

ÍNDICE DE LA TESIS

ABSTRACT	1
RESUMEN	4
RESUM	7
GENERAL INTRODUCTION	11
1. THE EGGPLANT	13
1.1 Taxonomy.....	13
1.2 Botany.....	14
1.3 Eggplant wild relatives.....	16
1.4 Origin and domestication.....	17
1.5 Economic importance.....	18
2. CROP IMPROVEMENT UNDER CLIMATE CHANGE SCENARIOS	22
2.1 Climate change impact on crop production.....	22
2.2 Introgressiomics: a breeding strategy for adapting crops to climate change.....	24
2.3 Speed breeding: a method to accelerate crop research and breeding.....	27
3. USE OF INTROGRESSION POPULATION FOR QTL MAPPING	28
3.1 QTL mapping.....	28
3.2 Linkage mapping and biparental populations.....	29
3.3 Association mapping and multiparental populations.....	31
3.4 MAGIC populations.....	32
3.5 An overview of the main IL populations developed and evaluated.....	35
3.6 An overview of the main MAGIC populations developed and evaluated.....	40
REFERENCES (General introduction)	45
OBJECTIVES	70
RESULTS	74
Chapter 1: Performance of a set of eggplant (<i>Solanum melongena</i>) lines with introgressions from its wild relative <i>S. incanum</i> under open field and screenhouse conditions and detection of QTLs	76
1. Abstract.....	77
2. Introduction.....	77
3. Material and methods.....	79
4. Results.....	84
5. Discussion.....	89
6. Conclusions.....	92

7. Acknowledgements.....	92
8. Additional files.....	93
9. References.....	93
Chapter 2: Fruit shape morphometric analysis and QTL detection in a set of eggplant introgression lines.....	104
1. Abstract.....	105
2. Introduction.....	105
3. Material and methods.....	108
4. Results.....	113
5. Discussion.....	129
6. Conclusions.....	132
7. Acknowledgements.....	133
8. Additional files.....	133
9. References.....	133
Chapter 3: Development of an 8-way multiparent MAGIC population in eggplant.....	143
1. Abstract.....	144
2. Introduction.....	144
3. Material and methods.....	145
4. Results.....	150
5. Discussion.....	154
6. Conclusions.....	155
7. Acknowledgements.....	156
8. References.....	156
GENERAL DISCUSSION.....	163
1. Characterization and QTL identification of morpho-agronomic traits in a set of eggplant interspecific introgression lines.....	165
2. Phenomic analysis and identification of QTLs and candidate genes for fruit shape using a set of eggplant interspecific introgression lines.....	167
3. Development of the first eggplant MAGIC population derived from an interspecific cross of seven accession of <i>S. melongena</i> and one of wild relative <i>S. incanum</i>.....	170
4. Concluding remarks and future perspectives.....	171
GENERAL CONCLUSIONS.....	174
REFERENCES (General Discussion).....	179
