<b>LISTADO DE ARTÍCULOS.....</b>	<b>xxvii</b>
<b>ECUACIONES .....</b>	<b>xxix</b>
<b>ABREVIATURAS Y TÉRMINOS .....</b>	<b>xxxi</b>
<b>LISTADO DE FIGURAS.....</b>	<b>xxxix</b>
<b>LISTADO DE TABLAS.....</b>	<b>xlvii</b>
<b>I. INTRODUCCIÓN .....</b>	<b>1</b>
<b>I.1. Materiales poliméricos y su uso en el sector de envase-embalaje .....</b>	<b>3</b>
I.1.1. Polímeros de alto rendimiento medioambiental.....	6
I.1.2. Polímero de origen no renovable y biodegradables .....	7
I.1.3. Polímeros de origen renovable no biodegradable .....	10
I.1.4. Polímeros de origen renovable y biodegradables.....	13
<b>I.2. Tecnología del bio-poli(etileno) (bio-PE) .....</b>	<b>18</b>
I.2.1. Obtención y estructura del bio-PE .....	18
I.2.2. Características del bio-poli(etileno) (bio-PE) .....	22
I.2.3. Aplicaciones del bio-PE .....	25
<b>I.3. Tecnología de polí(ésteres) .....</b>	<b>27</b>
I.3.2. Tecnología del poli(butilén succinato) (PBS) .....	30
I.3.3. Tecnología del poli(ácido láctico) (PLA) .....	38
<b>I.4. Biopolímeros derivados de estructura proteicas vegetales.....</b>	<b>46</b>
I.4.1. Obtención y estructura de biopolímeros derivados de estructuras proteicas vegetales.....	49
I.4.2. Características de derivados de estructura proteicas vegetales.....	54
<b>I.5. Aditivos naturales en formulaciones de polímeros .....</b>	<b>59</b>
I.5.1. Incorporación de principios activos y componentes de origen renovable..	59
I.5.2. Incorporación de nanocargas .....	65
<b>II. ESTUDIO PREVIO .....</b>	<b>95</b>
<b>II.1. Microencapsulation of copper(II) sulfate in ionically cross-linked chitosan by spray drying for the development of irreversible moisture indicators in paper packaging.....</b>	<b>99</b>
<b>III. OBJETIVOS .....</b>	<b>127</b>
<b>III.1. OBJETIVO GENERAL .....</b>	<b>129</b>
<b>III.2. OBJETIVOS PARCIALES.....</b>	<b>130</b>
<b>IV. RESULTS AND DISCUSSION.....</b>	<b>135</b>
<b>IV.1. High density bio-poly(ethylene) materials with improved properties through the incorporation of natural compounds and fillers. ....</b>	<b>139</b>

IV.1.1. On the use of phenolic compounds present in citrus fruits and grapes as natural antioxidants for thermo-compressed bio-based high-density polyethylene films.....	141
IV.1.2. Manufacturing and characterization of high-density polyethylene composites with active fillers from persimmon peel flour with improved antioxidant activity and hydrophobicity .....	183
IV.1.3. Improved performance of environmentally friendly blends of biobased polyethylene and kraft lignin compatibilized by reactive extrusion with dicumyl peroxide.....	227
<b>IV.2. Biopolymeric materials from poly(ester) matrices combined with natural additives, fillers, and nanofillers.....</b>	<b>261</b>
IV.2.1. Tailoring the properties of thermo-compressed polylactide films for food packaging applications by individual and combined additions of lactic acid oligomer and halloysite nanotubes .....	263
IV.2.2. Peroxide-induced synthesis of maleic anhydride-grafted poly(butylene succinate) and its compatibilizing effect on poly(butylene succinate)/pistachio shell flour composites.....	303
<b>IV.3. Extraction of different biopolymers from agro-industrial residues and their combinations to obtain films.....</b>	<b>353</b>
IV.3.1. Faba bean protein films reinforced with cellulose nanocrystals as edible food packaging material .....	355
IV.3.2. The effect of pine cone lignin on mechanical, thermal and barrier properties of faba bean protein films for packaging applications .....	387
<b>V. CONCLUSIONS.....</b>	<b>417</b>
<b>V.1. PARTIAL CONCLUSIONS .....</b>	<b>419</b>
V.1.1. High-density bio-poly(ethylene) materials with improved properties by incorporating natural compounds and fillers.....	419
V.1.2. Biopolymeric materials from poly(ester) matrices combined with natural additives, fillers, and nanofillers.....	421
V.1.3. Extraction of different biopolymers from agro-industrial residues and their combinations to obtain films. ....	422
<b>V.2. GENERAL CONCLUSION.....</b>	<b>423</b>
