Table of contents

Abstract ................................................................. 7
Resumen ........................................................................... 9
Resum ............................................................................. 11
List of Figures ............................................................... 17
List of Tables ................................................................. 23

1 Introduction .................................................................. 25
  1.1 Background .......................................................... 25
  1.2 Funding ................................................................. 28
  1.3 Objectives of this dissertation ................................. 28
  1.4 List of Publications ............................................... 29

2 State of the Art ........................................................... 33
  2.1 Wireless Body Area Networks ................................. 33
    2.1.1 EM properties of the human tissues ......................... 34
    2.1.2 Scenarios in WBANs ............................................ 34
    2.1.3 Channel Characterization in WBANs ...................... 36
  2.2 Summary of proposed propagation channel models in the literature 42

3 System Description ....................................................... 47
  3.1 Measurements description ....................................... 47
    3.1.1 Laboratory Measurements .................................... 52
    3.1.2 In vivo measurements ......................................... 59
  3.2 Software simulations ............................................... 61

4 Methodology ............................................................... 63
# TABLE OF CONTENTS

4.1 Phantom-based measurements ........................................... 63  
4.1.1 Measurements performed with a large-square container .......... 64  
4.1.2 Measurements performed with an hexagonal container .......... 67  
4.1.3 Measurements performed with a small-squared container ....... 68  
4.1.4 Measurements performed with a tri-layer phantom container ... 70  
4.1.5 Summary of the phantom experiments .............................. 73  
4.2 \textit{In vivo} experiments ................................................. 75  
4.2.1 Summary of the \textit{in vivo} experiments ............................. 80  
4.3 Software simulations .................................................... 81  
5 Results for the Gastrointestinal scenario at the UWB frequency band 87  
5.1 In-body to On-body characterization via Path Loss models ....... 87  
5.1.1 Phantom container Case A and software simulations results .... 87  
5.1.2 Phantom Container Case Homogeneous results ................. 93  
5.1.3 \textit{In vivo} 1 and 2 and software simulations results ........... 96  
5.1.4 Effect of the antenna in the channel, through \textit{in vivo} measurements ......................................................... 108  
5.1.5 Antenna and phantom container comparison through phantom measurements ......................................................... 114  
5.1.6 Path Loss summary .................................................... 121  
5.2 Delay domain analysis .................................................... 124  
5.2.1 Theoretical Analysis .................................................. 124  
5.2.2 Power Delay Profile analysis ....................................... 125  
5.2.3 Analysis of the multipath components in the measurements127  
5.2.4 Time of arrival of the UWB signal .................................. 133  
5.2.5 Summary of the signal delay ....................................... 135  
6 Results for the Gastrointestinal scenarios for low UWB frequency signals 137  
6.1 S-parameters for low UWB signals .................................... 137  
6.2 System Loss for low Ultra Wide-band (UWB) signals .......... 138  
6.3 Summary ................................................................. 141  
7 Results for the cardiac scenarios at the UWB frequency band143  
7.1 S-parameters for cardiac scenarios ................................... 143  
7.2 Path loss for cardiac scenarios for the UWB frequency band .. 144  
7.3 Summary ................................................................. 146  
Conclusions and future work .................................................. 149
