

UNIVERSITAT POLITÈCNICA de VALÈNCIA  
UNIVERSITAT IBN TOFAIL de KENITRA

**Study and Characterization of  
Hybrid Perovskites and Copper-Indium-Gallium selenide thin films  
for Tandem Solar Cells**

Author

**Amal Bouich**

A dissertation Submitted for the degree of Doctor of Philosophy.

Supervised by: Prof Dr. Bernabé Marí Soucase  
Prof Dr. Mohammed Ebn Touhami

Departamento de Física Aplicada-IDF  
Universitat Politècnica de Valencia (Spain)

SEPT 2020

## Table of Contents

Symbols.....	5
Figures.....	7
Tables.....	11
Acknowledgements .....	13
Dedication .....	15
Summary of thesis .....	17
Resumen (Castellano) .....	19

# Chapter I:

## Overview of Solar Cells Applications

### Contents

1. Photovoltaics:.....	28
1.1. Global energy challenge.....	28
1.2. Solar energy:.....	29
1.3. Photovoltaics energy: .....	29
1.4. Solar Cell Technology.....	30
1.4.1. First generation: crystalline Si solar cells.....	30
1.4.2. Second PV Generation: thin film solar cells.....	31
1.4.3. 3rd Generation PV: perovskite solar cells .....	31
2. CIGS Solar cells.....	32
2.1. CIGS materials: .....	32
2.2. Cu(In,Ga)Se <sub>2</sub> solar cells .....	33
2.3. Energy band diagram of Cu(In,Ga)Se <sub>2</sub> solar cells. ....	33
3. perovskites solar cells: .....	33
3.1. perovskite materials.....	33
3.2. Typical perovskite solar cells .....	35
3.3. Stability challenge .....	37

4. Physics proprieties of solar cells:.....	38
4.1. Air Mass: .....	38
4.2. Electronic properties of material .....	39
4.3. Direct and indirect bandgap semiconductors .....	39
5. Thesis objectives and organization .....	39

# Chapter II:

## Experimental procedures and Characterization techniques of CIGS and Perovskite Solar cells

### Contents

1. Experimental Techniques.....	54
1.1. Electrochemical Deposition of the absorber CIGS thin films.....	54
1.2. Chemical Bath Deposition (CBD) for buffer layer CdS deposition:.....	55
1.3. Elaboration of ABX <sub>3</sub> perovskite thin films by Spin coating .....	56
1.4. Elaboration of CIGS thin films by spray pyrolysis: .....	57
2. characterization techniques .....	58
2.1. X-ray Diffraction analysis (XRD).....	58
2.2. Field emission Scanning Electron Microscopy (FESEM) .....	60
2.3. Energy-dispersive Spectroscopy (EDS) .....	60
2.4. Raman spectroscopy .....	61
2.5. Atomic Force Microscopy (AFM) .....	62
2.6. Transmission electron microscopy (TEM) analysis.....	63
2.7. UV- Visible Spectroscopy.....	64

2.8. Current-Voltage (J-V) Measurements ..... 65

# Chapter III:

## Copper-indium-Gallium-disulfide (CIGS) thin films grown by electrochemical deposition for solar cells

### Contents

1. Investigation of CIGS and CIS grown by one-step electrodeposition technique .....	71
1.1. Cyclic voltammetry (CV).....	71
1.2. Annealing Treatments .....	72
2. Deposit CuInGaS <sub>2</sub> thin film on different backs contacts .....	72
2.1. CuInGaS <sub>2</sub> thin film grown by one step electrodeposition: .....	72
2.2. structural and morphology proprieties CuInGaS <sub>2</sub> grown by one step electrodeposition .....	73
2.2.1. Structural measurements:.....	73
2.2.2. Morphology analysis: .....	74
2.2.3. TEM analysis:.....	75
2.2.4. AFM analysis:.....	76
2.3. Optical proprieties CuInGaS <sub>2</sub> grown by one step electrodeposition.....	77
2.3.1. Optical transmittance and absorbance: .....	77
2.3.2. energy band gap .....	78
2.3.3. Optical constants:.....	79
2.3.4. Optical conductivity: .....	80

# Chapter IV

## Copper-indium-Gallium disulfide (CIGS) thin films grown by Spray pyrolysis for solar cells.

### Contents

1. Investigation of CIGS and CIS grown by Spray pyrolysis .....	86
2. Investigation of structural and morphological properties of CIGS grown by Spray pyrolysis .....	86
2.1. structural proprieties of CIS and CIGS .....	86
2.2. Morphology proprieties of CIS and CIGS .....	87
3. Investigation of optical properties of polycrystalline CIGS grown by Spray pyrolysis technique. ....	88
3.1. Absorbance, transmittance and gap energy of CIGS grown by Spray pyrolysis technique. ....	88
3.2. Optical constants of CIGS grown by Spray pyrolysis technique. ....	90
4. Suitable annealing time of Copper-indium Gallium disulfide (CIGS) thin films grown by Spray pyrolysis .....	92
4.1. Copper-indium Gallium disulfide (CIGS) thin films grown by Spray pyrolysis .....	92
4.2. structural and morphology properties of Copper-indium Gallium disulfide (CIGS) thin films grown by Spray pyrolysis.....	93
4.2.1. XRD analysis of (CIGS) thin films grown by Spray pyrolysis .....	93
4.2.2. SEM analysis of (CIGS) thin films grown by Spray pyrolysis .....	95
4.2.3. TEM analysis of (CIGS) thin films grown by Spray pyrolysis .....	96
4.2.4. AFM analysis of (CIGS) thin films grown by Spray pyrolysis .....	97

4.3. Optical and electrical proprieties of (CIGS) thin films grown by Spray pyrolysis: ....	99
4.3.1. Absorbance, transmittance and gap energy: .....	99
4.3.2. Optical constants:.....	101
4.4. Electrical properties.....	102
5. Simulation performance of CIGS grown by Spray pyrolysis technique.....	103
5.1. Simulation of the performance of CIGS grown by spray pyrolysis technique .....	105
5.1.1. Effect of the band gap.....	105
5.1.2. Effects of operating temperature on the performance of CIGS solar cells.....	107
5.1.3. Effect of shallow acceptor density on the performance of the CIGS cell .....	108

## Chapter V

# Manufacture of CdZnS/CdS/CIGS/Mo solar cells performance.

### Contents

1. Realization of CIGS solar cell .....	113
2. Structural and morphology of CdS buffer layer and CIGS absorber layer .....	114
3. Optical proprieties of CdS buffer layer and CIGS absorber layer: .....	117
4. CIGS-based Solar Cell: .....	118

# Chapter VI

## Synthesis and characterization of Methylammonium Lead Iodide (MAPbI<sub>3</sub>) perovskite

### Contents

1. The Study of MAPbI <sub>3</sub> Perovskite Thin Films.....	123
1.1. Film Preparation of MAPbI <sub>3</sub> with different amount of antisolvent perovskite films.....	123
1.2. Structural and morphological analysis of MAPbI <sub>3</sub> Perovskite Thin Films.....	125
1.3. Optical properties of APbX <sub>3</sub> (A=MA, FA, Cs; X =Br, I) perovskite films. ....	130
2. Degradation study of MAPbI <sub>3</sub> .....	131
3. Methylammonium lead triiodide MAPbI <sub>3</sub> doping by Tetrabutylammonium (TBA) Perovskites Thin films. ....	134
3.1. Film Preparation of MAPbI <sub>3</sub> doped Tetrabutylammonium perovskite films.....	135
3.2. Structural and morphological analysis of MAPbI <sub>3</sub> doped Perovskite Thin Films	135
3.3. Optical properties of MAPbI <sub>3</sub> doped TBA perovskite films.....	127
4. Degradation study of MAPbI <sub>3</sub> doped TBA:.....	142
5. Methylammonium lead triiodide MAPbI <sub>3</sub> doping by Rb Li Cs Perovskites Thin films.	145

# Chapter VII

## Synthesis and characterization of Formamidinium lead triiodide FAPbI<sub>3</sub> perovskite.

1. Film Preparation of FAPbI <sub>3</sub> doped Guanidinium perovskite films.....	141
1.1. Materials:.....	141
1.2. Thin films preparation.....	141
1.3. Characterization techniques: .....	142
1.4. Structural and morphological analysis of FAPbI <sub>3</sub> doped GA Perovskite Thin Films	142
1.5. Optical analysis of FAPbI <sub>3</sub> doped GA Perovskite Thin Films.....	146
2. Degradation mechanism of FAPbI <sub>3</sub> and GA doped FAPbI <sub>3</sub> Perovskite Thin Films.....	148

# Chapter VIII

## Work Outlook: tandem perovskite/CIGS

1. Perovskite Top Cell Preparation: .....	157
1.1. Back contact Etching:.....	157
1.2. Back Contact Cleaning:.....	158
1.3. TiO <sub>2</sub> compact layer: .....	158
1.4. TiO <sub>2</sub> Mesoporous layer:.....	159
1.5. MAI Powder Synthesis:.....	159
1.6. Perovskite MAPbI <sub>3</sub> layer:.....	160
1.7. Spiro-MeOTAD layer: .....	160

2. CIGS Bottom Cell Preparation: .....	161
3. Perovskite/CIGS multijunction: .....	161
