
6.2.6	Post-processing renaming modulo axioms . . . . .	88
6.2.7	Specializing the interpreter of an imperative programming language . . . . .	89
6.3	Experiments . . . . .	92
<b>7</b>	<b>Conclusions</b> . . . . .	<b>94</b>
	<b>Bibliography</b> . . . . .	<b>105</b>

# List of Figures

1.1	The essence of Partial Evaluation. . . . .	2
1.2	Narrowing trees for the goal $X + suc(suc(0))$ and $X + 0$ . . . . .	4
1.3	Specialized programs for the goals $X + suc(suc(0))$ and $X + 0$ . . . . .	4
1.4	Narrowing-driven Partial Evaluation . . . . .	5
1.5	Folding variant narrowing tree for the goal $X * Y$ . . . . .	8
1.6	Architecture of Victoria. . . . .	11
1.7	Input panel of Victoria. . . . .	11
1.8	Output panel of Victoria. . . . .	12
1.9	Folding variant narrowing tree for the goal $init \mid L \mid \Gamma$ . . . . .	14
1.10	Folding variant narrowing tree for the goal $S \mid L'' \mid \Gamma$ . . . . .	14
3.1	The FVP test for the modified non-FVP exclusive-or theory. . . . .	31
3.2	Inspecting variant computations of the modified non-FVP exclusive-or theory. . . . .	31
3.3	Comparison of nodes $V_4$ and $V_8$ . . . . .	31
3.4	The FVP test for the newly modified exclusive-or theory with true verdict and variants for $_ * _$ . . . . .	32
3.5	Result of the query “ $_ * ?$ ” for the VNT of the non-FVP exclusive-or theory. . . . .	34
3.6	Enriched view showing equational unifiers for the original exclusive-or theory (fragment). . . . .	36
3.7	Architecture of GLINTS. . . . .	36
4.1	Symbolic homeomorphic embedding . . . . .	42
4.2	Signature graph of Example 4.1 . . . . .	43
4.3	Order-sorted extended homeomorphic embedding . . . . .	44
4.4	Signature graph of Example 4.2 . . . . .	44
4.5	Extra coupling rules for A, C, and AC symbols . . . . .	50
4.6	Coupling rules for flattened terms with associative and associative-commutative symbols . . . . .	53
4.7	Meta-level homeomorphic embedding modulo axioms . . . . .	55
4.8	Evaluation sequence for $'+[ '1, '2, '3 ] \preceq_B^{ml} '[ '4, '2, '3, '1 ]$ . . . . .	56
4.9	Signature graph of Example 4.13 . . . . .	58
4.10	Comparison of $\preceq$ in Prolog vs. $\preceq_{\emptyset}^{kosml}$ for the NatList example (no axioms in goals) . . . . .	64
6.1	Folding variant narrowing tree for the goal $flip(flip(T))$ . . . . .	76
6.2	A binary graph (left) and its flipped version (right). . . . .	77
6.3	Folding variant narrowing tree for the goal $flip(flip(BG))$ . . . . .	79
6.4	Fixing a graph. . . . .	80

6.5	Folding variant narrowing tree for the goal <code>fix(2, e, {R1 I R2} ; BG?)</code> . . .	80
6.6	Folding variant narrowing tree for the goal <code>flip(fix(2, e, flip(BG)))</code> . . .	81
6.7	Folding variant narrowing tree for the goal <code>flip(fix(2, e, flip(BG) ; BG')</code> . . .	87
6.8	Folding variant narrowing tree for the goal <code>flip(BG'')</code> . . . . .	87
6.9	Folding variant narrowing tree for the goal <code>flip(fix(2, e, flip(BG)))</code> . . .	87
