

Programa de Doctorado en Ingeniería y Producción Industrial

Departamento de Ingeniería Química y Nuclear

Caracterización de microplásticos en aguas naturales y residuales, y su influencia y separación en procesos biológicos de depuración

Clara Bretas Alvim

Índice

Capítulo I: Objetivos	29
Capítulo II: Wastewater treatment plant as microplastics release source – quantification and identification techniques	31
Capítulo III: Separation and identification of microplastics from primary and secondary effluents and activated sludge from wastewater treatment plants	73
Capítulo IV: Effect of polyethylene microplastics on activated sludge process - accumulation in the sludge and influence on the process and on biomass characteristics	110
Capítulo V: Do polystyrene nanoplastics affect the activated sludge process? A laboratory study with a sequencing batch reactor.....	150
Capítulo VI: An innovative approach to the application of ultrasounds to remove polyethylene microspheres from activated sludge	176
Capítulo VII: Methodology for removing microplastics and other anthropogenic microparticles from sludge dehydrating system	205
Capítulo VIII: Identification of microfibers in drinking water with Nile Red. Limitations and strengths.....	241
Capítulo IX: Conclusiones	272
