

# Contents

- 1 Introduction** **1**
  - 1.1 Preterm birth . . . . . 1
    - 1.1.1 Origin, prevalence and relevance . . . . . 1
    - 1.1.2 Current methods of predicting preterm delivery . . . . . 2
  - 1.2 Electrohysterography for predicting preterm births . . . . . 5
  - 1.3 Machine learning . . . . . 8
    - 1.3.1 The application of machine learning in EHG signals to predict the preterm labor . . . . . 8
    - 1.3.2 Dimensionality reduction methods . . . . . 10
    - 1.3.3 Resampling Methods for Imbalanced Data Learning . . . . . 13
    - 1.3.4 Performance Metrics for Predicting Preterm Labor . . . . . 15
  - 1.4 State of the art of preterm delivery prediction using EHG signals . . . 18
    - 1.4.1 Studies with no strategy to deal with imbalanced data learning 19
    - 1.4.2 Resampling techniques for imbalanced data learning . . . . . 19
    - 1.4.3 Matching the composition of the preterm and term database . 22
  - 1.5 References . . . . . 25
  
- 2 Scope of the Study** **37**
  - 2.1 Hypothesis . . . . . 38
  - 2.2 General objective . . . . . 38
  - 2.3 Specific objectives . . . . . 38
  - 2.4 References . . . . . 39
  
- 3 Optimized Feature Subset Selection Using Genetic Algorithm for Preterm Labor Prediction Based on Electrohysterography** **41**
  - 3.1 Introduction . . . . . 42
  - 3.2 Materials and Methods . . . . . 43
    - 3.2.1 Database . . . . . 43
    - 3.2.2 EHG Signal Characterization . . . . . 44
    - 3.2.3 Classifier Design and Evaluation . . . . . 46
  - 3.3 Results . . . . . 49
  - 3.4 Discussion . . . . . 55

3.5	Conclusions . . . . .	58
3.6	References . . . . .	59
<b>4</b>	<b>Assessment of Dispersion and Bubble Entropy Measures for Enhancing Preterm Birth Prediction Based on Electrohysterographic Signal</b>	<b>65</b>
4.1	Introduction . . . . .	66
4.2	Materials and Methods . . . . .	69
4.2.1	Database Description . . . . .	69
4.2.2	EHG Signal Analysis . . . . .	69
4.2.3	Classifier Design and Evaluation . . . . .	72
4.3	Results . . . . .	75
4.4	Discussion . . . . .	79
4.5	Conclusions . . . . .	83
4.6	References . . . . .	83
<b>5</b>	<b>Combination of Feature Selection and Resampling Methods to Predict Preterm Birth Based on Electrohysterographic Signals from Imbalance Data</b>	<b>91</b>
5.1	Introduction . . . . .	92
5.1.1	Preterm Labor . . . . .	92
5.1.2	Electrohysterography for Preterm Labor Prediction . . . . .	93
5.1.3	Resampling Methods for Imbalance Data Learning . . . . .	94
5.2	Materials and Methods . . . . .	95
5.2.1	Database Description . . . . .	95
5.2.2	EHG Signal Analysis . . . . .	96
5.2.3	Classifier Design and Evaluation . . . . .	97
5.3	Results . . . . .	103
5.4	Discussion . . . . .	108
5.4.1	Imbalanced Data Learning . . . . .	108
5.4.2	Preterm Labor Prediction System . . . . .	110
5.4.3	Limitations, Future Works and Practical Implications . . . . .	111
5.5	Conclusions . . . . .	111
5.6	References . . . . .	112
<b>6</b>	<b>General Discussion</b>	<b>121</b>
6.1	EHG characterization . . . . .	121
6.1.1	Analysis of temporal and spectral EHG features . . . . .	121
6.1.2	Analysis of non-linear EHG features . . . . .	122
6.1.3	Analysis of synchronization EHG features . . . . .	123
6.2	Overcoming the curse of dimensionality . . . . .	124
6.2.1	Effective feature selection strategies for preterm labor prediction	124

6.2.2	Genetic algorithm and imbalanced datasets: tailoring feature selection for preterm birth prediction . . . . .	125
6.3	Imbalanced data learning for a preterm labor prediction system: challenges and perspectives . . . . .	127
6.3.1	Resampling before partitioning in preterm labor prediction from EHG signals . . . . .	127
6.3.2	Partitioning before resampling in preterm labor prediction from EHG signals . . . . .	128
6.4	Limitations and future work . . . . .	129
6.5	References . . . . .	132
<b>7</b>	<b>Conclusions</b>	<b>143</b>
