Index	III
List of figures	V
List of tables	VII
Summary Resumen Resum	IX
Summary.....	XI
Resumen.....	XIV
Resum	XVII
General introduction	1
1. RNA interference as a tool for pest control	3
1.1. RNA interference overview	4
1.2. RNAi discovery	4
1.3. Three different pathways of RNA-mediated silencing	5
1.4. dsRNA cell uptake and systemic distribution of the silencing signal	18
1.5. Sources of dsRNAs with insecticidal effect	24
2. Viroids.....	31
2.1. Discovery and possible origin of viroids.....	31
2.2. General structure and phylogenetic classification of viroids	33
2.3. Viroid replication mechanisms.....	36
2.4. Movement of viroids within the plant	43
2.5. Host defense and pathogenesis.....	46
2.6. Host range and symptoms	50
2.7. Transmission between plants and control strategies.....	51
Objectives	55

Chapter I	59
Abstract and Keywords	62
Introduction	63
Materials and methods.....	66
Results	70
Discussion	77
Conflict of interest statement and Funding.....	81
References	81
Chapter II	85
Abstract and Keywords	88
Introduction	89
Results	94
Discussion	104
Materials and methods.....	109
Funding and Disclosure statement.....	113
References	113
Supporting information.....	117
Chapter III	127
Abstract and Keywords	130
Introduction	131
Materials and methods.....	134
Results	140
Discussion	150
Interest statement and Funding.....	154
References	155
Supporting information.....	162
Discussion	175
Conclusions	191
References	195
Acknowledgements Agradecimientos	235

List of figures

General introduction

Figure 1. siRNA pathway in insects	7
Figure 2. miRNA pathway in insects.....	12
Figure 3. piRNA pathway in both, insects' somatic and germline cells	16
Figure 4. Proposed mechanisms of exogenous dsRNA cell-uptake, cell-to-cell and systemic movement in insects	20
Figure 5. Proposed strategies for supplying dsRNAs to insects for RNAi-mediated pest control in the field.....	26
Figure 6. ICTV taxonomic classification of viroids (2020)	34
Figure 7. Structural characteristics of the viroids in the families <i>Pospiviroidae</i> and <i>Avsunviroidae</i>	35
Figure 8. Rolling-circle mechanism in its (A) asymmetric and (B) symmetric variant proposed for the replication of viroids of the families <i>Pospiviroidae</i> in the nucleus and <i>Avsunviroidae</i> in chloroplasts, respectively.....	37
Figure 9. Proposed mechanisms of host defense responses, viroid pathogenesis and intercelular movement.....	45
Figure 10. Typical symptoms of viroid infection in various crops.....	51
Figure 11. Proposed mechanisms of viroid transmission between plants.....	52

Chapter I

Figure 1. Predicted minimum free energy conformation of the monomeric linear ELVd replication intermediate of + polarity.....	70
Figure 2. Predicted minimum free energy conformations of the regions around the ligation site of wild-type ELVd and different mutants	71
Figure 3. Eggplant tRNA ligase-mediated circularization of ELVd punctual substitution mutants in <i>Escherichia coli</i>	72
Figure 4. Circularization of ELVd deletions mutants by eggplant tRNA ligase in <i>E. coli</i>	75
Figure 5. Analysis of eggplant tRNA ligase role in ELVd RNA circularization in <i>E. coli</i>	76

Chapter II

Figure 1. Schematic representation of the pLELVd-DvSSJ1 plasmid and the process for producing dsRNA in <i>E. coli</i>	91
Figure 2. Schematic representation of the double-intron strategy to produce recombinant circular dsRNA in which the ELVd scaffold is removed.....	93
Figure 3. Analysis of <i>DvSSJ1</i> -derived dsRNA produced in <i>E. coli</i>	96

Figure 4. Analysis of the 26S rRNA intron processing in <i>E. coli</i>	98
Figure 5. Recombinant circular dsRNA production in <i>E. coli</i> with the two-intron strategy	101
Figure 6. Recombinant circular dsRNA production in <i>E. coli</i> without tRNA ligase and the ELVd scaffold	103
Supplemental Figure S1. Construction of expression plasmids to produce <i>DvSSJ1</i> -derived dsRNA in <i>E. coli</i>	123
Supplemental Figure S2. Effect of exon size in <i>T. thermophila</i> intron processing in the ELVd-based system to produce dsRNA in <i>E. coli</i>	124
Supplemental Figure S3. Large scale RNA preparations produced in <i>E. coli</i> by means of the viroid-based system and used in the WCR bioassay	124
Supplemental Figure S4. Analysis of the recombinant circular dsRNA.....	125
Supplemental Figure S5. Effect of the the ELVd scaffold and the tRNA ligase on accumulation of a recombinant circular dsRNA	126

Chapter III

Figure 1. Schematic representation of the intron-mediated strategies for the (A) <i>in vitro</i> production hairpin dsRNAs or (B) circular dsRNAs in <i>E. coli</i> against <i>C. capitata</i> genes.....	142
Figure 2. <i>Ceratitidis capitata</i> -specific hairpins produced by <i>in vitro</i> transcription, along with an eGFP control	143
Figure 3. dsRNA injection-based target gene screening for RNAi-mediated control of <i>C. capitata</i>	144
Figure 4. Recombinant circular dsRNAs produced in <i>E. coli</i>	147
Figure 5. Effect of orally-supplied, gene-specific dsRNAs on the accumulation levels of <i>C. capitata</i> ATPsynbeta, V-ATPase, and RPS13 genes.....	149
Supplemental Figure S1. Analysis of the circularity of the recombinant RNA molecules produced in <i>E. coli</i>	170
Supplemental Figure S2. Comparative analysis of recombinant circular dsRNA accumulation in <i>E. coli</i> depending on the promoter that drives transcription.....	171
Supplemental Figure S3. Quantification of the dsRNA preparations obtained in large-scale <i>E. coli</i> cultures	171

Discussion

Figure 12. Proposed mechanism for the circularization of ELVd and other chloroplastic viroids	179
------------------------------------------------------------------------------------------------------------	-----

List of tables

Chapter I

Table 1. Primers used to mutagenize the ELVd cDNA	67
----------------------------------------------------------------	----

Chapter II

Table 1. Insecticidal activity of conventional <i>DvSSJ1 in vitro</i> -transcribed dsRNA (IVT DvSSJ1) and ELVd-DvSSJ1 dsRNA against WCR.....	100
-----------------------------------------------------------------------------------------------------------------------------------------------------	-----

Supplemental Table S1. Primers used in the PCR amplifications to build expression plasmids pLELVd-DvSSJ1, pLELVdPIE-DvSSJ1 and pLPIE-DvSSJ1, and to generate the DNA template for <i>in vitro</i> transcription.....	126
-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-----

Chapter III

Supplemental Table S1. Primers used to construct plasmids for the <i>in vitro</i> and <i>in vivo</i> production of dsRNA against <i>C. capitata</i>	172
------------------------------------------------------------------------------------------------------------------------------------------------------------------	-----

Supplemental Table S2. Primers used to analyze the expression levels of <i>C. capitata</i> targeted genes by RT-qPCR.....	173
----------------------------------------------------------------------------------------------------------------------------------	-----
