Abstract	iii
Preface	xi
Contents	xv
List of Figures	xix
List of Tables	xxiii
Acronyms	xxv
Nomenclature	xxvii
Glossary	xxxiii
1 Introduction	1
1.1 Motivation	1
1.2 Background	4
1.3 Research problem, objectives, and limitations	6
1.4 Structural outline	9
2 State-of-the-art review of DH transition methodologies	11
2.1 Requirements for the transition in DHSs	12
2.2 Method of the state-of-the-art review	16
2.3 Evaluation of the coverage of DH scopes	19
2.4 Discussion of the state-of-the-art review	27

2.5	Conclusion of the state-of-the-art review	28
3	Framework approach	31
3.1	Introducing a new structure for DH scopes	32
3.2	Approach for the framework development	45
3.3	Global conditions for implementation and application	51
3.4	Case study DHS in Hamburg-Wilhelmsburg	53
3.5	Conclusion on the framework approach	55
4	Development of a comprehensive framework	57
4.1	Methods to develop a comprehensive framework	58
4.2	Basic framework structure and outer conditions	62
4.3	Framework process for the design scope	76
4.4	Framework processes for the operative planning scope	91
4.5	Framework process for operation scope	106
4.6	Connection to the evaluation scope	113
4.7	A coherent and comprehensive framework proposal	114
4.8	Validation and discussion of the framework	118
4.9	Conclusion of the framework development	129
5	Heating plant integration into the new framework	131
5.1	State-of-the-art evaluations	133
5.2	A novel method to evaluate the temperature impact on the average variable costs of heating plants	136
5.3	Case studies and specific implementation	142
5.4	Results of the heating plant evaluation	159
5.5	Comparison of heating plants	169
5.6	Conclusion of the heating plant integration	178
6	Improving DHS management by integrating flexibility	181
6.1	Method for the integration of flexibility into the framework	182
6.2	Flexibility definition for DHSs	185
6.3	Identification of flexibility demand and potential in DHSs	188
6.4	Review of the state-of-the-art of flexibility integration	192
6.5	Assignment of flexible technologies to the framework processes	198
6.6	A new, systematic flexibility integration	213
6.7	A specific implementation of metrics for storage tanks	228
6.8	Discussion of the general flexibility results	250
6.9	Conclusion of the flexibility integration	253
7	Thesis conclusion	255
7.1	Level of achievement	255

7.2	Contributions	261
7.3	Boundaries of the work	268
7.4	Recommendations for future research	269
Bibliography		271
A Introduction to theoretical concepts underlying the thesis		309
A.1	Fundamentals of district heating technology	310
A.2	Basics of macroeconomics	321
A.3	Algorithms	327
A.4	Conclusion of the underlying theoretical concepts	329
B Interviews with Danish DH companies		331
B.1	Interview with VEKS	332
B.2	Interview with Fjernvarme Fyn	338
B.3	Interview with HOFOR	341
B.4	Interview with Varmelast	345
C Case study input data		353
C.1	General input data	354
C.2	Case study parameters for the heating plant evaluation	359
C.3	Case study parameters for the flexibility evaluation	370
D Flexibility definitions		375
