Thesis summary	8
Resumen de la tesis.....	9
Resum de tesi.....	11
Introduction	13
The burden of oral diseases.....	15
Oral disease susceptibility.....	16
The oral microbiota in health.....	17
Resilience to disease drivers.....	20
‘Regime shifts’ towards oral disease.....	22
Carbohydrate consumption: regime shift to caries vs resilience.....	23
Plaque accumulation: regime shift to periodontal diseases vs resilience.....	26
Mechanisms that prevent dysbiosis.....	31
Prospects: preventive dentistry.....	33
Enhancement of resilience with pre- and probiotics.....	33
Nitrate in edible plants.....	35
The nitrate-nitrite-nitric oxide pathway.....	39
Nitrate and oral health.....	42
Objectives and hypotheses	45
Results of thesis	47
Chapter 1	48
1. Nitrate as a potential prebiotic for the oral microbiome	49
1.1 Abstract	49
1.2 Introduction	50
1.3 Materials and methods	52
1.3.1 Unstimulated saliva sampling.....	52
1.3.2 In vitro oral biofilm growth and impedance-based quantification.....	53
1.3.3 Incubating saliva with nitrate and glucose.....	54
1.3.4 Nitrate, nitrite, ammonium, lactate and pH measurements.....	54
1.3.5 Biofilms protein and DNA quantification.....	55

Index of PhD thesis by Bob T. Rosier entitled:

“Nitrate as a prebiotic and nitrate-reducing bacteria as probiotics for oral health”

1.3.6 Biofilm composition determined by 16 rDNA Sequencing.....	56
1.3.7 Statistical analysis.....	57
1.4 Results.....	57
1.4.1 Effect of nitrate on biofilm growth.....	57
1.4.2 Changes in nitrate, nitrite, ammonium, lactate and pH during biofilm growth.....	59
1.4.3 The effect of different nitrate concentrations on acidification by sugar metabolism.....	62
1.4.4 Nitrate strongly affects biofilm composition.....	63
1.5 Discussion.....	68
1.5.1 Nitrate: from disease-associated to neutral compound with health benefits.....	74
1.6 Conclusions.....	75
1.7 Supplementary figures and tables.....	76
1.8 Data availability.....	80
Chapter 2.....	81
2. Isolation and characterization of nitrate-reducing bacteria as potential probiotics for oral and systemic health.....	82
2.1 Abstract.....	82
2.2 Introduction.....	83
2.3 Materials and methods.....	85
2.3.1 Donor selection and sample procedure.....	85
2.3.2 Isolation of nitrate-reducing bacteria.....	86
2.3.3 Nitrate reduction screenings of bacterial isolates.....	87
2.3.4 Effect of isolates on in vitro biofilms.....	87
2.3.5 DNA isolation for sequencing.....	88
2.3.6 Taxonomic classification of nitrate-reducing isolates.....	88
2.3.7 Genome sequencing.....	88
2.3.8 Genomic analysis.....	89
2.3.9 Determination of bacterial composition of in vitro communities from two donors.....	90
2.3.10 Supernatant analysis: nitrate, nitrite, ammonium, lactate and pH measurements.....	90
2.3.11 Statistical analysis.....	90
2.4 Results.....	91
2.4.1 Isolation of nitrate-reducing bacteria and testing their nitrate-reduction capacity.....	91
2.4.2 Selection of probiotic candidates.....	98
2.4.3 Genome analysis and identification of possible virulence genes.....	98

2.4.4 Isolate-specific effect of pH on nitrate-reduction.....	101
2.4.5 Effect of isolates on in vitro oral community metabolism.....	102
2.5 Discussion	107
2.6 Concluding remarks	114
2.7 Supplementary figures and tables	115
2.8 Data availability	120
Chapter 3	121
3. A single dose of nitrate increases resilience against acidification derived from sugar fermentation by the oral microbiome	122
3.1 Abstract	122
3.2 Introduction	123
3.3 Materials and methods	125
3.3.1 Experimental supplements.....	125
3.3.2 Study population.....	126
3.3.3 Sucrose rinses.....	128
3.3.4 Study designs.....	128
3.3.5 Physiological measurements in saliva.....	129
3.3.6 DNA isolation.....	129
3.3.7 16S rRNA gene Illumina sequencing.....	129
3.3.8 Taxonomic classification using DADA2.....	130
3.3.9 qPCR of <i>Rothia</i>	130
3.3.10 Data analysis.....	131
3.4 Results	131
3.4.1 pH-buffering effect 2 h after nitrate intake compared to placebo.....	131
3.4.2 Immediate pH-buffering effect 1 h after nitrate intake.....	135
3.4.3 pH-buffering effect 4 h after nitrate intake compared to water intake.....	136
3.5 Discussion	142
3.6 Concluding remarks	148
3.7 Supplementary figures and table	149
3.8 Data availability statement	153
General discussion of thesis	154
Nitrate as a prebiotic for oral health.....	159
Nitrate safety and risks.....	165
New potential applications of nitrate and nitrate-reducing probiotics to stimulate oral health.....	171
Future prospects.....	177

Conclusions of thesis	180
References	183
Supplementary table of thesis	205
Conflict of interest	206
