

TABLE OF CONTENTS

Chapter 1	1
Introduction	1
Objectives	5
Chapter 2	7
Finite beam element used	7
Chapter 3	8
Methodology to analyze steel frames subjected to non-uniform temperatures by fire using beam-type elements	8
3.1 Justification and antecedents	8
3.2 Cardington fire test	10
3.3 Numerical modeling	11
3.4 Methodology description	11
3.5 Heat transfer analysis of the framework sections	14
3.6. Structural analysis of the framework	18
3.7. Thermal results of sections	23
3.8 Framework’s mechanical results	31
Chapter 4	41
New proposals for modeling lateral-torsional buckling in class-4 steel members at elevated temperatures using beam-type elements	41
4.1 Justification and antecedents	41
4.2 Description of the FIDESC4 tests used for validation	45
4.3 Proposed modeling strategies	48
4.4 LTB-GMNIA of the tested beams	49
4.4.1 Finite element model definition	50
4.4.2 Eigenvalue analysis	50
4.4.3 Implementation of initial imperfections	51
4.4.4 Implementation of residual stresses	53
4.4.5 Application of the thermal conditioning	54
4.4.6 Application of post-conditioning	55
4.4.7 Results	56
4.5 Implementation of LTB-GMNIA in the proposed modeling strategies	56
4.5.1 Fiber Beam Model (FBM)	57
4.5.2 Cruciform Frame Model (CFM)	62
4.5.3 Shell Models for numerical validation	67
4.6 Validation of the proposed strategies	70
4.6.1 Test-1 validation	70
4.6.2 Test-3 validation	77
Chapter 5	82
Discussion of results	82
Chapter 6	84
Conclusions and future work	84
6.1 Conclusions	84
6.2 Future work	86
References	88

Fig. 54 CFM meshing and boundary conditions for Test-1. (a) Non-extruded view. (b) Extruded view	63
Fig. 55 Details of the CFM web fibers and dimensions of the fiber elements for Test-1, in mm. (a) Vertical fiber. (b) Horizontal fiber.....	63
Fig. 56 CFM cross-section discretization and element cells for Test-1.....	64
Fig. 57 CFM global mode shape for Test-1. (a) Non-extruded view. (b) Extruded view	65
Fig. 58 CFM local mode shape for Test-1. (a) Non-extruded view. (b) Extruded view	65
Fig. 59 Imperfect initial geometry of CFM for Test-1 (mm)	66
Fig. 60 CFM tensile and compressive residual stresses in the I-section for Test-1 [MPa]	66
Fig. 61 CFM stiffener detail for Test-1.....	67
Fig. 62 Full LTB-GMNIA flowchart. (a) FBM. (b) CFM.....	68
Fig. 63 Ansys-SM for Test-1. (a) Geometrical model: division into areas. (b) Meshing and boundary conditions	68
Fig. 64 Ansys-SM for Test-1. (a) Global mode shape. (b) Local mode shape.....	69
Fig. 65 (a) Imperfections added to y -coordinates of the web for Test-1 (mm). (b) Imperfections added to x -coordinates of the top flange for Test-1(mm).....	70
Fig. 66 Total applied load versus vertical deflection at the bottom flange mid-point in the beam mid-span for Test-1	71
Fig. 67 Deformed shapes of Test-1 models. (a) FBM U_z deflection. (b) CFM U_z deflection. (c) Ansys-SM U_z deflection (d) FIDESC4 Test-1. (e) FIDESC4 Safir-SM. (f) FIDESC4 Abaqus-SM.....	74
Fig. 68 Top flange and web local buckling detail. (a) CFM. (b) Ansys-SM.....	74
Fig. 69 Axial stresses at the end of the analysis [MPa]. (a,d) FBM. (b,e) CFM. (c,f) Ansys-SM	75
Fig. 70 Warping on the deformed shape.....	76
Fig. 71 Bicurvature	76
Fig. 72 Bimoment.....	76
Fig. 73 Bimoment-bicurvature relationship.....	76

Fig. 74 Total applied load versus vertical deflection at the bottom flange mid-point in the beam mid-span for Test-3	77
Fig. 75 Deformed shape of Test-3 models. (a) FBM Uz deflection. (b) CFM Uz deflection. (c) Ansys-SM Uz deflection (d) FIDESC4 Test-3. (e) FIDESC4 Safir-SM. (f) FIDESC4 Abaqus-SM.....	79
Fig. 76 Top flange and web local buckling detail. (a) CFM. (b) Ansys-SM.....	80
Fig. 77 Comparison of the CPU times of the proposed modeling strategies. (a) Test-1. (b) Test-3	81

LIST OF TABLES

Table 1. Temperature variation factors along the beam.....	20
Table 2. Time of fire resistance (R_f)	34
Table 3. Calculation time for Ansys models.....	34
Table 4. Steel properties at room temperature	47
Table 5. Amplitudes of local and global imperfections, in mm	47
Table 6. Comparison of results between FIDESC4 simulations, experimental test, and proposed modeling strategies with and without residual stresses and thermal strains for Test-1	72
Table 7. Overestimation of the predictions of the proposed models without residual stresses and thermal strains for Test-1.....	72
Table 8. Relationship between the ultimate moment in the heated part of the beam and elastic bending moment for Test-1	73
Table 9. Comparison of results between FIDESC4 simulations, experimental test, and proposed modeling strategies with and without residual stresses and thermal strains for Test-3.....	78
Table 10. Overestimation of the predictions of the proposed models without residual stresses and thermal strains for Test-3.....	78
Table 11. Relationship between the ultimate moment in the heated part of the beam and elastic bending moment for Test-3	78
