<b>List of Figures</b>	<b>vii</b>
<b>List of Tables</b>	<b>xviii</b>
<b>Nomenclature</b>	<b>xxiii</b>
<b>1 Introduction</b>	<b>1</b>
1.1 General Context . . . . .	1
1.2 Objectives and Methodology . . . . .	7
1.3 Thesis Outline . . . . .	9
References . . . . .	11
<b>2 Fundamentals of the ICE and Fuel Delivery</b>	<b>17</b>
2.1 Introduction . . . . .	17
2.2 Description and Classification of ICEs . . . . .	19
2.3 Fuel Injection Systems . . . . .	22
2.3.1 Diesel engines . . . . .	22
2.3.2 Gasoline engines . . . . .	24
2.4 Gasoline Direct Injection . . . . .	29
2.4.1 Introduction . . . . .	29
2.4.2 Overview of direct injection gasoline engines . . . . .	30
2.4.3 Operating strategies in GDI engines . . . . .	32
2.4.4 Advances in GDI engine technology . . . . .	37
References . . . . .	40

<b>3 Fuel Injectors in GDI Engines</b>	<b>45</b>
3.1 Introduction . . . . .	45
3.2 Common-rail Gasoline Injection System . . . . .	46
3.3 Evolution and Types of GDI Injectors . . . . .	47
3.4 Internal Nozzle Flow . . . . .	53
3.4.1 Forced internal flow . . . . .	53
3.4.2 Geometry of the injector nozzle . . . . .	56
3.4.3 Hydraulic characterization of the nozzle . . . . .	61
3.4.4 Cavitation phenomenon . . . . .	67
3.4.5 Flash boiling phenomenon . . . . .	70
3.5 GDI Spray Formation . . . . .	77
3.5.1 Atomization process . . . . .	79
3.5.2 Evaporation process . . . . .	89
3.5.3 Spray characterization . . . . .	91
3.5.4 Spray collapse . . . . .	97
References . . . . .	100
<b>4 State of the Art</b>	<b>113</b>
4.1 Introduction . . . . .	113
4.2 Experimental Background on GDI Studies . . . . .	114
4.2.1 Internal and near nozzle flow . . . . .	114
4.2.1.1 Injector characterization . . . . .	114
4.2.1.2 Injection process phenomena . . . . .	117
4.2.2 External flow . . . . .	120
4.2.2.1 Spray pattern characterization . . . . .	120
4.2.2.2 Spray pattern influence on engine performance	124
4.3 Numerical Background on GDI Studies . . . . .	128
4.3.1 Internal and near nozzle flow . . . . .	130
4.3.1.1 Multi-fluid Eulerian models . . . . .	130
4.3.1.2 Homogeneous Eulerian models . . . . .	132
4.3.1.3 Interface tracking and capturing models . . . . .	135
4.3.2 External flow . . . . .	148
4.3.2.1 Introduction and basic descriptions . . . . .	148
4.3.2.2 External flow analysis in gasoline nozzle flow applications . . . . .	153
4.3.2.3 Coupling strategy in gasoline nozzle flow applications . . . . .	157
4.4 Summary and Conclusions . . . . .	160
References . . . . .	162

<b>5 Computational Methodology</b>	<b>177</b>
5.1 Introduction . . . . .	177
5.2 Computational Fluid Dynamics Modeling . . . . .	179
5.2.1 Navier-Stokes equations . . . . .	180
5.2.2 Turbulence modeling . . . . .	181
5.2.2.1 Reynolds-Averaged Navier-Stokes (RANS) . .	184
5.2.2.2 Large Eddy Simulations (LES) . . . . .	192
5.2.3 Internal nozzle flow . . . . .	196
5.2.3.1 Volume-of-Fluid (VOF) . . . . .	196
5.2.3.2 Homogeneous Relaxation Model (HRM) . . .	198
5.2.4 Spray modeling . . . . .	201
5.2.4.1 Discrete Phase Modeling (DPM) . . . . .	201
5.2.4.2 Drop drag and liquid/gas coupling . . . . .	202
5.2.4.3 Atomization and drop breakup modeling . .	203
5.2.4.4 Drop turbulent dispersion modeling . . . . .	213
5.2.4.5 Drop collision and coalescence modeling . .	215
5.2.4.6 Drop evaporation modeling . . . . .	217
5.2.4.7 Configuration of the spray model . . . . .	218
5.2.5 VOF-spray one-way coupling. Mapping . . . . .	218
5.2.6 Numerical methods . . . . .	221
5.2.6.1 Rhee-Chow algorithm . . . . .	226
5.2.6.2 Iterative linear solvers . . . . .	226
5.2.6.3 Courant-Friedrichs-Lowy (CFL) numbers . .	227
5.2.6.4 Configuration of the solver . . . . .	227
5.3 Pre-processing . . . . .	229
5.3.1 Geometry . . . . .	229
5.3.1.1 ECN Spray G injector . . . . .	229
5.3.1.2 Production Injector Unit (PIU) injector . .	230
5.3.2 Operating conditions . . . . .	231
5.3.2.1 Spray G injector . . . . .	232
5.3.2.2 PIU injector . . . . .	233
5.3.3 Fuel properties . . . . .	233
5.3.3.1 CONVERGE™ cases . . . . .	235
5.3.3.2 StarCCM+ cases . . . . .	236
5.3.4 Computational domain. Boundary and Initial conditions	237
5.3.4.1 CONVERGE™ domain. Boundary and Initial conditions . . . . .	237
5.3.4.2 StarCCM+ domain. Boundary and Initial conditions . . . . .	246
5.3.5 Computational grid . . . . .	252

5.3.5.1	CONVERGE™ mesh strategy . . . . .	253
5.3.5.2	StarCCM+ mesh strategy . . . . .	258
5.3.6	Summary of numerical algorithms and discretisation schemes . . . . .	264
5.3.6.1	Numerical setup in CONVERGE™ . . . . .	265
5.3.6.2	Numerical setup in StarCCM+ . . . . .	267
5.4	Post-processing . . . . .	268
5.4.1	Internal nozzle flow . . . . .	268
5.4.1.1	ROI and ROM calculation . . . . .	268
5.4.1.2	Spray angle and plume direction calculation .	270
5.4.2	External flow. Macroscopic parameters . . . . .	270
5.4.2.1	Liquid and vapor penetration calculation . .	270
5.4.2.2	Spray angle calculation . . . . .	272
	References . . . . .	274
<b>6</b>	<b>Internal and Near Nozzle Flow Characterization</b>	<b>281</b>
6.1	Introduction to the Steady State Analysis . . . . .	281
6.2	Spray G Injector. CONVERGE™ software. Steady State Analysis . . . . .	282
6.2.1	Determination of the steady state condition . . . . .	282
6.2.2	Mesh sensitivity and validation . . . . .	283
6.2.3	Comparison between submerged and non-submerged conditions . . . . .	285
6.2.4	Discharge volume sensitivity . . . . .	287
6.2.5	RANS turbulence model selection . . . . .	291
6.2.6	Influence of the phase change model parameters . . . .	293
6.3	Spray G Injector. StarCCM+ software. Steady State Analysis	297
6.3.1	Mesh sensitivity and validation . . . . .	297
6.3.1.1	Hexahedral mesh . . . . .	297
6.3.1.2	Polyhedral mesh . . . . .	299
6.4	Spray G Injector. Steady State Validation . . . . .	301
6.4.1	Results and discussion . . . . .	301
6.5	PIU Injector. Steady State Analysis and Validation . . . . .	310
6.5.1	Mesh strategy and validation . . . . .	311
6.5.2	Scalability study . . . . .	313
6.5.3	Symmetry simulation assessment . . . . .	314
6.5.4	Needle lift dependence . . . . .	319
6.5.5	Steady state results for PIU injector . . . . .	320
6.6	Spray G Injector. Transient State Analysis and Validation . . . . .	325
6.6.1	Transient analysis under different software . . . . .	326

---

6.6.2	Influence of different surrogate fuels on the transient injection performance . . . . .	331
6.6.2.1	Iso-Octane validation and discussion . . . . .	332
6.6.2.2	Iso-Octane and E00 comparison . . . . .	339
6.6.2.3	Surrogate fuels comparison . . . . .	343
6.6.3	Influence of the geometry on the transient injection performance . . . . .	349
6.6.3.1	Phase change model parameters influence under generation 3 geometry . . . . .	353
6.6.4	Multiple Injections Analysis . . . . .	357
6.6.4.1	Specific methodology for multiple injection strategy . . . . .	359
6.6.4.2	Multiple injection model validation . . . . .	361
6.6.4.3	Pilot injections analysis . . . . .	366
6.6.4.4	Post injections analysis . . . . .	369
6.6.5	High fidelity simulations. LES approach . . . . .	371
6.6.5.1	LES quality assessment . . . . .	373
6.6.5.2	LES sub-grid model comparison . . . . .	375
6.6.5.3	Transient nozzle flow analysis using LES . . . . .	379
6.7	PIU Injector. Transient State Analysis and Validation . . . . .	392
6.7.1	Nozzle analysis and comparison . . . . .	392
6.7.2	Simulation strategy . . . . .	395
6.7.3	Results and validation . . . . .	400
6.7.3.1	Validation . . . . .	400
6.7.3.2	Parametric variation: effect of injection pressure (PIU) . . . . .	405
6.8	Summary and Conclusions . . . . .	408
6.8.1	Spray G injector steady state conclusions . . . . .	408
6.8.2	PIU injector steady state conclusions . . . . .	409
6.8.3	Spray G injector transient state conclusions . . . . .	411
6.8.3.1	Transient analysis conclusions . . . . .	411
6.8.3.2	Surrogate fuels conclusions . . . . .	412
6.8.3.3	Geometry influence conclusions . . . . .	413
6.8.3.4	Multiple injections conclusions . . . . .	415
6.8.3.5	LES approach conclusions . . . . .	416
6.8.4	PIU injector transient state conclusions . . . . .	417
	References . . . . .	419
<b>7</b>	<b>External Flow Analysis</b>	<b>425</b>
7.1	Introduction . . . . .	425

7.2	Sensitivity Analyses . . . . .	426
7.2.1	Domain independence . . . . .	426
7.2.2	Mesh independence . . . . .	427
7.2.3	Break-up model and turbulence influence . . . . .	429
7.2.4	Mesh orientation influence . . . . .	430
7.3	Spray G Condition. Validation and Discussion . . . . .	431
7.4	Influence of the Operating Condition on the Spray Patterns . .	434
7.5	Spray Patterns through Large Eddy Simulations . . . . .	437
7.6	Summary and Conclusions . . . . .	440
	References . . . . .	442
