GENERAL DISCUSSION.....	127
GENERAL REFERENCES.....	141
CONCLUSIONS.....	155

List of figures

General Introduction

Fig 1. Double-strand break (DSB) repair mechanisms	13
Fig 2. Site-specific nucleases (SSNs) used in genome editing	15
Fig 3. Schematic overview of the main class 2 CRISPR-Cas systems for genome editing.....	18
Fig 4. Delivery strategies of CRISPR-Cas components to plants.....	23
Fig 5. Tissue culture-free strategies for plant genome editing	33

Chapter I

Fig 1. PVX vector to express sgRNAs for CRISPR-Cas9-based gene editing in <i>N. benthamiana</i>	48
Fig 2. Single gene editing, with or without flanking tRNAs, using the PVX-based system	50
Fig 3. Single versus multiplex gene editing using the PVX-based system	53
Fig 4. Gene editing in <i>N. benthamiana</i> plants regenerated from infected tissue	55
Fig 5. Heritable gene editing using the PVX-based system	56
Fig 6. Heritable gene editing with a PVX vector expressing mobile sgRNAs	57
Fig S1. Full sequence of wild-type PVX and its derived recombinant viruses	70
Fig S2. Sequence of the human codon-optimized SpCas9 transgene inserted into <i>N. benthamiana</i>	74
Fig S3. Sequencing chromatogram of a biallelic edited plant (for PVX::sgXT2B-tFT)	76
Fig S4. Sequencing chromatogram of a biallelic edited plant (for PVX::sgPDS3ii-tFT)	77

Chapter II

Fig 1. DNA-free gene editing in <i>N. benthamiana</i> based on virally delivered LbCas12a and crRNA.....	94
Fig 2. 35S::NIb <i>N. benthamiana</i> plants and representative leaves at 14 dpi	95
Fig 3. Engineering of a single PVX vector for complementation of defective TEVΔNIb and expression of LbCas12a crRNA	98
Fig 4. Representative leaves from wild-type <i>N. benthamiana</i> plants at 14 dpi	90
Fig S1. Full sequence of the wild-type TEV, TEVΔNIb and derived recombinant viruses	108
Fig S2. Full sequence of wild-type PVX and its derived recombinant viruses	114
Fig S3. RT-PCR analysis of TEVΔNIb progeny in 35S::NIb and wild-type <i>N. benthamiana</i>	117
Fig S4. ICE analysis results of target site mutations in 35S::NIb <i>N. benthamiana</i> co-inoculated with recombinant viruses derived from TEVΔNIb or PVX	118
Fig S5. Analysis of potential NIb acquisition by TEVΔNIb	119

General Discussion

Fig 1. Development of CRISPR-Cas mediated virus resistance in plants.....	135
Fig 2. Factors affecting chromatin state and their influence on CRISPR-Cas functioning	137

List of tables

General Introduction

Tbl 1. Plant virus vectors developed for the delivery of CRISPR-Cas components in VIGE strategies.....	26
---	----

Chapter I

Tbl S1. <i>N. benthamiana</i> genes targeted by the PVX-based CRISPR-Cas9 system	78
Tbl S2. Primers used for the construction of recombinant viruses derived from PVX	79
Tbl S3. Primer combinations used for the construction of recombinant viruses derived from PVX.....	81
Tbl S4. Primers used for PVX diagnosis by RT-PCR	82
Tbl S5. Primers used for Cas9-sgRNA gene editing analysis.....	83

Chapter II

Tbl S1. <i>N. benthamiana</i> genes targeted by the CRISPR-Cas12a system.....	120
Tbl S2. Primers used for the construction of recombinant viruses derived from TEVΔNIb or PVX	121
Tbl S3. Primer combinations used for the construction of recombinant viruses derived from TEVΔNIb or PVX	122
Tbl S4. Primers used for TEVΔNIb diagnosis by RT-PCR	123
Tbl S5. Primers used for Cas12a-crRNA gene editing analysis.....	124
