Resumen xi

Resum xiii

I Introduction 1

1 Medical Imaging 3

1.1 Medical Imaging history 3

1.2 Anatomical imaging 4

1.2.1 Radiography 5

1.2.2 Computed Tomography 5

1.2.3 Magnetic Resonance Imaging 5

1.3 Molecular Imaging 6

1.3.1 Gamma camera 8

1.3.2 Single Photon Emission Computed Tomography 8

1.3.3 Positron Emission Tomography 9

1.4 Multimodality imaging techniques 9

2 Positron Emission Tomography 13

2.1 PET history 13

2.2 PET basics 16

2.2.1 Positron emission and annihilation 16

2.2.2 Coincidence detection 17

2.2.2.1 Physical effects limiting image performance 19

2.2.2.2 Image degradation caused by coincidence detection method 20

2.2.2.3 Role of Time of Flight (TOF) 21

2.3 Physical principles 21

2.3.1 Scintillator 21

2.3.1.1 Pixelated scintillators 25

2.3.1.2 Monolithic scintillators 26

2.3.1.3 Semi-monolithic scintillators 29

2.3.2 Surface treatment of the scintillator 29

2.3.3 Photodetector 31

2.3.3.1 Photomultiplier tube 32

2.3.3.2 Solid-state photodetectors 33

2.3.4 Front-end electronic system 36

2.3.4.1 Projection readout circuit 37

2.3.5 Performance of PET detectors 37
2.4 PET image reconstruction and corrections 39
2.5 PET system performance 41
2.6 State-of-the-art PET systems 41
2.6.1 Whole Body PET systems 42
2.6.2 Total-Body PET systems 43
2.6.3 Organ-dedicated PET systems 44
2.6.4 Preclinical PET systems 44
2.7 Artificial Intelligence in PET 45
3 Position estimation and calibration in monolithic-based PET detectors 49
3.1 Position estimation methods 49
3.1.1 Analytical methods 53
3.1.1.1 Center of Gravity (CoG) method 53
3.1.1.2 Raise to the Power (RTP) 54
3.1.1.3 DOI estimators 54
3.1.2 Fitting methods based on physical or parametric LD models 55
3.1.2.1 Parametric model of the LD 56
3.1.2.2 Physical model of the LD 56
3.1.3 Statistical methods 56
3.1.3.1 Maximum Likelihood Estimator 57
3.1.3.2 Least Squares 58
3.1.3.3 Nearest Neighbor 58
3.1.4 Machine Learning methods 59
3.1.4.1 Support Vector Machines 60
3.1.4.2 Gradient Tree Boosting 60
3.1.4.3 Artificial Neural Networks: Multilayer Perceptron 62
3.1.4.4 Convolutional Neural Networks 65
3.2 Calibration methodology of PET systems 66
II Objectives and contribution to PET technique 71
4 Contribution to position estimation and calibration procedures 73
5 Contribution to research projects 79
5.1 ProsPET 79
5.2 ScintoTube 81
5.3 DeepBreast 83
III Scientific Research 87
6 Calibration of gamma ray impacts in monolithic-based detectors using Voronoi diagrams 89
7 Reducing Calibration Time in PET Systems Based on Monolithic Crystals .. 115
8 Experimental validation of a rodent PET scanner prototype based on a single LYSO crystal tube 133

9 Performance evaluation of side-by-side optically coupled monolithic LYSO crystals 157

IV Discussion 175

V Conclusions 183

Bibliography 185

Contributions published during the course of the PhD thesis 201

Participation in conferences during the course of the PhD thesis 205
