

The installation of the glass wall is made by a subcontractor.

The horizontal structure is going to be fixed to the foundation, like the splicing channels, those are the supports for the mullions who will be put after. For the perfect fixation of the glass wall structure, it will have a fixation on the vertical face of the foundation, with the appropriate waterproofing sheet for preventing damages to that.

For the best thermal conditioning, the glass will have 3 layers, 2 of dobleglass (4+4 mm.) and an air chamber between them (16 mm.).

FINAL PROJECT OF BUILDING ENGINEERING			
PROJECT		ADDRESS:	
Sint-Barbara College - SITE PARKING		Savaanstraat 98-100 B-9000 Gent
