

Table of contents

Abstract	xxxiii
Resumen	xxxvii
Resum	xli
Chapter 1: Introduction	1
1.1. Background and research justification	3
1.1.1. Fire modeling	3
1.1.2. Estimation of fuel attributes using discrete airborne laser scanning	9
1.1.3. Full-waveform airborne laser scanning	11
1.2. Aims and objectives	12
1.3. Thesis outline	15
Chapter 2: Influence of methodological parameters on full-waveform ALS metrics and forest attributes prediction	19
2.1. Introduction	21
2.2. Study area and data	28
2.3. Methods	30
2.3.1. Radiometric correction and waveform denoising	30
2.3.2. Pulse density reduction	34
2.3.3. Voxelization	35
2.3.4. Extraction of ALS _{FW} metrics	40

2.3.5. Analysis of the influence of side-lap effect on ALS _{FW} metrics	41
2.3.5.1. Variation of ALS _{FW} metrics related to pulse density	41
2.3.5.2. Variation of ALS _{FW} metrics according to voxel size and assignation value	44
2.3.6. Analysis of the influence of side-lap effect on the estimate of forest attributes	45
2.4. Results	47
2.4.1. Analysis of the influence of side-lap effect on ALS _{FW} metrics	47
2.4.1.1. Variation of ALS _{FW} metrics related to pulse density	47
2.4.1.2. Variation of ALS _{FW} metrics according to voxel size and assignation value	54
2.4.2. Analysis of the influence of side-lap effect on the estimate of forest attributes	55
2.5. Discussion	59
2.6. Conclusions	63
Chapter 3: Creating a full-waveform airborne laser scanning metric extraction tool (<i>WoLFeX</i>), and analyzing the influence of scan angle and radiometric correction on metrics and forest fuel attribute estimates	65
3.1. Introduction	67
3.2. ALS _{FW} data processing	70
3.3. Software tool	81

3.4. Case of study: Influence of radiometric correction and forest fuel modeling	83
3.4.1. Material and methods	83
3.4.2. Results and discussion	87
3.5. Conclusions	89

Chapter 4: Comparative assessment of the vertical distribution of forest components using full-waveform airborne, discrete airborne and discrete terrestrial laser scanning	94
--	-----------

4.1. Introduction	96
4.2. Material and methods	100
4.2.1. Study areas	100
4.2.2. Forest plots	101
4.2.3. Laser scanning data	104
4.2.4. Overview of the methods	106
4.2.5. Data processing	108
4.2.5.1. Denoising	108
4.2.5.2. XY co-registration	108
4.2.6. Estimating voxel sampling variables and the rate of pulse reduction	109
4.2.7. Extracting vertical forest distribution and rate of pulse reduction profiles	111
4.2.8. Classifying the vertical distribution of understory vegetation from ALS data	112
4.3. Results	115

4.3.1. Forest vertical distribution and rate of pulse reduction profiles	115
4.3.2. Understory characterization from ALS	119
4.3.3. Understory vegetation density classification	122
4.4. Discussion	124
4.5. Conclusions	130

Chapter 5: Characterization of understory vegetation using full-waveform airborne laser scanning and voxel-based metrics **131**

5.1. Introduction	133
5.2. Study area and data	138
5.3. Methods	139
5.3.1. XY co-registration of ALS _{FW} and TLS datasets	141
5.3.2. Height normalization	141
5.3.3. Denoising	141
5.3.4. Extraction of understory point cloud	141
5.3.5. Voxelization	142
5.3.6. Extraction of ALS _{FW} metrics	142
5.3.7. Extraction of understory attributes from TLS	143
5.3.8. Linear regression models	144
5.3.9. Linear mixed-effect models	147
5.4. Results	147
5.5. Discussion	151
5.6. Conclusions	155

Chapter 6: Final conclusions	157
6.1. Answers to the original research questions	159
6.2. Further research	166
