

# Table of contents

<b>Acronyms</b>	<b>v</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Background	1
1.1.1 Fifth Generation (5G) wireless standard	2
1.1.2 Air Interface Harmonization	7
1.2 State of the art	9
1.3 Objectives and Thesis scope	10
1.4 Thesis outline and main contributions	10
1.5 Publications	11
<b>2 5G Waveform Candidates</b>	<b>13</b>
2.1 OFDM-based Solutions	13
2.1.1 Harmonized/flexible CP-OFDM	16
2.1.2 Universal Filtered MultiCarrier (UFMC)	16
2.1.3 Windowed-OFDM (W-OFDM)	21
2.1.4 Pulse Shaped OFDM (P-OFDM)	22
2.2 FBMC-based Solutions	26
2.2.1 OQAM-FBMC	27
2.2.2 QAM-FBMC	28
2.3 Conclusions	29
<b>3 Waveform Implementation and Comparison</b>	<b>31</b>
3.1 Waveform Implementation	31
3.1.1 Software Defined Radio Platform: WARPLab	32
3.1.2 MATLAB Code Implementation	33
3.2 V2V Performance Comparison	38
3.2.1 V2V Scenario	39
3.2.2 Waveform Comparison	40

## TABLE OF CONTENTS

---

3.3	Conclusions . . . . .	43
<b>4</b>	<b>Waveform Harmonization</b>	<b>45</b>
4.1	General framework . . . . .	47
4.1.1	Transmitted signal . . . . .	47
4.1.2	Received signal . . . . .	49
4.2	Multicarrier waveforms . . . . .	50
4.2.1	CP-OFDM variants . . . . .	50
4.2.2	FBMC variants . . . . .	51
4.3	Implementation Aspects . . . . .	52
4.3.1	Harmonized transceiver design . . . . .	52
4.3.2	Fast Fourier transform implementation . . . . .	54
4.3.3	Filter bank implementation through a PPN . . . . .	56
4.4	Complexity of Waveforms . . . . .	57
4.4.1	Complexity of CP-OFDM . . . . .	58
4.4.2	Complexity of W-OFDM . . . . .	58
4.4.3	Complexity of P-OFDM . . . . .	59
4.4.4	Complexity of QAM-FBMC . . . . .	59
4.4.5	Complexity of OQAM-FBMC . . . . .	60
4.4.6	Complexity comparisons . . . . .	61
4.5	Complexity of Harmonized and Nonharmonized Implementations	63
4.5.1	Complexity of the proposed harmonized systems . . . . .	63
4.5.2	Complexity of the non-harmonized systems . . . . .	64
4.5.3	Complexity comparisons . . . . .	64
4.6	Conclusions . . . . .	64
<b>5</b>	<b>5G OFDM Numerologies</b>	<b>67</b>
5.1	ICI and ISI Analysis . . . . .	68
5.1.1	Insufficient Cyclic Prefix . . . . .	69
5.1.2	Doppler Spread . . . . .	71
5.1.3	Unified Interference Model . . . . .	72
5.2	5G NR Numerology . . . . .	73
5.3	Performance Results . . . . .	75
5.4	Conclusions . . . . .	80
<b>6</b>	<b>From 5G to 6G</b>	<b>81</b>
6.1	Vision on the Use Cases . . . . .	82
6.1.1	Ultra Mobile Broadband . . . . .	83
6.1.2	Enhanced Ultra Reliable Low Latency Communications	85
6.1.3	Ambient Internet . . . . .	86
6.1.4	Holographic call . . . . .	87

## TABLE OF CONTENTS

---

6.2	Cell-less Deployment . . . . .	87
6.3	Network Everywhere . . . . .	90
6.3.1	Radio-stripes . . . . .	90
6.3.2	Focused and seamless wireless charging . . . . .	91
6.3.3	Terahertz . . . . .	92
6.4	Federated AI-based Network . . . . .	92
6.4.1	Quantum computing for the federated DL process . . . . .	93
6.5	Conclusions . . . . .	94
<b>7</b>	<b>Conclusions</b>	<b>95</b>
7.1	Concluding Remarks . . . . .	95
7.2	Future Research Lines . . . . .	98
	<b>Appendices</b>	<b>101</b>
A	Waveform Implementation Code and Results . . . . .	101
A.1	OFDM Code . . . . .	101
A.2	UFMC Code . . . . .	108
A.3	FBMC Code . . . . .	126
B	Total Interference Graphs per Scenario . . . . .	137
