<b>Summary (English) .....</b>	<b>IX</b>
<b>Summary (Italian).....</b>	<b>XI</b>
<b>Summary (Spanish).....</b>	<b>XIII</b>
<b>Summary (Valencian) .....</b>	<b>XV</b>
<b>Contents .....</b>	<b>XVII</b>
<b>List of Figures.....</b>	<b>XXIII</b>
<b>List of Tables .....</b>	<b>XXIX</b>
<b>1. Introduction.....</b>	<b>1</b>
1.1. Meeting the future food demand .....	3
1.1.1. Crop production in greenhouses .....	3
1.1.2. Animal production in livestock houses.....	5
1.2. Problem statement, aim and approach.....	6
1.2.1. The need of a transition toward sustainability .....	6
1.2.2. Aim of the thesis .....	7
1.2.3. Thesis outline and adopted approaches.....	7
<b>2. Climate control in agricultural buildings: a tangle of relations .....</b>	<b>9</b>
2.1. Climate control: a tangle of relations .....	11
2.2. Unpicking the tangle of relations: greenhouses.....	11
2.2.1. Analyzed works.....	12
2.2.2. The central role of climate control in greenhouses .....	14
Climate control and productivity .....	14
Climate control and water use.....	15
Climate control and health.....	16
Climate control and energy use.....	16
2.3. Unpicking the tangle of relations: livestock houses .....	18

2.3.1. Analyzed works.....	18
2.3.2. The central role of climate control in livestock houses.....	21
Climate control and animal welfare .....	21
Climate control and air emissions .....	23
Climate control and productivity.....	24
Climate control and health .....	25
Climate control and energy use .....	28
2.3.3. Further considerations about climate control in livestock houses .....	29
2.4. Final considerations .....	31
<b>3. The nexus between climate control and energy: results from case studies</b>	
<b>33</b>	
3.1. The need of an experimental approach .....	35
3.1.1. Literature background .....	35
3.1.2. Overview on the performed monitoring campaigns .....	37
3.2. Greenhouse monitoring campaign .....	37
3.2.1. Case study description.....	37
3.2.2. Monitoring campaign description .....	40
3.2.3. Main results from the monitoring campaign .....	42
Analyses of the monitored indoor climate conditions .....	42
Analyses of the monitored electrical power absorbed by fans .....	46
3.3. Livestock house monitoring campaign .....	49
3.3.1. Case study description.....	49
3.3.2. Monitoring campaign description .....	51
3.3.3. Main results from the monitoring campaign .....	54
Analyses of the monitored indoor climate conditions .....	54
Analyses of the monitored electrical power .....	59
3.4. Final considerations .....	66
3.5. Chapter nomenclature .....	66
<b>4. A new modelling framework for fully mechanically controlled greenhouses .....</b>	<b>69</b>
4.1. The need of a numerical approach.....	71
4.2. Overview on greenhouse modelling issues.....	72
4.3. Model structure .....	74
4.3.1. Literature background on existing greenhouse models .....	74
4.3.2. Model workflow .....	78
4.3.3. Calculation modules.....	80
Preliminary calculation module .....	80
Solar radiation module .....	80
Plant transpiration module .....	81
Thermal balance module .....	83

Moisture balance module .....	85
Heating system module.....	86
Cooling pad efficiency module .....	86
Dehumidification ventilation system module .....	87
Cooling ventilation system module.....	91
<b>4.4. Model calibration and validation.....</b>	<b>95</b>
<b>4.4.1. Calibration and validation overview .....</b>	<b>95</b>
<b>4.4.2. Case study .....</b>	<b>96</b>
Case study description .....	96
Calibration and validation dataset.....	97
<b>4.4.3. Model calibration .....</b>	<b>97</b>
Calibration parameters definition.....	97
Objective function definition .....	98
<b>4.4.4. Model validation .....</b>	<b>100</b>
Goodness-of-fit indexes.....	100
Validation results .....	101
<b>4.5. Model Application.....</b>	<b>105</b>
<b>4.6. Final considerations.....</b>	<b>108</b>
<b>4.7. Chapter nomenclature.....</b>	<b>109</b>
<b>5. A new modelling framework for fully mechanically controlled livestock houses .....</b>	<b>113</b>
<b>5.1. A numerical approach for livestock houses .....</b>	<b>115</b>
<b>5.2. Literature review: energy models for livestock houses .....</b>	<b>115</b>
<b>5.2.1. Steady-state energy models.....</b>	<b>117</b>
<b>5.2.2. Dynamic energy models.....</b>	<b>119</b>
<b>5.2.3. Computational Fluid Dynamics (<i>CFD</i>).....</b>	<b>121</b>
<b>5.3. An energy modelling framework for climate-controlled livestock houses</b>	<b>122</b>
<b>5.4. Model customization for broiler houses: development .....</b>	<b>126</b>
<b>5.4.1. The need of a broiler house energy model .....</b>	<b>126</b>
<b>5.4.2. Overview on broiler houses modelling issues.....</b>	<b>126</b>
<b>5.4.3. Calculation modules.....</b>	<b>129</b>
Initialization module .....	129
Broiler modelling module .....	130
Thermal balance module.....	132
Cooling ventilation and evaporative cooling module .....	132
Moisture balance module .....	134
System performance module.....	135
<b>5.5. Model customization for broiler houses: validation.....</b>	<b>136</b>
<b>5.5.1. Case study description .....</b>	<b>137</b>
Broiler house description .....	137

Monitoring campaign description .....	138
5.5.2. Model calibration and validation.....	140
Preliminary assessment of model reliability .....	140
Calibration of the model.....	141
Validation of the model: indoor climate conditions .....	142
Validation of the model: energy consumption .....	145
5.6. Model customization for pig houses: development .....	146
5.6.1. The importance of a pig house model .....	147
5.6.2. Overview on pig houses modelling issues .....	148
Peculiarities of buildings for growing-finishing pigs.....	148
Peculiarities of climate control in growing-finishing pig houses .....	148
5.6.3. Calculation modules .....	150
Initialization module .....	150
Pig modelling module .....	150
Thermal balance module .....	152
Cooling ventilation calculation module .....	152
Moisture balance module .....	152
System performance module.....	153
5.7. Model customization for pig houses: validation.....	154
5.7.1. Case study description.....	154
Pig house description .....	154
Monitoring campaign description .....	155
5.7.2. Model validation .....	155
5.8. Model application .....	158
5.9. Alternative energy simulation methods .....	161
5.9.1. The considered calculation methods .....	162
The quasi-steady-state (QS) method .....	162
The simple hourly (SH) dynamic method .....	163
The detailed dynamic (DD) method.....	163
5.9.2. Consistency options.....	163
5.9.3. Results .....	164
5.10. Final considerations.....	167
5.11. Chapter nomenclature .....	169
<b>6. The role of envelope in livestock houses: a case study on broiler house design .....</b>	<b>173</b>
6.1. The importance of the primary energy approach in the envelope design 175	
6.2. Materials and methods .....	177
6.2.1. Definition of scenarios .....	180
Types of broiler house envelopes.....	180

Outdoor weather conditions .....	182
6.2.2. Financial evaluation: global cost methodology.....	183
6.3. Results and discussion.....	185
6.3.1. Delivered energy approach .....	185
Thermal and electrical energy consumption .....	185
Reference values of delivered energy consumption.....	187
6.3.2. Primary energy approach .....	189
Primary energy consumption .....	189
Reference values of primary energy consumption.....	192
6.3.3. Financial evaluation .....	193
6.3.4. Comparison of indoor climate conditions.....	194
6.4. Final considerations.....	195
6.5. Chapter nomenclature.....	196
<b>7. The role of ventilation in livestock houses: <i>IAQ</i> improvements and energy consumption.....</b>	<b>199</b>
7.1. The detrimental effects of NH <sub>3</sub> and CO <sub>2</sub> on broiler health .....	201
7.2. Materials and methods.....	203
7.2.1. Overview on the experimental and simulation activity.....	203
7.2.2. Case study description .....	203
Housing and reared broilers .....	203
Climate control system .....	204
7.2.3. Monitoring system description.....	205
7.2.4. Calculation process .....	206
Estimation of the increased ventilation flow rate to fulfil the gas concentration requirements .....	206
Estimation of the electrical and thermal energy consumption .....	208
7.3. Results and discussion.....	209
7.3.1. Analysis of the monitored data .....	209
7.3.2. Evaluation of the theoretical ventilation increase .....	213
7.3.3. Evaluation of the energy consumption.....	215
7.4. Final considerations.....	218
7.5. Chapter nomenclature.....	219
<b>8. Conclusions.....</b>	<b>221</b>
8.1. Final remarks .....	223
8.2. Future works .....	224
8.3. Future perspectives .....	224
