| <b>LISTADO DE ARTÍCULOS.....</b>  | <b>23</b> |
| <b>ECUACIONES .....</b>   | <b>25</b> |
| <b>ABREVIATURAS .....</b>   | <b>27</b> |
| <b>I. INTRODUCCIÓN.....</b>   | <b>33</b> |
| I.1. Clasificación de polímeros. ....   | 35        |
| I.1.1. Polímeros de origen petroquímico no biodegradables. ....                       | 37        |
| I.1.2. Polímeros de origen petroquímico biodegradables. ....                          | 42        |
| I.1.3. Polímeros de origen renovables no biodegradables. ....                         | 44        |
| I.1.4. Polímeros de origen renovable biodegradables. ....                             | 45        |
| I.2. OBTENCIÓN Y TECNOLOGÍA DE POLIÉSTERES. ....                                      | 49        |
| I.2.1. Obtención de poliésteres.....  | 49        |
| I.2.2. Clasificación de poliésteres.....  | 50        |
| I.2.3. Degradación/desintegración de poliésteres. ....                                | 54        |
| I.2.4. Propiedades y aplicaciones de poliésteres. ....                                | 57        |
| I.2.5. Tecnología de ácido poliláctico (PLA). ....                                    | 59        |
| I.2.6. Tecnología de polihidroxialcanoatos (PHAs). ....                               | 62        |
| I.3. OBTENCIÓN Y TECNOLOGÍA DE POLIAMIDAS. ....                                       | 67        |
| I.3.1. Estructura y obtención de poliamidas. ....                                     | 67        |
| I.3.2. Clasificación y aplicaciones de poliamidas de origen petroquímico. .           | 69        |
| I.3.3. Obtención de biopoliamidas a partir de recursos renovables. ....               | 73        |
| I.3.4. Tecnología y aplicaciones de biopoliamidas.....                                | 76        |
| I.4. MODIFICACIÓN DE FORMULACIONES DE POLÍMEROS. ....                                 | 79        |
| I.4.1. Incorporación de aditivos. ....  | 80        |
| I.4.2. Mezclado industrial.....   | 81        |
| I.4.3. Extrusión reactiva y extensión de cadena. ....                                 | 83        |
| I.4.4. Incorporación de “fillers” y/o refuerzos. Green composites. ....               | 85        |
| I.5. ADITIVOS NATURALES EN FORMULACIONES DE POLÍMEROS. ....                           | 87        |
| I.5.1. Utilización de nanoarcillas. ....  | 87        |
| I.5.2. Compuestos fenólicos naturales. Extracción y tecnologías de encapsulación..... | 90        |
| I.5.3. Tecnología de aceites vegetales modificados.....                               | 97        |

|   |            |
|---|------------|
| I.6. MEZCLAS DE POLÍMEROS DE ALTO RENDIMIENTO MEDIOAMBIENTAL .....  | 103        |
| I.6.1. Mezclas binarias y ternarias de polímeros de origen renovable.....   | 103        |
| I.6.2. Compatibilización de mezclas poliméricas de alto rendimiento medioambiental .....  | 105        |
| <b>II. OBJETIVOS .....</b>  | <b>107</b> |
| II.1 OBJETIVO GENERAL .....   | 109        |
| II.2 OBJETIVOS PARCIALES .....  | 109        |
| <b>III. RESULTS &amp; DISCUSSION.....</b>   | <b>115</b> |
| III.1. BIOBASED POLYESTER MATERIALS WITH IMPROVED TOUGHNESS BY BLENDING AND REACTIVE EXTRUSION.....   | 121        |
| III.1.1. Melt grafting of sepiolite nanoclay onto poly(3-hydroxybutyrate-co-4-hydroxybutyrate) by reactive extrusion with multi-functional epoxy-based styrene-acrylic oligomer.....      | 123        |
| III.1.2. Ductility and Toughness Improvement of Injection-Molded Compostable Pieces of Polylactide by Melt Blending with Poly(e-caprolactone) and Thermoplastic Starch.....               | 149        |
| III.1.3. In Situ Compatibilization of Biopolymer Ternary Blends by Reactive Extrusion with Low-Functionality Epoxy-Based Styrene Acrylic Oligomer .....                                   | 175        |
| III.1.4. A comparative study on the effect of different reactive compatibilizers on injection-molded pieces of bio-based high-density polyethylene/polylactide blends.....                | 201        |
| III.2. POLY(LACTIC ACID) WITH IMPROVED TOUGHNESS BY NATURAL ADDITIVES AND FILLERS .....   | 227        |
| III.2.1. Enhancement of the mechanical and thermal properties of injection-molded polylactide parts by the addition of acrylated epoxidized soybean oil .....                             | 229        |
| III.2.2. Reactive toughening of injection-molded polylactide pieces using maleinized hemp seed oil.....   | 253        |
| III.2.3. On the use of acrylated epoxidized soybean oil as a reactive compatibilizer in injection-molded compostable pieces consisting of polylactide filled with orange peel flour ..... | 277        |
| III.2.4. Effect of different compatibilizers on injection-molded green composite pieces based on polylactide filled with almond shell flour .....   | 301        |
| III.2.5. Compatibilization of highly sustainable polylactide/almond shell flour composites by reactive extrusion with maleinized linseed oil .....  | 327        |
| III.3. USES AND APPLICATIONS OF NEW ENVIRONMENTALLY FRIENDLY BIOBASED POLYAMIDES.....   | 351        |

|  |            |
|--|------------|
| III.3.1. Evaluation of the engineering performance of different bio-based aliphatic homopolyamide tubes prepared by profile extrusion.....   | 353        |
| III.3.2. Injection-molded parts of fully bio-based polyamide 1010 strengthened by waste derived slate fibers pre-treated with glycidyl- and amino-silane coupling agents.....                    | 375        |
| III.3.3. Development of high-performance polyamide 1010/coconut fibers composites by reactive extrusion with natural and petrochemical derived compatibilizers.....                              | 399        |
| III.3.4. A comparative study on the reactive compatibilization of melt-processed polyamide 1010/polylactide blends by multi-functionalized additives derived from linseed oil and petroleum..... | 431        |
| <b>III.4. USES AND APPLICATIONS OF NEW ENVITONMENTALLY FRIENDLY PARTIALLY OR FULLY BIOBASED POLYAMIDES.</b> .....  | <b>463</b> |
| III.4.1. Optimization of microwave-assisted extraction of phenolic compounds with antioxidant activity from carob pods .....   | 465        |
| III.4.2. Bioactive Multilayer Polylactide Films with Controlled Release Capacity of Gallic Acid Accomplished by Incorporating Electrospun Nanostructured Coatings and Interlayers.....           | 485        |
| III.4.3. On the use of gallic acid as a natural antioxidant and ultraviolet light stabilizer in cast-extruded bio-based high-density polyethylene films .....                                    | 509        |
| III.4.4. Enhancement of the processing window and performance of polyamide 1010/bio-based high-density polyethylene blends by melt mixing with natural additives.....                            | 531        |
| <b>IV. CONCLUSIONES.....</b>   | <b>555</b> |
| IV.1. CONCLUSIONES PARCIALES.....  | 557        |
| IV.1.1. Con relación a poliésteres con impacto mejorado a través de mezclas y extrusión reactiva.....  | 557        |
| IV.1.2. Con relación a las formulaciones de ácido poliláctico con aditivos y cargas naturales. ....  | 558        |
| IV.1.3. Con relación a los usos y aplicaciones de nuevas poliamidas de alto rendimiento medioambiental procedentes de recursos renovables. ....  | 558        |
| IV.1.4. Con respecto a la utilidad del ácido gálico como aditivo funcional en formulaciones de polímeros y de mezclas.....   | 559        |
| IV.2. CONCLUSIONES GENERALES. ....   | 560        |
| <b>VI. REFERENCIAS .....</b>   | <b>563</b> |
| <b>VII. APÉNDICES .....</b>  | <b>581</b> |
| VII.1. ÍNDICE DE TABLAS. ....  | 583        |
| VII.2. ÍNDICE DE FIGURAS. ....   | 591        |
