

Index

1	<i>General Introduction</i>	2
1.1	Catalysis	2
1.1.1	Homogeneous catalysis	3
1.1.2	Heterogeneous catalysis	5
1.1.3	Biocatalysis	6
1.1.4	TON and TOF	7
1.2	Platinum Group Metals (PGMs)	8
1.2.1	Sources of PGMs	8
1.2.2	Physicochemical characteristics of PGMs	10
1.2.3	Applications of Pt and Pd	12
1.3	The size matters: from nanoparticles to single atoms	14
1.3.1	Metal clusters: synthesis and characterization	15
1.3.2	Metal clusters: catalytic applications	21
1.3.3	Single atoms: synthesis and characterization	24
1.3.4	Single atoms: catalytic applications	27
1.4	Supramolecular Coordination Complexes (SCCs)	32
1.4.1	Synthesis of SCCs	34
1.4.2	Applications of SCCs	36
1.5	Metal-Organic Frameworks (MOFs)	39
1.5.1	Synthesis of MOFs	41
1.5.2	Applications of MOFs	42

1.5.2.1	MOFs as supports in catalysis	44
1.6	References	47
2	<i>Objectives</i>	75
3	<i>Materials and Methods</i>	78
3.1	Materials	78
3.2	Characterization Techniques	78
3.2.1	Qualitative and quantitative analysis of organic molecules	78
3.2.2	Spectroscopies	80
3.2.3	Other techniques	84
3.3	Experimental procedures	86
3.3.1	Catalytic activity of palladium supramolecular complexes within metal-organic frameworks (MOFs)	86
3.3.2	Perfluorinated palladium catalysts for the direct catalytic oxidation of alkyl alcohols to carboxylic acids	92
3.3.3	Palladium single atoms for the direct catalytic oxidation of benzyl alcohols to carboxylic acids	94
3.3.4	Subnanometric aqueous metal clusters as antitumoral agents	96
3.4	Characterization of isolated compounds	99
3.5	References	104
4	<i>Catalytic activity of palladium supramolecular complexes within Metal-Organic Frameworks (MOFs)</i>	109
4.1	Introduction	109
4.2	Synthesis and characterization of the SCCs@MOF catalysts	

4.3	Catalysis with SCCs@MOF	126
4.3.1	Homocoupling of thienylboronic acids	126
4.3.1.1	Catalytic results	126
4.3.1.2	Mechanistic studies	129
4.3.2	Homo- and cross-coupling of alkynes	135
4.3.2.1	Catalytic results	135
4.3.2.2	Mechanistic studies	138
4.4	Conclusions	142
4.5	References	143
5	<i>Perfluorinated palladium catalysts for the direct catalytic oxidation of alkyl alcohols to carboxylic acids</i>	157
5.1	Introduction	157
5.2	Catalytic results	160
5.2.1	Homogeneous catalysts: Pd(OAc)₂ and substituted pyridines	160
5.2.2	Heterogeneous catalysts: SCCs@MOF	167
5.3	Conclusions	173
5.4	References	174
6	<i>Palladium single atoms for the direct catalytic oxidation of benzyl alcohols to carboxylic acids</i>	181
6.1	Introduction	181
6.2	Catalysis with Pd single atoms in solution	183
6.2.1	Catalytic results	183

6.2.2	Characterization of single atoms in solution _____	186
6.2.3	Mechanism of the oxidation reaction catalyzed by single atoms in solution _____	190
6.3	Catalysis with Pd clusters and nanoparticles _____	193
6.4	Catalysis with Pd SACs supported on a cysteine-based MOF 195	
6.4.1	Synthesis and characterization of Pd SACs supported on a cysteine-based MOF _____	196
6.4.2	Catalysis with Pd SACs supported on a cysteine-based MOF 207	
6.4.3	Mechanistic studies of the oxidation reaction catalyzed by Pd SACs supported on a cysteine-based MOF _____	212
6.5	Reaction scope _____	212
6.6	Conclusions _____	214
6.7	References _____	215
7	<i>Subnanometric aqueous metal clusters as antitumoral agents</i> _____	226
7.1	Introduction _____	226
7.2	Synthesis and characterization of aqueous metal clusters	230
7.2.1	Synthesis of metal clusters _____	230
7.2.2	Characterization of metal clusters _____	231
7.3	Antitumoral activity of aqueous metal clusters _____	244
7.3.1	Cell death mechanism _____	248
7.3.2	Mechanism of action of metal clusters _____	251
7.4	Antitumoral activity of aqueous metal clusters towards	

	cisplatin-resistant cells	258
7.5	Conclusions	259
7.6	References	260
8	<i>General conclusions</i>	272
