

# INDEX

---

<b>Chapter 1. Introduction .....</b>	<b>1</b>
1.1. Background .....	1
1.2. Objectives.....	3
1.2.1. General objective .....	3
1.2.2. Specific objectives.....	3
1.3. Hypothesis and assumptions .....	4
1.4. Organization of the document.....	5
<b>Chapter 2. State of the art .....</b>	<b>7</b>
2.1. Introduction .....	7
2.2. Types and scheme of pumping stations for water distribution networks. ....	8
2.3. Control system configurations .....	11
2.4. Pumping station modelling .....	11
2.5. Pumping station design.....	13
2.6. Multicriteria decision making.....	15
2.7. Conclusions of the state of the art.....	17
<b>Chapter 3. Optimization of control system operation in a pumping station .....</b>	<b>19</b>
3.1. Introduction .....	19
3.2. Methods .....	23
3.2.1. Methodology of pumping control system .....	23
3.2.2. Mathematical formulation.....	25
3.2.3. Process of the optimization methodology.....	29
3.3. Case studies.....	31
3.3.1. TF network .....	31
3.3.2. E1 Network.....	32
3.4. Results and discussions .....	33

***Contributions to the design of pumping stations in water distribution networks considering technical, economic, and environmental aspects***

---

3.4.1. TF network results .....	33
3.4.2. TF network discussion.....	35
3.4.3. E1 network results .....	36
3.4.4. E1 network discussion.....	38
3.5. Conclusions .....	39
<b>Chapter 4. Design of PS considering technical and economic aspects based on the AHP ....</b>	<b>43</b>
4.1. Introduction .....	44
4.2. Materials and methods .....	46
4.2.1. Problem statement .....	46
4.2.2. Required data for pumping station design .....	48
4.2.3. Definition of the techno-economical criteria .....	50
4.2.4. Methodology of analytic hierarchy process (AHP) .....	53
4.3. Case studies.....	58
4.4. Results .....	60
4.5. Discussion.....	67
4.6. Conclusions .....	72
4.7. Appendix Section.....	74
4.7.1. Control system .....	74
4.7.2. Economic factors.....	78
<b>Chapter 5. PS Design considering technical, environmental, and economic criteria based on the AHP method and demand variability .....</b>	<b>81</b>
5.1. Introduction .....	82
5.2. Methods .....	84
5.2.1. Pumping station design statement.....	84
5.2.2. First stage.....	85
5.2.3. Second stage .....	90
5.2.4. Third stage .....	91

5.3.	Applications.....	95
5.3.1.	Case Study.....	95
5.3.2.	Results.....	97
5.3.3.	Discussion.....	102
5.4.	Conclusions .....	104
5.5.	Appendix section.....	105
5.5.1.	Economic criteria .....	105
5.5.2.	AHP method.....	107
5.5.3.	Assessment of Non-quantitative criteria .....	108
<b>Chapter 6.</b>	<b>Case study and discussion .....</b>	<b>111</b>
6.1.	Data of the case study.....	111
6.2.	Results .....	113
6.2.1.	Operating optimization of PS control systems .....	113
6.2.2.	Pumping station design approaches.....	116
6.3.	Discussion.....	123
6.3.1.	Effects of considering the optimization of control system during the process of PS design .....	123
6.3.2.	Effects of considering techno-economic criteria based on AHP in contrast to classic PS design .....	123
6.3.3.	Effects of modifying AHP scale and considering the optimization of control system in a PS design .....	124
6.3.4.	Effects of adding environmental criteria in AHP to technical and economic criteria .....	124
6.3.5.	Effects of considering the variability of daily demands in a PS design. ....	125
<b>Chapter 7.</b>	<b>Conclusions .....</b>	<b>127</b>
7.1.	Introduction .....	127
7.2.	Optimization of control system operation in PS .....	128

***Contributions to the design of pumping stations in water distribution networks considering technical, economic, and environmental aspects***

---

7.3. Design of PS considering technical and economic aspects based on the AHP method	128
7.4. PS design considering technical, environmental and economic criteria based on the AHP method and considering variability of demand.....	129
7.5. Future Developments.....	131
<b>Chapter 8. Quality indicators .....</b>	<b>133</b>
<b>Chapter 9. Abbreviations .....</b>	<b>135</b>
<b>Chapter 10. References .....</b>	<b>137</b>
