Abstract	5
Resumen	6
Resum	7
1 Introduction and state of art	9
2 Preliminaries and previous concepts	14
2.1 Notions of Tensor Calculus	14
2.1.1 Algorithms based on tensor decompositions	16
2.2 Some Lie Algebra concepts	17
2.3 About Graphs and Small World Networks	17
3 Structure and approximation properties of Laplacian-like matrices	19
3.1 Introduction	20
3.2 The algebraic structure of Laplacian-Like matrices	22
3.3 A decomposition of the linear space of Laplacian-like matrices . . .	28
3.4 A Numerical Strategy to perform a Laplacian-like decomposition .	32
3.4.1 Numerical Examples	34
3.5 Conclusions	38
4 On the tensor approximation of Watts–Strogatz networks	41
4.1 Introduction	42
4.2 Regular networks and the Watts–Strogatz networks	43
4.3 The best tensor based decomposition	46
4.3.1 Tensor decomposition of Watts-Strogatz networks	47
4.4 Results analysis	50
4.5 Conclusions	53
5 A pre-processing method for the implementation of the GROU	57
5.1 Introduction	58
5.2 Preliminary definitions and results	59
5.2.1 Greedy Rank-One Update Algorithm	60
5.3 On the best Laplacian matrix approximation	63
5.4 The best Laplacian approximation for the discretization of a second order PDEs without mixing derivatives	70
5.5 Numerical examples	72
5.5.1 The Helmholtz equation	73

5.5.2	The Swift-Hohenberg equation	75
5.6	Conclusions	76
6	Conclusions	79
7	References	81
