1	Introduction	3
1.1	Background	3
1.2	Motivation	4
1.3	Objectives	5
1.4	Method employed	6
2	Literature Review	9
2.1	Available thermomechanical technologies to produce refrigeration by harvesting low-grade thermal energy	9
2.1.1	Jet-ejector refrigeration systems	9
2.1.2	Rankine-based and Stirling-based thermomechanical refrigeration systems	11
2.1.3	Sorption refrigeration	11
2.2	Fundamentals of jet-ejector refrigeration systems	14
2.2.1	Overall system operating principle	14
2.2.2	Jet-ejector operating principle	15
2.2.3	Definition of performance indicators	21
2.2.4	Review of the baseline configuration of jet-ejector refrigeration systems	25
2.2.5	Review of advanced strategies to enhance the performance of the baseline configuration	29
2.3	Applicability of thermally activated refrigeration technologies to produce solar air-conditioning	35
2.3.1	Air-conditioning market and penetration of solar-driven refrigeration technologies	35
2.3.2	Initiatives to promote the use of solar refrigeration systems	37
2.3.3	Potential advantages of solar-driven refrigeration systems	38
2.3.4	Solar collector available technologies	39
2.3.5	Thermal storage system available technologies	40
2.4	Applicability of thermally activated refrigeration technologies to produce refrigeration in ICES	42
2.5	Innovation of the present research	46
2.6	Summary	46
3	Description of the computational models	49

3.1	Introduction	49
3.2	Solar thermal collector	53
3.2.1	Description of the steady model	53
3.2.2	Description of the transient nodal model	53
3.3	Thermal Storage System	64
3.3.1	Description of constructive characteristics	67
3.3.2	Description of the transient nodal model	68
3.4	Jet-ejector refrigeration system	73
3.4.1	Working fluid selection	73
3.4.2	Generator	73
3.4.3	Condenser	75
3.4.4	Evaporator	76
3.4.5	Pressure pump and expansion valve	77
3.5	Jet-ejector	79
3.5.1	Geometry description	79
3.5.2	Computational model to determine the primary nozzle mass flow rate (\dot{m}_{pf})	83
3.5.3	CFD model to determine the entrainment ratio (ω) implemented in a commercial code	84
3.5.4	Experimental validation of the CFD setup	91
3.5.5	CFD model to determine the entrainment ratio (ω) implemented in OpenFoam	92
3.6	Heat exchange correlations	94
3.6.1	Justification	94
3.6.2	Definition of mathematical expressions	95
3.7	Monetary cost correlations	97
3.7.1	Jet-ejector refrigeration system	97
3.7.2	Solar collector	98
3.7.3	Thermal storage system	99
3.7.4	Vapor-compression refrigeration system	99
3.8	Integration of the numerical models for the steady-state approach	99
3.9	Integration of the numerical models for the transient approach	101
3.10	Summary	102

I Steady-state evaluation of the refrigeration system 105

4 Steady-state characterization of the fixed-geometry jet-ejector (FJE) 107

4.1	Introduction	107
4.2	Working fluid selection and optimum design for the FJE	107
4.2.1	Definition of the study	107
4.2.2	Results	109
4.3	Evaluation of the FJE response in off-design ambient conditions and off-design thermal source conditions	114
4.3.1	Definition of the study	114
4.3.2	Results	115

4.4	Summary	118
5	Steady-state characterization of the adjustable jet-ejector (AJE)	121
5.1	Introduction	121
5.2	Working fluid selection and optimum design for the AJE	121
5.2.1	Definition of the study	121
5.2.2	Results	122
5.3	Evaluation of the AJE in off-design ambient conditions and variable conditions in the hot thermal source	124
5.3.1	Definition of the study	124
5.3.2	Results	124
5.4	Summary	130
6	Steady-state performance characterization of the ARS and the FRS for a solar application	133
6.1	Introduction	133
6.2	Definition of the climatic conditions	133
6.3	Definition of the study	136
6.3.1	Hypothesis, constraints, and resolution strategy	136
6.4	Refrigeration system characterization in design conditions	137
6.4.1	Influence of different working fluids	137
6.4.2	Influence of different solar collector technologies and solar irradiance scenarios	140
6.5	Definition of an adequate jet-ejector scale	141
6.6	Refrigeration system characterization in off-design conditions: ARS versus FRS	143
6.6.1	Off-design ambient temperature	143
6.6.2	Off-design conditions in the hot driving source	143
6.7	Summary	146
7	Steady-state performance characterization of the FRS for an automotive application	149
7.1	Introduction	149
7.2	Definition of the study	150
7.2.1	Definition of boundary conditions	150
7.2.2	Design analysis	150
7.2.3	Off-design analysis	151
7.3	Results	153
7.3.1	Design analysis	153
7.3.2	Off-design analysis	154
7.3.3	Impact over engine efficiency and discussion of architectures	154
7.4	Summary	157

II	Dynamic response of the refrigeration system	159
8	Dynamic response of the FRS and the ARS architectures in a solar refrigeration application	161
8.1	Introduction	161
8.2	Definition of the study	162
8.2.1	Hypothesis and constraints	162
8.2.2	Resolution strategy and post-processing	163
8.3	Results comparing the FRS and ARS architectures	163
8.3.1	Instantaneous evolution of the performance indicators	163
8.3.2	Time-averaged performance indicators	167
8.4	Summary	170
9	Influence of the thermal storage system sizing on the ARS in a solar refrigeration application	175
9.1	Introduction	175
9.1.1	Hypothesis, constraints, definition of performance indicators and design variables	175
9.1.2	Definition of the study and resolution strategy	176
9.2	Results	177
9.2.1	Sensitivity analysis of the system sizing: Short-term insights	177
9.2.2	Sensitivity analysis of the system sizing: Mid-term insights	182
9.3	Summary	185
10	Thermoeconomic analysis	189
10.1	Introduction	189
10.2	Definition of the study: Comparison between a VCRS+ARS and a single VCRS	190
10.2.1	Hypothesis and constraints	192
10.3	Results	192
10.3.1	Dynamic response of the combined system (ARS+VCRS)	192
10.3.2	OPEX and CAPEX quantification	197
10.4	Measures to achieve a financially sustainable refrigeration system	201
10.5	Summary	202
11	Conclusions and future works	205
11.1	Introduction	205
11.2	Main contributions	205
11.2.1	Jet-ejector modeling and characterization	205
11.2.2	Overall system modeling	206
11.2.3	Thermoeconomic analysis	208
11.3	Future works	208
11.3.1	Theoretical future works	208
11.3.2	Experimental future works	209
