Agradecimientos	I
Abstract	III
Preface	IX
Scientific production	XI
Introduction	1
1. Neural Precursor Cells (NPC)	1
2. NPC application potentialities in the Spinal Cord Injury	3
3. Techniques for modulating neural precursor cell development	6
3.1 Techniques based on biochemical modulation	6
3.2. Techniques based on electrostimulation	9
3.3. Techniques based on optogenetic stimulation.....	12
4. Electrochemical techniques	16
4.1. Electrochemical processes in an electrode	16
4.2. Classification of electrochemical methods of measurement	21
4.3. Potentiometry	23
4.4. Voltammetric techniques.....	24
4.5. Reference electrode	30
5. Controlled drug release	32
5.1. Definition	32
5.2. Applications and potential	33
5.3. Classification	36
5.4. Gated mesoporous silica nanoparticles	37
5.5. Drug release stimuli	39
5.6. Electrically CDR (ECDR) for Spinal Cord Injury.....	42
6. Real-time feedback on biochemical systems.....	45

6.1. Biosensor concept	46
6.2. Biosensors based on field-effect transistors (FETs)	46
6.3. Aptamers and aptamer-FET biosensors	47
6.4. Calibrated response of aptamer-FET biosensors.....	48
Objectives of the doctoral thesis	51
Chapter 1. Electronic instrumentation for <i>in vitro</i> electrostimulation and controlled drug release	52
1. Circuits for electrochemical techniques: potentiometric measurement and potentiostat	52
1.1. Electronic systems for potentiometric measurements	52
1.2. Electronic systems for voltammetric measurements	53
1.3. Potentiostat	55
2. Contextualization	61
3. Equipment requirements.....	63
3.1. Electrochemical techniques list: equipment modes of operation	64
3.2. FAEVIS requirements	65
3.3. IVESDRIS requirements.....	65
4. Relay multiplexing system	66
5. FAEVIS: wireless ES & ECDR platform.....	67
5.1. Hardware design	67
5.2. Firmware description	80
5.3. Application description	89
5.4. Final appearance	98
5.5. Reproduction guide	99
6. IVESDRIS: improved ES & ECDR platform.....	100
6.1. Hardware design	101
6.2. Firmware description	108
6.3. Application code in the single board computer	115
6.4. Extension module for stimulus multiplexing.....	117
6.5. Final appearance	118
6.6. Reproduction guide	120
7. Electrical characterization.....	120

7.1. Working electrode voltage measurement accuracy (potentiometry)	120
7.2. Counter-electrode voltage measurement accuracy	121
7.3. Current measurement accuracy	122
7.4. Signal application accuracy.....	122
8. Electrochemical validation	123
9. Conclusions.....	126
Chapter 2. Electrically controlled drug release (ECDR)	127
1. Conceptualization of new ECDR: smart polymer with grafted MSN	128
2. Characterization of the electrochemical bipyridinium-heparin ECDR mechanism.....	129
2.1. Electrochemical characterization of compound C1	130
2.2. Electrochemical characterization of compound C2	138
2.3. Electrochemical characterization of PEDOT:PSS- <i>co</i> -MA with gated MSNs	146
3. Voltage-responsive MSN on PEDOT:PSS- <i>co</i> -MA design and validation	155
3.1. Voltage-responsive MSN	155
3.2. Conductive polymer bearing voltage-responsive MSN	162
3.3. Validation: ECDR on cell culture seeded on the CP-MSN assembly.....	168
4. Further research on ECDR.....	172
4.1. Flexible substrate ECDR	172
4.2. ECDR from metallic and ceramic surfaces.....	174
5. Conclusions.....	181
Chapter 3. Electrostimulation for nervous tissue regeneration <i>in vitro</i>.....	183
1. Electrostimulation on neural precursor cells (NPCs) with conductive substrates	183
1.1. Direct gradient electrical stimulation	185
1.2. Solution gradient electrical stimulation	188
1.3. Dual scaffold electrical stimulation.....	188
1.4. Conceptualization of electrostimulation tools.....	189
2. Extracellular matrix coating.....	191
3. Flexible substrate selection	191
4. Conductive coating selection.....	195
4.1. Hydrogel-based conductive coating	195
4.2. Screen-printed PEDOT:PSS conductive coating.....	197

4.3. Screen-printing layer amount optimization	198
4.4. PEDOT:PSS coating degradation in cell culture conditions.....	198
4.5. Comments on hydrogels.....	200
5. Physical structure for <i>in vitro</i> experimentation	200
5.1. 3D-printed PLA 24-well matrix.....	201
5.2. PDMS 24-well matrix obtained with 3D-printed PLA negative.....	202
5.3. PDMS single well obtained with 3D-printed ABS negative	202
5.4. 3D-printed simplified well-duo	203
5.5. 3D-printed PLA well matrixes with additive silicone	205
5.6. Commercial well matrix without bottom.....	207
5.7. Screen-printed PET immersed in commercial cell culture well.....	207
6. Plasma treatment to enhance cell attachment and viability	208
7. Electrostimulation assays	210
7.1. Electrostimulation on 3D-printed well-duo with FAEVIS.....	210
7.2. Electrostimulation on PDMS varnished well-duo and immersed setups with IVESDRIS	212
7.3. Electrostimulation on immersed setups with IVESDRIS	215
7.4. Electrostimulation on immersed setup with Ar plasma activated PEDOT:PSS.....	217
8. Conclusions and next steps.....	219
Chapter 4. Optogenetic stimulation for nervous tissue regeneration	221
1. Background.....	222
2. Device specifications	223
3. Conceptualization	224
4. OSIVE Slim: matrix for 24-well <i>in vitro</i> optogenetic stimulation	225
4.1. Antecedents	226
4.2. Microscope considerations	227
4.3. Hardware design	227
4.4. Firmware description	236
4.5. PC Graphic User Interface description	238
4.6. Final appearance	240
4.7. Reproduction guide	241
5. OSIVE IMS: Irradiance measurement system.....	241
5.1. Hardware design.....	242

5.2. Firmware description	247
5.3. PC Graphic User Interface description	249
5.4. Final appearance	251
5.5. Reproduction guide	252
6. OSIVE Slim characterization	253
7. OSIVE Slim experimental validation	253
8. Conclusions	256
Chapter 5. Biosensors for real-time multiple measurement.....	257
1. Instrumentation state of the art	258
2. Research line background	260
3. Device specifications	266
4. Simultaneous measurement with spatial proximity.....	268
4.1. Common-source topology limitations	269
4.2. Common-gate topology proposal.....	270
5. BioFET array design	271
6. MBMS: multiple bio-FET measurement system.....	272
6.1. Hardware design	273
6.2. Firmware description	287
6.3. Application code for the PC Graphic User Interface.....	293
6.4. Application code for the PC Data Analysis Tool.....	299
6.5. Electrical validation of MBMS vs. Keithley 4200A-SCS Semiconductor Characterizer	306
6.6. Final appearance	307
6.7. Reproduction guide	309
7. Validation.....	309
7.1. Simultaneous pH measurement in microfluidic system	310
7.2. Preliminary measurement of neurotransmitters.....	312
8. Miniaturized FET array electrical response.....	314
9. Conclusions and next steps	316
Conclusions.....	320

Future lines of research 323

References..... 326

Annexes..... i

Annex 01. FAEVIS Schematic 1/2 ii
Annex 02. FAEVIS Schematic 2/2 iii
Annex 03. FAEVIS' Bluetooth Low Energy communications iv
Annex 04. IVESDRIS's MBSI Schematic 1/5 viii
Annex 05. IVESDRIS's MBSI Schematic 2/5 ix
Annex 06. IVESDRIS's MBSI Schematic 3/5 x
Annex 07. IVESDRIS's MBSI Schematic 4/5 xi
Annex 08. IVESDRIS's MBSI Schematic 5/5 xii
Annex 09. IVESDRIS' SCB Shield Schematic xiii
Annex 10. OSIVE Slim Schematic 1/2..... xiv
Annex 11. OSIVE Slim Schematic 2/2..... xv
Annex 12. OSIVE Slim DUE-Shield Schematic xvi
Annex 13. OSIVE IMS Schematic..... xvii
Annex 14. MBMS Schematic (1/8) xviii
Annex 15. MBMS Schematic (2/8) xix
Annex 16. MBMS Schematic (3/8) xx
Annex 17. MBMS Schematic (4/8) xxi
Annex 18. MBMS Schematic (5/8) xxii
Annex 19. MBMS Schematic (6/8) xxiii
Annex 20. MBMS Schematic (7/8) xxiv
Annex 21. MBMS Schematic (8/8) xxv
