Introduction	1
1 Linear recurrence: the state of the art	6
2 Hypercyclicity, recurrence and Furstenberg families	9
3 Ergodicity and measure preserving systems	13
4 The $T \oplus T$ -type problems	18
5 Lineability, dense lineability and spaceability	21
1 Frequently recurrent operators	25
1 Introduction	26
2 Recurrence, hypercyclicity, and the size of the set of recurrent vectors	28
3 Recurrence and power-boundedness	33
4 Recurrence, the unit circle, and the spectrum	36
5 Recurrence of weighted backward shift operators	41
6 \mathcal{IP}^* -recurrence	44
7 Recurrence and unimodular eigenvectors	46
8 \mathcal{F} -recurrence	50
References	52
2 Recurrence properties for linear dynamical systems: An approach via invariant measures	55
1 Introduction and main results	56
2 Invariant measures from reiterative recurrence	64
3 From reiterative to frequent recurrence	69
4 From uniform recurrence to unimodular eigenvectors	72
5 Product dynamical systems	78
6 Inverse dynamical systems	82
7 How typical is a reiteratively recurrent operator?	84
8 Open problems	86
References	88

3	Questions in linear recurrence: From the $T \oplus T$-problem to lineability	91
1	Introduction	92
2	Quasi-rigid dynamical systems	94
3	Existence of recurrent but not quasi-rigid operators	100
4	Furstenberg families for pointwise recurrence	108
5	Infinite-dimensional vector spaces in $\mathcal{F}\text{Rec}(T)$	118
6	Open problems	127
