Modelling of a System for the Detection of Weak Signals through Text Mining and NLP. Proposal of Improvement by a Quantum Variational Circuit.

Modelización de un sistema para la detección de señales débiles mediante minería de texto y NLP. Propuesta de mejora mediante circuito variacional cuántico.

Abstract 9

Resumen 10

Resum 11

1. Introduction 13

1.1 State of the Art: Context of the fundamental research 14

1.2 Objectives and tasks 17

1.3 Main contributions and benefits 18

1.4 Structure of this document 19

References 20

List of publications 23

2. Improving strategic decision making by the detection of weak signals in heterogeneous documents by text mining techniques. 29

2.1. Introduction 29

2.2. State of the art 31

2.3. System implementation for weak signaldetection 33

2.3.1. System definition and propositions 33

2.3.2. Description of the methodology applied 34

2.3.3. Phase 1: Collection and integration ofinformation 35

2.3.4. Phase 2: Extract, transform and load 36

2.3.5. Phase 3: Selection, processing andtransformation 37

2.3.6. Phase 4: Text mining focused on weak signaldetection 37

2.3.7. Phase 5: Natural language processing 40

2.3.8. Phase 6: Interpretation and evaluation 41

2.4. Results of the experiment applied to the futureof artificial intelligence 41

2.4.1. Keyword issue map 41

2.4.2. Keyword emergence map 42

2.4.3. Detected candidate for weak signal terms 44

2.4.4. Multi-word analysis 45

2.5. Evaluation of the results 45

2.6. Conclusions and future work 47
Acknowledgements 47

3. Detecting Weak Signals of the Future: A System Implementation Based on Text Mining and Natural Language Processing 53
3.1. Introduction 53
3.1.1. Weak Signals 54
3.1.2. Background and Related Work 55
3.2. Description of the Proposed System 56
3.2.1. Stage 1: Definition of the Input Data Sources 57
3.2.2. Stage 2: Creation of an Input Dataset 58
3.2.3. Stage 3: Extract, Transform and Load (ETL) 59
3.2.4. Stage 4: Category Assignation 59
3.2.5. Stage 5: Text Mining 60
3.2.6. Stage 6: Natural Language Processing (NLP): Multi-Word Expressions 63
3.2.7. Stage 7: Interpretation, Evaluation and Decision-Making 63
3.3. Experimental Setup 63
3.3.1. Definition of the Experiment for Remote Sensing Sector 63
3.3.2. Definition of the Evaluation Methods 65
3.4. Results 65
3.4.1. Keyword Issue Map (KIM) for Remote Sensing 65
3.4.2. Keyword Emergence Map (KEM) for Remote Sensing 66
3.4.3. Detected Terms as Potential Weak Signals 67
3.4.4. Results of the Multi-Word Analysis 69
3.4.5. Evaluation of the Results 69
3.5. Discussion 70
3.5.1. Main Findings 70
3.5.2. Limitations 71
3.6. Conclusions 72
Appendix A 73
