|--|--------------|
| INDEX | I |
| List of figures | V |
| List of tables..... | XI |
| Glossary..... | XII |
| Abstract | XVII |
| Resumen..... | XVIII |
| Resum..... | XIX |
| Introduction | 1 |
| 1. The muscular system..... | 1 |
| 1.1. The skeletal muscle: structure and organization..... | 1 |
| 1.2. Cell populations in the adult skeletal muscle | 2 |
| 2. Muscle contraction: structural basis | 4 |
| 2.1. Excitation-contraction coupling | 4 |
| 3. Muscle regeneration..... | 5 |
| 3.1. Tissue necrosis..... | 5 |
| 3.2. Inflammatory phase: response to injury | 6 |
| 3.3. Anti-inflammatory phase: regenerative process..... | 7 |
| 3.4. Remodelling phase and functional recovery | 7 |
| 4. Muscle tissue engineering | 8 |
| 4.1. <i>In vivo</i> MTE | 9 |
| 4.2. <i>In situ</i> MTE | 10 |
| 4.3. <i>In vitro</i> MTE | 10 |
| 4.4. Cell sources for skeletal muscle tissue engineering | 12 |
| 4.5. Bioactive molecules in skeletal muscle tissue engineering | 12 |
| 4.6. Biomaterials in skeletal muscle tissue engineering..... | 13 |
| 4.6.1. <i>Polyhydroxyalkanoates</i> | 15 |
| 4.6.2. <i>Polycaprolactone</i> | 16 |
| 4.6.3. <i>Poly (vinyl alcohol)</i> | 17 |
| 4.6.4. <i>Alginate</i> | 17 |
| 5. Conductive biomaterials for muscle tissue engineering..... | 19 |
| 5.1. Conductive polymers | 19 |
| 5.2. Carbon nanomaterials | 20 |
| 5.3. Metal nanomaterials | 21 |

| | |
|--|-----------|
| Hypothesis and objectives | 25 |
| 1. Hypothesis | 25 |
| 2. Objectives..... | 26 |
| Chapter 1 | 27 |
| Novel semi-interpenetrated polymer networks of poly(3-hydroxybutyrate-co-3-hydroxyvalerate)/poly (vinyl alcohol) with incorporated conductive polypyrrole nanoparticles | 28 |
| 1. Introduction..... | 29 |
| 2. Materials and methods | 31 |
| 2.1. Materials | 31 |
| 2.2. Preparation of neat polymers and 30/70 PHBV/PVA blend films | 32 |
| 2.3. Preparation of PHBV/PVA semi-IPN (PVA crosslinking) | 32 |
| 2.4. Electroconductive particles embedding..... | 32 |
| 2.5. Characterisation technique..... | 33 |
| 2.5.1. Electron microscopy..... | 33 |
| 2.5.2. Fourier Transformed Infrared Spectroscopy (<i>FTIR</i>) | 33 |
| 2.5.3. Swelling assay | 33 |
| 2.5.4. Surface wettability..... | 34 |
| 2.5.5. Differential Scanning Calorimetry (<i>DSC</i>) | 34 |
| 2.5.6. Thermogravimetric Analysis (<i>TGA</i>)..... | 34 |
| 2.5.7. Conductivity Analysis | 34 |
| 2.6. Cell culture and biological evaluation | 35 |
| 2.6.1. Cytotoxicity..... | 35 |
| 2.6.2. Cell adhesion | 35 |
| 2.7. Statistical analysis | 36 |
| 3. Results and discussion | 36 |
| 3.1. Microstructure and Fourier Transform Infrared Spectroscopy | 36 |
| 3.2. Swelling properties and surface wettability | 40 |
| 3.3. Thermal properties | 42 |
| 3.3.1. Differential Scanning Calorimetry (<i>DSC</i>) | 42 |
| 3.3.1.1. PHBV/PVA blends and semi-IPN PHBV/PVA..... | 42 |
| 3.3.1.2. Semi-IPN PHBV/PVA with PPy..... | 45 |
| 3.3.2. Thermal degradation properties..... | 46 |
| 3.3.2.1. PVA/PHBA blend and PHBV/PVA semi-IPN | 47 |
| 3.3.2.2. PPy nanoparticles in the semi-IPN thermal degradation | 48 |
| 3.4. Electrical behaviour | 49 |
| 3.5. Biological evaluation..... | 49 |
| 4. Conclusions | 51 |
| 5. Patents | 51 |
| 6. Acknowledgments..... | 51 |
| 7. References | 52 |

| | |
|---|-----------|
| Chapter 2 | 61 |
| Electroactive calcium-alginate/polycaprolactone/reduced graphene oxide nanohybrid hydrogels for skeletal muscle tissue engineering | 62 |
| 1. Introduction..... | 63 |
| 2. Materials and methods | 64 |
| 2.1. Materials | 64 |
| 2.2. Fabrication of crosslinked SA and semi-IPN SA/PCL 90/10..... | 64 |
| 2.3. Production of electroactive SA/PCL semi-IPN with embedded rGO nanosheets.. | 65 |
| 2.4. Characterization techniques..... | 65 |
| 2.4.1. <i>Electron Microscopy.</i> | 65 |
| 2.4.2. <i>Atomic Force Microscopy.</i> | 66 |
| 2.4.3. <i>Fourier Transformed Infrared Spectroscopy (FTIR)</i> | 66 |
| 2.4.4. <i>Swelling assay</i> | 66 |
| 2.4.5. <i>Surface wettability.....</i> | 66 |
| 2.4.6. <i>Differential Scanning Calorimetry (DSC)</i> | 66 |
| 2.4.7. <i>Thermogravimetric Analysis (TGA).....</i> | 66 |
| 2.4.8. <i>Mechanical properties</i> | 66 |
| 2.4.9. <i>Electrical properties.....</i> | 67 |
| 2.5. Cell culture and biological characterization..... | 67 |
| 2.5.1. <i>Cytotoxicity.....</i> | 67 |
| 2.5.2. <i>Cell adhesion</i> | 68 |
| 2.5.3. <i>Myogenic differentiation</i> | 68 |
| 2.6. Statistical analysis | 68 |
| 3. Results and Discussion..... | 69 |
| 3.1. Microstructure..... | 69 |
| 3.2. Fourier Transform Infrared Spectroscopy | 70 |
| 3.3. Swelling and surface wettability | 72 |
| 3.4. Thermal and mechanical properties | 73 |
| 3.4.1. <i>Differential Scanning Calorimetry (DSC)</i> | 73 |
| 3.4.2. <i>Thermogravimetry analysis (TGA)</i> | 75 |
| 3.4.3. <i>Mechanical properties</i> | 75 |
| 3.5. Electrical conductivity | 76 |
| 3.6. Biocompatibility..... | 76 |
| 3.7. Myoblast adhesion on semi-IPN SA/PCL-E and nanohybrid hydrogels | 76 |
| 3.8. Myoblast differentiation on semi-IPN SA/PCL-E and nanohybrid hydrogels | 78 |
| 4. Conclusions | 80 |
| 5. Acknowledgements..... | 80 |
| 6. References | 80 |

| | |
|---|------------|
| Chapter 3 | 89 |
| Pro-myogenic environment promoted by the synergistic effect of conductive polymer nanocomposites combined with extracellular zinc ions | 90 |
| 1. Introduction..... | 91 |
| 2. Materials and methods | 93 |
| 2.1. Materials | 93 |
| 2.2. Preparation of conductive cell substrates | 93 |
| 2.3. Morphological and physicochemical characterization of conductive cell substrates..... | 93 |
| 2.4. Biological Evaluation | 94 |
| 2.4.1. <i>Cell Culture</i> | 94 |
| 2.4.2. <i>Cytotoxicity</i> | 95 |
| 2.4.3. <i>Cell Adhesion</i> | 95 |
| 2.4.4. <i>Proliferation</i> | 96 |
| 2.4.5. <i>Myogenic Differentiation</i> | 96 |
| 2.4.6. <i>Gene Expression Analysis</i> | 96 |
| 2.5. Statistical analysis | 97 |
| 3. Results..... | 97 |
| 3.1. Morphology and physicochemical Properties of PCL/G Nanocomposites | 97 |
| 3.1.1. <i>Morphology</i> | 97 |
| 3.1.2. <i>Thermal properties and degradation</i> | 98 |
| 3.1.3. <i>Mechanical and electrical properties</i> | 98 |
| 3.2. Biological performance | 99 |
| 3.2.1. <i>Effect of a conductive surface and exogeneous Zn ions on biocompatibility and cell adhesion</i> | 99 |
| 3.2.2. <i>Effect of a conductive surface and exogeneous Zn²⁺ ions on myoblast proliferation and differentiation.....</i> | 100 |
| 4. Discussion..... | 102 |
| 5. Conclusions | 106 |
| 6. Acknowledgments..... | 107 |
| 7. Supplementary information..... | 107 |
| 8. References | 108 |
| Discussion..... | 117 |
| Future perspectives | 123 |
| Scientific contributions | 125 |
| 1. Publications in scientific journals..... | 125 |
| 2. Intellectual property | 126 |
| 3. International conferences..... | 126 |
| 4. Academic contributions | 127 |
| References | 129 |
