<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Scope of this thesis and global objective . . . . .	1
1.2	Starting hypothesis and proposed methodology . . . . .	2
1.3	Specific objectives . . . . .	4
1.4	Layout of this work . . . . .	5
<b>2</b>	<b>Problem statement: Continuous Glucose Monitoring</b>	<b>7</b>
2.1	Introduction to Diabetes Mellitus . . . . .	7
2.1.1	Numbers and estimations . . . . .	8
2.1.2	Glucose homeostasis . . . . .	10
2.1.3	Alterations by diabetes . . . . .	13
2.1.4	Complications of the disease . . . . .	15
2.2	Research on Diabetes and its Treatment . . . . .	16
2.2.1	The discovery of insulin . . . . .	16
2.2.2	Developing a treatment for DM1 . . . . .	17
2.2.3	Current Research . . . . .	20
2.3	Continuous Glucose Monitoring . . . . .	24
2.3.1	Generalities . . . . .	24
2.3.2	Minimally invasive CGMS . . . . .	26
2.3.3	Calibration algorithms: State of Art . . . . .	27
2.3.4	Difficulties for advancing in the field . . . . .	37
2.4	Discussion and conclusions . . . . .	38
<b>3</b>	<b>Clustering techniques for modeling local behavior</b>	<b>41</b>
3.1	Introduction . . . . .	41
3.1.1	Advantages of local modeling . . . . .	41

3.1.2	General concepts . . . . .	42
3.1.3	Local Modeling technique selection . . . . .	42
3.2	Clustering technique review . . . . .	44
3.2.1	Clustering Steps . . . . .	44
3.2.2	Notation and Concepts . . . . .	45
3.2.3	Data Types . . . . .	45
3.2.4	Similarity/Dissimilarity Measures . . . . .	46
3.2.5	Types of Membership . . . . .	51
3.2.6	Normalization . . . . .	53
3.2.7	Classification of clustering . . . . .	55
3.2.8	Definition of the cost index . . . . .	57
3.3	Relevant algorithms for clustering . . . . .	58
3.3.1	Numerical algorithms . . . . .	58
3.3.2	Categorical algorithms . . . . .	63
3.3.3	Mixed data algorithms . . . . .	63
3.4	Clustering algorithms for systems modeling . . . . .	64
3.4.1	Advantages and drawbacks of these algorithms . . . . .	70
3.5	Conclusions . . . . .	71
<b>4</b>	<b>A new approach for local modeling: PNCRM</b>	<b>73</b>
4.1	Introduction . . . . .	73
4.2	Characteristics desired to be included in the glucose transport model	75
4.2.1	Pre-fixed shaped membership function . . . . .	76
4.3	New cost index definition . . . . .	81
4.3.1	Parameters tuning . . . . .	84
4.4	Iterative index optimization . . . . .	85
4.5	Optimization methods . . . . .	86
4.5.1	Computational optimization techniques . . . . .	88
4.5.2	Global optimization . . . . .	89
4.6	Selection of global solver for PNCRM . . . . .	90
4.7	General performance of PNCRM . . . . .	93
4.7.1	Considerations before application . . . . .	94
4.7.2	Unidimensional systems . . . . .	95
4.7.3	Multidimensional System . . . . .	103
4.7.4	Analysis of the performance . . . . .	107
4.8	Conclusions . . . . .	108

<b>5</b>	<b>A PNCRM-based calibration algorithm for CGMS</b>	<b>111</b>
5.1	Introduction . . . . .	111
5.1.1	Context definition . . . . .	111
5.2	Proposed structure for CA . . . . .	112
5.3	Adaptation of PNCRM to glucose transport modeling . . . . .	114
5.3.1	Measures of performance . . . . .	116
5.3.2	Model's saturation . . . . .	117
5.4	Data description . . . . .	117
5.5	Modeling the relationship between PG and sensor's signal . . . . .	119
5.5.1	Selection of the system inputs . . . . .	119
5.5.2	Outliers detection . . . . .	120
5.5.3	Model structure identification . . . . .	121
5.5.4	Consideration of exogenous signals . . . . .	121
5.5.5	Results . . . . .	123
5.6	Inter-patient variability of sensor's sensitivity compensation . . . . .	124
5.6.1	Data preprocessing and model structure identification . . . . .	125
5.6.2	Results . . . . .	126
5.7	Discussion . . . . .	135
5.8	Conclusions . . . . .	138
<b>6</b>	<b>Adaptive calibration algorithm</b>	<b>139</b>
6.1	Motivation . . . . .	139
6.2	Data characteristics . . . . .	140
6.2.1	Sensitivity variations . . . . .	140
6.2.2	Information available . . . . .	142
6.3	Framework . . . . .	143
6.4	Selection of the optimization technique . . . . .	145
6.5	Application of the gradient method . . . . .	146
6.5.1	Equation to minimize . . . . .	146
6.5.2	Parameter tuning . . . . .	148
6.5.3	Window of samples . . . . .	149
6.6	Considerations for validation . . . . .	151
6.7	Model identification with real data set . . . . .	152
6.7.1	Clinical data study . . . . .	152
6.7.2	Considerations . . . . .	153
6.7.3	Model identification with set normalization . . . . .	153
6.7.4	Model identification with individual normalization . . . . .	154
6.8	Validation of the adaptive calibration algorithm . . . . .	156
6.8.1	Application to real data . . . . .	156
6.8.2	Application to in silico data . . . . .	159

6.9	Comparison of results from both studies . . . . .	165
6.10	Conclusions . . . . .	166
6.11	Discussion . . . . .	168
<b>7</b>	<b>Conclusions</b>	<b>171</b>
7.1	Conclusions . . . . .	171
7.2	Contributions . . . . .	173
7.3	Publications . . . . .	174
7.4	Future Work . . . . .	176
<b>A</b>	<b>Equations for normalization and denormalization</b>	<b>179</b>
A.1	Variables normalization . . . . .	179
A.2	Output denormalization . . . . .	180
A.3	Denormalization of local estimations . . . . .	180
A.4	Denormalization of model parameters . . . . .	182
A.4.1	Parameters of membership functions . . . . .	182
A.4.2	Regression coefficients . . . . .	184
A.4.3	Observations . . . . .	186
