Abstract vii

Resumen ix

Resum xi

List of acronyms 1

1 Introduction 3
- 1.1 Motivation and background . . . 5
- 1.2 Objectives . . . 6
- 1.3 Organization and development of the Thesis . . . 7

2 Fundamentals: modelling of acoustic problems and optimization techniques 11
- 2.1 The acoustic problem . . . 13
  - 2.1.1 Introduction . . . 13
  - 2.1.2 Models for the acoustic calculation . . . 13
    - 2.1.2.1 Dynamic model . . . 13
    - 2.1.2.2 Linear acoustic model . . . 15
  - 2.1.3 Wave equation . . . 16
    - 2.1.3.1 Non-moving medium . . . 18
    - 2.1.3.2 Moving medium . . . 19
  - 2.1.4 One-dimensional acoustics of ducts . . . 20
    - 2.1.4.1 Non-moving medium . . . 20
    - 2.1.4.2 Moving medium . . . 21
  - 2.1.5 Plane wave models. Matrix representations . . . 22
    - 2.1.5.1 Generalities . . . 23
    - 2.1.5.2 Transfer matrix of a duct . . . 24
    - 2.1.5.3 Transfer matrix at expansions and contractions 26
- 2.2 The fluid-structure interaction problem . . . 27
  - 2.2.1 Displacement/pressure mixed formulation in 2D . . . 29
- 2.3 Structural shape optimization . . . 30

2.3.1 Introduction . . . 30
2.3.2 Optimization algorithms . . . 31
2.3.2.1 Method of moving asymptotes (MMA) . . . 32
2.3.2.2 Sensitivity analysis . . . 33
2.3.2.3 Genetic algorithms . . . 35
2.3.3 Topology optimization . . . 37
2.3.3.1 Material interpolation schemes . . . 38

3 Acoustic optimization of dissipative and hybrid mufflers 39
3.1 Introduction . . . 41
3.1.1 Classification of mufflers . . . 41
3.1.1.1 Reactive configuration . . . 41
3.1.1.2 Dissipative configuration . . . 42
3.1.2 Optimization of mufflers . . . 42
3.1.2.1 Optimization of reactive mufflers . . . 42
3.1.2.2 Optimization of dissipative and hybrid mufflers 43
3.2 Acoustic modelling of reactive and dissipative mufflers . . . 44
3.2.1 Previous considerations: perforated ducts and absorbing materials . . . 44
3.2.1.1 Characteristic impedance of a perforated surface 44
3.2.1.2 Absorbent materials . . . 47
3.2.2 Finite element method . . . 48
3.2.2.1 Wave propagation along the central passage domain Ω_a . . . 50
3.2.2.2 Wave propagation in the dissipative chamber Ω_m . . . 52
3.2.2.3 Acoustic coupling at the perforated duct . . . 53
3.2.2.4 Boundary conditions at the outlet . . . 54
3.2.2.5 Final system of equations . . . 55
3.3 Objective Function: Transmission loss . . . 55
3.4 Optimization problem . . . 57
3.5 Results . . . 58
3.5.1 Temperature distribution . . . 58
3.5.2 Multi-frequency topology optimization of a dissipative muffler . . . 59
3.5.2.1 Design 1. Cold condition optimization. Low frequency range . . . 60
3.5.2.2 Design 1a. Manufacturable muffler with $\rho_b = 50$ kg/m^3 and extended ducts . . . 61

3.5.2.3 Results discussion. Designs 1 and 1a 62
3.5.2.4 Design 2. Cold condition optimization. Mid frequency range 62
3.5.2.5 Design 2a. Manufacturable muffler with a ring design 64
3.5.2.6 Design 2b. Manufacturable muffler with a ring design and extended ducts 65
3.5.2.7 Design 3. Operating (hot) condition optimization. Middle frequency range 65
3.5.2.8 Results discussion. Designs 2, 2a, 2b and 3 . . 66
3.5.3 Multi-frequency shape optimization of a hybrid muffler with multiple constraints 69
3.5.3.1 Design 4. Broad frequency range 69
3.5.3.2 Results discussion. Design 4 70
3.6 Conclusions 72

4 Acoustic optimization of exhaust aftertreatment devices 73
4.1 Introduction 75
4.2 Acoustic modelling of aftertreatment devices 75
4.2.1 Catalytic converter 76
4.2.1.1 1-D acoustic modelling of the monolith 77
4.2.2 Diesel particulate filters 79
4.2.2.1 The 1-D wave model 80
4.2.2.2 The in- and oulet sections (IN+I and III+OUT) 81
4.2.2.3 The filter section (II) 82
4.2.3 Modal expansion method 84
4.2.4 Mode matching technique 85
4.2.4.1 Mode matching at the device expansion 85
4.2.4.2 Transfer matrix of the monolith 86
4.2.4.3 Mode matching at the device contraction . . . 87
4.2.4.4 Final system of equations 87
4.3 Objective function: Transmission loss 88
4.4 Optimization problem 88
4.5 Results 88
4.5.1 Design 1. Shape optimization of a catalytic converter . 89
4.5.1.1 Influence of duct offsets 91
4.5.2 Design 2. Shape optimization of a diesel particulate filter 93
4.6 Conclusions 98

5 Topology optimization of fluid-structure problems 101
5.1 Introduction . . . 103
5.2 Vibroacoustic modelling of a fluid-structure interaction problem 104
5.2.1 Mixed finite element method in Ω_d . . . 105
5.2.2 Helmholtz equation in Ω_a . . . 106
5.2.3 Subdomain coupling . . . 108
5.2.4 Absorbing boundary Γ_o . . . 109
5.3 Two-material interpolation schemes of vibroacoustic properties 109
5.4 Objective function . . . 111
5.4.1 Acoustic contribution . . . 111
5.4.2 Static load case . . . 112
5.5 Optimization problem . . . 112
5.5.1 Stopping criteria . . . 113
5.6 Results . . . 113
5.6.1 Material properties . . . 113
5.6.2 Design 1. Duct screen . . . 114
5.6.3 Design 2. Duct shielding . . . 116
5.6.4 Design 3. Train fairing . . . 120
5.7 Conclusions . . . 123

6 Conclusions 125

7 Further publications 129
7.1 International journals (JCR) . . . 129
7.2 National congresses . . . 129
7.3 International congresses . . . 130
