Abstract	vii
Nomenclature	xiii
Contents	xvii
1 Introduction	1
1.1 Context and background . . . . .	2
1.2 Aims and scope . . . . .	7
1.3 Methodology . . . . .	10
1.4 Publications . . . . .	12
2 State of the art in TWC-based aftertreatment systems	13
2.1 Hardware evolution . . . . .	14
2.2 Electronic Engine Management Systems (EEMS) . . . . .	16
2.3 AFR and TWC control . . . . .	18

3	Experimental facility	27
3.1	Test bench	28
3.2	Internal combustion engine and aftertreatment components	29
3.3	Exhaust gas measurement	31
4	Modelling	37
4.1	One-Dimensional physics-based three-way catalyst modelling	38
4.2	Zero-Dimensional control-oriented modelling of three-way catalyst	57
5	Understanding of three-way catalyst behaviour	87
5.1	Oxygen storage in three-way catalyst	88
5.2	Effects of fresh air short-circuit on the aftertreatment system	96
5.3	Three-way catalyst behaviour during cold-start phase	112
6	Three-way catalyst control	129
6.1	Three-way catalyst stimulation through AFR control	130
6.2	Model-based control at transient conditions	144
6.3	AFR control under short-circuit conditions	157
7	Three-way catalyst ageing diagnosis	169
7.1	Model-based approach for three-way catalyst ageing quantification	170
7.2	Three-way catalyst ageing diagnosis through sensor-based strategy	185
8	Findings and conclusions	195
8.1	Main contributions	196
	Bibliography	203
