Contents

1 Introduction **1**
- 1.1 Introduction . . . 2
- 1.2 Background and research justification . . . 3
- 1.3 Objectives . . . 6
- 1.4 Case study . . . 8
- 1.5 Materials . . . 9
- 1.6 Document structure . . . 11

2 Software development: pyColourimetry **15**
- 2.1 Introduction . . . 16
- 2.2 Colorimetric hardware/software vs open source tools . . . 18
- 2.3 pyColourimetry Modules . . . 22
  - 2.3.1 Graphical User Interface (GUI) . . . 23
  - 2.3.2 Serial port communication . . . 25
  - 2.3.3 Colorimetric data treatment . . . 26
- 2.4 Camera characterization procedure . . . 28
- 2.5 Conclusions . . . 30

3 Image-based camera characterization **31**
- 3.1 Introduction . . . 32
- 3.2 CIE Color spaces . . . 34
  - 3.2.1 CIE XYZ . . . 34
  - 3.2.2 CIELAB . . . 35
  - 3.2.3 Color difference ΔE^*_{ab} . . . 36
- 3.3 Material and Methods . . . 37
  - 3.3.1 Image data . . . 37
  - 3.3.2 Data processing workflow . . . 38
  - 3.3.3 First stage: Characterization of the digital camera . . . 39
  - 3.3.4 Second stage: Transformation to sRGB space . . . 40
  - 3.3.5 RAW data processing . . . 41

3.4 Results . . . 42
3.4.1 TIFF data results . . . 43
3.4.2 RAW data results . . . 45
3.5 Discussion . . . 47
3.6 Conclusion . . . 48

4 A Gaussian Process Model for Camera Characterization 51
4.1 Introduction . . . 52
4.2 Materials and Methods . . . 53
4.2.1 Case Study: Cova dels Cavalls . . . 53
4.2.2 Image-Based Camera Characterization Methodology . . . 53
4.2.3 Gaussian Processes for Camera Characterization . . . 55
4.2.4 Second-Order Polynomial Model . . . 57
4.2.5 Model Checking and Comparison . . . 59
4.2.6 Induced Noise Analysis . . . 59
4.3 Results and Discussion . . . 60
4.3.1 Model Performance Assessment . . . 60
4.3.2 Output sRGB Characterized Images . . . 68
4.3.3 ΔE^*_{ab} Mapping Images . . . 68
4.3.4 Rock Art Specimen Detail Images . . . 70
4.4 Conclusions . . . 72

5 Patch Adaptive Selection with *K*-Means (P-ASK) 73
5.1 Introduction . . . 75
5.2 Materials and Methods . . . 76
5.2.1 Data set acquisition . . . 76
5.2.2 Colorimetric camera characterization procedure . . . 77
5.2.3 K-means clustering technique . . . 79
5.2.4 Color patch adaptive selection with K-means (P-ASK) . . . 81
5.3 Results . . . 84
5.3.1 Setting the optimal parameters for the K-means clustering algorithm . . . 84
5.3.2 Test on the DigiEye imaging system . . . 89
5.3.3 Assessment of the P-ASK framework on rock art images . . . 90
5.3.4 Model accuracy assessment of the image-based characterization . . . 92
5.3.5 Output sRGB characterized images . . . 93
5.4 Discussion . . . 95
5.5 Conclusions . . . 96

6 Discussion **97**
6.1 Introduction . . . 98
6.2 D65 Illuminant hypothesis . . . 98
6.3 RAW vs processed image files . . . 101
6.4 Regression model . . . 104
6.5 Negative CIE XYZ predicted values . . . 107
6.6 Sample selection . . . 110
6.7 Spectral recovery . . . 115

7 Conclusions **119**
7.1 Initial objectives set and questions raised . . . 120
7.1.1 Question: Is the camera characterization a suitable procedure for cultural heritage documentation and preservation tasks? . . . 120
7.1.2 Question: Could the GP model provide better results as a regression model for camera characterization? . . . 121
7.1.3 Question: Is the full set of chips from the color checker needed for model learning in the characterization procedure? . . . 121
7.2 Key findings and research contribution . . . 122
7.3 Remaining research challenges . . . 124
