Abstract ix

Contents xv

Acronyms xxi

1 Introduction 1

1.1 Justification 1
1.2 Thesis outline 3
1.3 Contributions 5
1.4 Publications 6
1.5 GitHub repository 7

2 Host-aware model 9

2.1 Abstract 9
2.2 Introduction 10
2.3 Results 12
2.3.1 Burden-aware model of gene expression dynamics. 12

2.3.2 Ribosomal and non-ribosomal genes differ in their average resources recruitment strength . . . 20
2.3.3 The resources recruitment strength explains the distribution of ribosomal and non-ribosomal protein mass fractions . . . 22
2.3.4 Host-circuit interaction shapes the optimal synthesis rate of exogenous proteins . . . 26
2.3.5 The substrate level emphasizes the differential role of RBS and promoter strengths. . . . 30
2.4 Discussion . . . 33
2.5 Conclusions . . . 36

3 *OneModel*: a SBML modeling tool 39

3.1 Abstract . . . 39
3.2 Introduction . . . 40
3.3 *OneModel* workflow . . . 41
3.4 *OneModel* design philosophy . . . 42
3.5 *OneModel* implementation . . . 44
3.6 Subpackage *SBML2dae* . . . 45
3.7 *OneModel* installation . . . 47
3.8 Examples . . . 48
3.8.1 Constitutive protein expression . . . 48
3.8.2 Induced protein expression . . . 53
3.8.3 Antithetic controller . . . 55
3.8.4 Host-aware antithetic controller . . . 58
3.9 *OneModel* syntax . . . 63
3.9.1 Comments . . . 64
3.9.2 Parameters . . . 65
3.9.3 Species . . . 66
3.9.4 Reactions . . . 66
3.9.5 Substitution, rate, and algebraic rules . . . 67
3.9.6 Model and objects . . . 69
3.9.7 Input . . . 70
3.9.8 Import . . . 71
3.9.9 Standalone. . . . 72
3.10 Discussion and conclusions . . . 72

4 Multi-scale model 75

4.1 Abstract . . . 76
4.2 Introduction . . . 76
4.3 Methods . . . 78
4.3.1 Multi-scale model . . . 78
4.3.2 Bioreactor model—modes of operation . . . 86
4.3.3 TRY performance indices . . . 88
4.3.4 TRY relative variation indices for substrate variations . . . 89
4.4 Results . . . 89
4.4.1 Nominal TRY as a function of the expression space and bioreactor operation . . . 89
4.4.2 Mapping between gene expression and TRY spaces . . . 92
4.4.3 TRY relative variation indices are fundamentally different at low and high cell burden . . . 94
4.4.4 There exists a trade-off in the relative variation indexes . . . 95
4.5 Discussion and conclusions . . . 97

5 Host-aware analysis of the antithetic controller 99

5.1 Abstract . . . 100
5.2 Introduction . . . 100
5.2.1 Ideal antithetic controller . . . 101
5.3 Methods . . . 103
5.3.1 Model equations . . . 103
5.3.2 Antithetic controller reference . . . 105
5.3.3 States and parameters . . . 106
5.3.4 Model implementation and simulation . . . 107
5.4 Results . . . 109
5.4.1 The antithetic controller improves robustness . . . 109
5.4.2 Increased gain leads to burden . . . 111
5.4.3 Reducing dilution reduces gain . . . 113
5.4.4 RBS effect on the reference . . . 114
5.5 Discussion and conclusions . . . 117

6 Control of turbidostats 119

6.1 Abstract . . . 119

6.2 Introduction 120
6.3 Problem statement 122
6.4 Proposed control law. 123
6.4.1 Growth rate proportional feeding law 123
6.4.2 Time scaling. 124
6.4.3 Adaptive shaping of γ 124
6.4.4 Stability in the original time scale 126
6.5 Controller tuning 128
6.5.1 Closed loop poles in the $\tau-$time scale 128
6.5.2 Effects of the growth rate observer 129
6.5.3 Design of $f(\gamma)$ 130
6.6 Simulated results 130
6.6.1 Set-point change 131
6.6.2 Start-up 132
6.6.3 Comparison with other controllers 137
6.7 Experimental results 138
6.8 Discussion and conclusions. 141

7 General conclusions 143

Bibliography 149

Appendices 167

A Derivation of the host-aware model 167

A.1 Modeling gene expression 167
A.2 Dynamics of the number of mature available ribosomes 178
A.3 Relating free and available ribosomes 180
A.4 Fractions of bound and actively translating ribosomes with respect to the available mature ones 182
A.5 Obtaining the cell specific growth rate 184
A.6 Cell specific growth rate and population dynamics 186
A.7 Relationship between growth rate and cell mass 190

A.8 Average host dynamics and steady state balanced growth. 193
A.9 Synthesis rate of exogenous proteins and interaction with the host cell 196
A.10 Model parameters 199
A.11 Estimation of the fractions Φ_t^h and Φ_b^h 199
A.12 Evaluation of the maximum resources recruitment strength. 202
A.13 Estimation of the number of free ribosomes in the cell 204
A.14 Estimation of the parameters for ribosomal and non-ribosomal endogenous proteins 209
A.15 Estimated fractions of ribosomes 210
A.16 Effect of substrate availability of growth rate and specific synthesis rate 211
A.17 Software code and data 211
