Abstract........................................................................................................................................................................ i
Resumen......................................................................................................................................................................... iii
Resum........................................................................................................................................................................... v
List of Figures............................................................................................................................................................... xi
List of Tables............................................................................................................................................................... xii
Acknowledgements ...................................................................................................................................................... xiii

Chapter 1: Introduction.................................................................................................................................................. 1
  1.1 Firm boundaries and innovation: research objectives and overview of studies ....... 3
     1.1.1 Study 1 – The determinants of cooperation and acquisition as modes of new product development ............................................................................................................................. 4
     1.1.2 Study 2 – The degree of novelty of product innovation: returns to R&D cooperation and contracting with universities ........................................................................... 5
     1.1.3 Study 3 – A comparative analysis of the returns to pecuniary and non-pecuniary modes of open innovation .............................................................................................. 6
  1.2 References ......................................................................................................................................................... 8

Chapter 2: Theoretical Background ......................................................................................................................... 13
  2.1 Defining innovation ............................................................................................................................................... 13
     2.1.1: Innovation as an outcome .............................................................................................................................. 14
     2.1.2 The process of innovation .............................................................................................................................. 19
  2.2 Knowledge and its production .............................................................................................................................. 25
  2.3 References ......................................................................................................................................................... 32
Chapter 3: Data and the Spanish National Innovation System

3.1 Data source: a panel survey of Spanish firms

3.2 The Spanish economy and national innovation system

3.3 References

Chapter 4: Methodological Approaches

4.1 Econometrics in management research: confronting the selection problem

4.2 Exploiting panel data to address the selection problem

4.3 The challenges of modelling limited dependent variables in a panel

4.4 The question of sample selection bias in panel data

4.5 The bootstrap: comparisons of the returns to innovation activities

4.6 Practical considerations: estimation of the models

4.7 Methodology in the context of innovation research

4.8 References

Chapter 5 (Study 1): Disentangling the Roles of R&D Capacity and Environmental Uncertainty as Determinants of New Product Development Mode

5.1 Introduction

5.2 Theory development and hypotheses

5.2.1 Transaction costs and environmental uncertainty

5.2.2 Firm resources

5.2.3 Appropriability and public spillovers

5.3 Data and methodology

5.3.1 Data source

5.3.2 Variables

5.3.3 Econometric approach

5.4 Empirical results

5.4.1 Descriptive analysis

5.4.2 Econometric results

5.5 Discussion and implications

5.6 Limitations and future research

5.7 References

5.8 Appendix
Chapter 6 (Study 2): Accessing Knowledge through Industry-University Interactions: The Effect of R&D Contracting and Cooperation on Product Innovation Novelty

6.1 Introduction

6.2 Literature review

6.2.1 R&D contracting and university-industry cooperation as innovation strategies

6.2.2 Novelty of the innovation outcome

6.3 Methodology

6.3.1 Exploiting panel data

6.3.2 Definition of the variables

6.3.3 Estimation approach

6.3.4 Descriptive statistics

6.4 Results

6.5 Discussion and implications

6.5.1 Relevance for practitioners

6.5.2 Limitations and future research

6.6 References

Chapter 7 (Study 3): Modes of Open Innovation in Service Industries and Process Innovation: A Comparative Analysis

7.1 Introduction

7.2 Theory development and hypotheses

7.2.1 Product and process innovation

7.2.2 Modes of inbound open innovation

7.2.3 Open innovation in service industries

7.2.4 Decreasing returns to openness

7.3 Data and empirical estimation

7.3.1 Data source

7.3.2 Exploiting panel data: accounting for unobserved firm heterogeneity

7.3.3 Dependent variables: measures for effect of product and process innovation

7.3.4 Covariates

7.3.5 Estimation procedure

7.4 Discussion of results
