

## Table of contents

How do cooperation and scientific research influence drug development? The case of cancer disease .....	1
Acknowledgements .....	5
Abstract .....	7
Resumen .....	9
Resum .....	11
Chapter 1 Introduction .....	13
Chapter 2 What we know about clinical trials from Innovation Studies: a systematic literature review .....	20
2.1 Introduction .....	21
2.2 Scope of the literature review .....	23
2.3 Principal topic areas .....	26
2.3.1 Commercialisation .....	28
2.3.2 Scientific knowledge production .....	35
2.3.3 Knowledge transfer .....	38
2.3.4 Institutional frameworks .....	39
2.3.5 Data gathering computer tools .....	44
2.4 Discussion .....	45
2.4.1 Potential suggestions for theoretical research .....	45
2.4.2 Potential suggestions for empirical research .....	49
2.4.3 Potential suggestions for data gathering computer tools .....	58
2.5 A brief overview of the literature on drug development outside Innovation Studies, with a focus on emerging trends in the analysis of clinical trials .....	59
2.6 Conclusions and limitations .....	61
Chapter 3 Success of drug development for cancer diseases: radicalness and network density .....	66
3.1 Introduction .....	67
3.2 Literature review and hypotheses .....	70
3.2.1 Radicalness and success of drug development .....	70
3.2.2 Research co-operation network density and success of drug development .....	72

3.2.3 Research co-operation network density and the relationship between radicalness and the success of drug development.....	72
3.3 Model, data and methodology.....	73
3.3.1 Data sources.....	73
3.3.2 Normalisation of organisation names.....	75
3.3.3 Building the sample and subsamples.....	78
3.3.4 Variables.....	85
3.4 Descriptive statistics.....	89
3.4.1 Descriptive statistics of key variables.....	89
3.4.2 Descriptive statistics by organisation type.....	91
3.4.3 Descriptive statistics by network density.....	95
3.4.4 Descriptive breakdown by chemical, biomedical and mixed organisations subsamples.....	96
3.5 Results.....	98
3.5.1 Main results.....	100
3.5.2 Robustness test.....	104
3.6 Conclusions, implications and future research.....	106
3.6.1 Conclusions.....	106
3.6.2 Implications for theory and practice.....	107
3.6.3 Limitations and future research.....	108
Chapter 4 Applied research to develop cancer drugs, basic research to succeed.....	110
4.1 Introduction.....	111
4.2 Literature review and hypotheses.....	113
4.2.1 Basicness of scientific research.....	114
4.2.2 Scientific impact of research.....	115
4.2.3 Drug development workflow: engagement and success.....	116
4.2.4 The direct effect of the basicness and the scientific impact of research on engagement in drug development.....	117
4.2.5 The direct effect of the basicness and the scientific impact of research on success in drug development.....	118

4.2.6 The spillover effect of the basicness and the scientific impact of research on success in drug development .....	120
4.3 Model, data and methodology .....	121
4.3.1 Data sources .....	121
4.3.2 Building the sample and sub-samples .....	123
4.3.3 Variables .....	124
4.4 Descriptive statistics .....	127
4.4.1 Descriptive statistics by organisation type .....	127
4.4.2 Descriptive statistics of key variables .....	129
4.4.3 Descriptive statistics of Top 10 organisations .....	134
4.5 Model selection .....	136
4.5.1 Spatial weights matrix .....	137
4.5.2 Spatial autocorrelation analysis .....	137
4.5.3 Spatial Durbin model .....	138
4.6 Results and robustness test .....	139
4.6.1 Main results .....	141
4.6.2 Robustness check .....	145
4.7 Conclusions .....	148
Chapter 5 .....	151
Conclusions .....	151
References .....	160
Appendix .....	187
