

TABLE OF CONTENTS

NOMENCLATURE	29
I. INTRODUCTION	31
Biodegradable Antimicrobial Films for Food Packaging: Effect of Antimicrobials on Degradation	33
1. Introduction	36
2. Antimicrobial packaging materials based on biodegradable polymers	37
2.1. Polymers from biomass	38
2.2. Synthetic Polymers	42
2.3. Polymers from Microorganisms	47
3. Polymer biodegradation studies in different media	52
4. Effect of antimicrobials on the biodegradation of polymer based active packaging materials	62
5. Final remarks	67
6. References	68
II. OBJECTIVES	81
III. CHAPTERS	85
Chapter 1. Thermoprocessed starch-polyester bilayer films as affected by the addition of gellan or xanthan gum	89
1. Introduction	92
2. Materials and methods	94
2.1. Materials	94
2.2. Preparation of films	95
2.3. Film characterisation	96
3. Results and discussion	98
3.1. Properties and microstructure of monolayer films	98

3.2. Properties and microstructure of bilayer films.....	106
4. Conclusions.....	113
5. References.....	114
Chapter 2. Use of phenolic acids to obtain active films based on PLA- PHBV polyesters	119
1. Introduction.....	122
2. Materials and methods	123
2.1. Materials	123
2.2. Preparation of blend films.....	124
2.3. Microstructural and thermal analyses	124
2.4. Tensile properties and thickness.....	125
2.5. Moisture content and barrier properties.....	125
2.6. Optical properties	126
2.7. Retention of active compounds and release kinetics in different food simulants	127
2.8. Antibacterial activity	128
2.9. Statistical analysis.....	129
3. Results and discussion	130
3.1. Microstructure and thermal behavior	130
3.2. Tensile properties and film thickness	135
3.3. Moisture content and barrier properties.....	136
3.4. Optical properties	137
3.5. Retention of active compounds after film processing and release kinetics	138
3.6. Minimum inhibitory concentration (MIC) of phenolic acids and antibacterial performance of the films.	142
4. Conclusions.....	144

5. References	145
Chapter 3. Biodegradation of PLA-PHBV blend films as affected by the incorporation of different phenolic acids	155
1. Introduction	158
2. Materials and methods	159
2.1. Materials	159
2.2. Obtaining active blend films.....	160
2.3. Film characterisation.....	160
2.4. Thermogravimetric analysis	161
2.5. Compost and synthetic solid residue (SSR).....	161
2.6. Disintegration test.....	162
2.7. Biodegradation test.....	163
2.8. Statistical analysis.....	164
3. Results and discussion	164
3.1. Moisture content, thickness and elementary composition	164
3.2. Compost characteristics	166
3.3. Disintegration test.....	167
3.4. Thermogravimetric analysis	169
3.5. Biodegradation kinetics under laboratory-scale composting conditions..	173
4. Conclusions.....	178
5. References	178
Chapter 4. Starch-polyester bilayer films with phenolic acids for meat preservation	187
1. Introduction	190
2. Materials and methods	192
2.2. Preparation of bilayer films.....	193

2.3. Characterisation of tensile and barrier properties of the bilayer films	194
2.4. Application of the bilayer films for pork meat packaging purposes	195
2.5. Statistical analysis.....	197
3. Results and discussion	197
3.1. Tensile and barrier properties of the films	197
3.2. Changes in the quality parameters of packaged pork meat throughout cold storage.....	200
4. Conclusion	208
5. References	209
IV. GENERAL DISCUSSION	217
V. CONCLUSIONS	227
